Cluster Selection Brief

Three sections. Section 1 records who sits in each industry. Section 2 scores the sixteen brochure tools. Section 3 picks five year-1 vehicles. Rank is not the pick.

MSME Catalyst · Working paper for Gate-1 Capability Centre selection · 5 November 2026 · Sources are the two canvases named in section 1.7, plus the official series listed there. Word is the master. The PDF is the print copy. Desk date is 5 November 2026 (Asia/Kolkata). The export year is FY2024–25.

Section	Question	Source
1. Identified clusters	Who is in the industry, and does it have a cluster shape?	Canvas A. Fit is the cluster-shape score, 1 to 5.
2. Charter rank	How badly does this industry need the sixteen tools?	Canvas B. Overall is the charter score. It is not fit.
3. Year-1 pick	Where does one year of centre capacity go?	Both canvases. Five vehicles. Three new centres and two attachments.

Cluster-shape fit and the charter score are kept apart on purpose. A thick Micro and Small tail can still be a poor charter fit, and a high charter score can still be delivered as an attachment to a centre that already exists. Fintech, edtech, cybersecurity and green hydrogen are out of charter even when the arithmetic would leave them on Watch.

1. Identified clusters, methodology and data

1.1 Methodology

The universe is 31 industry types that were funded or newly gated between 2011 and 2026. The ids are stable. They are the same on both canvases. This paper does not add a 32nd type, and it does not reopen the older textiles and apparel demonstration as a separate row. Technical textiles are the new textile wave.

ICAM status is a closed list, not a judgement made in this paper. Demonstration (4): defence, drones, white goods and furniture, and food. Named Phase II (8): electronics, electric vehicles, solar, IT and ITeS, healthtech, edtech, logistics, and fintech. Everything else is a new candidate (19). A demonstration or a named Phase II type is not briefed as a new discovery. Where one of those types is still the right year-1 use of the charter, the form is an attachment.

Participants are a unit of count, and the unit is named on each row. A member list, a licence list, a scheme-approval list and a factory list are not added together. Geography is the belt a centre could actually sit in. Mode is Traditional, Digital or Hybrid. Activity is Manufacturing, Services, or Both. It is not a manufacturing-versus-export flag. Export is a separate field.

Ancillaries are the MSME ring around the anchor: the pack assembler, the mould shop, the converter, the authorised recycler, the installer. The centre serves that ring. It does not serve the PLI plant, the fab, the OEM, the DPSU, the hospital chain or the data-centre operator as the cohort.

1.2 How the numbers were built

- TradeStat and DGCIS publish export values. They do not publish a count of exporters. Where an exporter headcount is not in a primary release, the cell says n.p.
- Size bands follow Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025. Micro is at or below ₹10 crore. Small is ₹10–100 crore. Medium is split into ₹100–200 crore and ₹200–500 crore. Large is above ₹500 crore and sits outside MSME. Investment ceilings are ₹2.5 crore, ₹25 crore and ₹125 crore.
- The old single ₹50–200 crore slice is remapped. ₹50–100 sits inside Small. ₹100–200 sits inside Medium.
- Udyam turnover excludes exports under S.O. 2119(E) as amended. A heavy exporter can therefore sit in a lower Udyam class than the gross band used here. The bands in this paper are gross-turnover shapes.

- Export-ready counts are attempted only for Large, Medium ₹200–500 and Medium ₹100–200. Where the count is not published, the cell is n.p. or n.a. Small and Micro do not carry an export-ready column.
- Unit share is not turnover share. A bar that is 70 percent Micro can still be a small share of sales.
- Services have no HSN. Their exports sit in the services account (USD 383.51 billion in FY2024–25), not in a TradeStat goods line.
- Each row carries four finance lines: MFI on the Micro band, specific lending programmes, specific insurance, and venture capital or private equity. CGTMSE is a guarantee. It is not insurance. Business EMI protection is a need to explore. It is not a product.
- Vintage is the date of the new wave (the scheme, the rule, the gate), not the age of the oldest firm. Capacity and capital expenditure are not sales. The semiconductor ₹1.6 lakh crore is committed capex and is labelled that way.
- Band counts are reconstructed and say so in the band method. They are not a GSTN extract and not an MCA census. Official published figures stay in the participant, turnover, export and employee fields.

1.3 Snapshot

Item	Figure
Industry types	31
New candidates	19
New candidates with cluster-shape fit 4 or 5	9
Named Phase II	8
Demonstration	4
Activity	Manufacturing 19; Services 8; Both 4
Merchandise exports, FY2024–25	USD 437.42 billion (PIB / DGCIS)
Services exports, FY2024–25	USD 383.51 billion (PIB)
Electronics goods exports, FY2024–25	USD 38.58 billion
Medical device exports, FY2024–25	USD 4.02 billion (EPCMD / DGCIS)
PLI approvals	806 across 14 sectors

The medtech export and the electronics export are official goods values. They are not a count of firms, and they are not added to each other. Healthtech services are a different row and do not reuse the USD 4.02 billion.

1.4 Cluster-shape rule

Fit, scored 1 to 5 on Canvas A, asks whether a Capability Centre has a cohort to stand in. A type clears the shape test when three things are true together: a thick Micro and Small tail, a visible offtake (a buyer who pays an invoice), and a geography tight enough to staff. A single plant, a fab, a melt shop or a hydrogen facility is an anchor. It can pull a map. It is not itself the cluster. A digital type (IT, AVGC, geospatial, cybersecurity, edtech, fintech, healthtech) is a Chapter 18 member or delivery partner, not a park.

Fit does not enter the charter formula. A fit of 5 can still be a reserve or an attachment. A fit of 3 can still score High on tools and still be the wrong year-1 centre. Section 3 uses both numbers and does not average them.

1.5 Priority new candidates (fit 4 or 5)

9 new candidates clear fit 4 or 5. Demonstration and Phase II rows are left out of these four tables even when their fit is high. Charter rank is section 2. These tables answer only the cluster-shape question.

Identity, export and scale

Type	Fit	HS-4	FY25 export	Participants	Gross turnover	Employees	Vintage
ACC batteries & pack assembly	5	Do not use 8507 as this cohort's export. 8507 is mostly lead-acid. ACC cells and packs are an 8-digit	n.p. for ACC packs. Do not substitute the 8507 line.	A handful of PLI-ACC plants (public awards are on the order of four principal beneficiaries). Pack and BMS MSMEs are not in that list	n.p. PLI-ACC committed investment is capex of the plants, not pack-MSME sales.	n.p. for the pack ring. Do not quote motor-vehicle ASI employment (14.80 lakh) as this cohort.	2021 (PLI-ACC awards). Pack shops are older; the new offtake is the cell plant.

Type	Fit	HS-4	FY25 export	Participants	Gross turnover	Employees	Vintage
		distinction this desk did not pull.		and are not counted here as plants.			
E-waste & circular electronics	5	No clean FY25 export line. Scrap and recovered metal cross several headings and are not this cohort's sales.	n.p. Offtake is domestic EPR and brand buy-back.	CPCB lists authorised recyclers and producers under EPR. The count of authorised recyclers is a regulatory list. Informal units in Seelampur and Moradabad are a much larger, unregistered population and are not added to the authorised list.	n.p.	n.p. Informal employment is large and uncounted in ASI.	2022 (E-Waste Management Rules). The lanes are older.
Footwear (non-leather + sports)	5	6402, 6403, 6404, 6405. CLE's published export is leather plus footwear plus goods, wider than non-leather footwear.	CLE/IBEF: leather, footwear and leather goods exports ₹48,667 crore in FY2024–25. That basket is wider than this cohort.	About 15,000 footwear units (CLE/IBEF). CLE membership is 2,868 and is a different population. Do not add them.	CLE/IBEF sector turnover about ₹1.62 lakh crore, leather plus footwear plus goods. Not a non-leather-only census.	CLE/IBEF: about 42 lakh people in the leather and footwear sector. Not a footwear-only headcount.	2020–21, when BIS footwear quality orders and the non-leather/sports push tightened the file a small unit must hold.
Medical devices	5	9018, 9019, 9021, 9022. IVD reagents often sit in 3822 or 3002. EPCMD's $4.02 bn is its medtech basket, not a proved sum of these headings.	USD 4.02 billion, FY2024–25, EPCMD / DGCIS medtech basket (PIB segment total USD 4,014 million is the same release rounded).	About 700 manufacturers (CII/IBEF). Separately, about 4,000 CDSCO licensed manufacturing sites. These units are not added together.	Market about ₹1.02 lakh crore in FY2023–24 (CII/IBEF). CDSCO does not keep a central production census. FY2024–25 gross turnover is n.p.	n.p. A 1.5 million job figure in secondary commentary is a projection, not a headcount.	2017 (AMTZ as the first park-scale gate); licensing wave 2020; PLI approvals from 2021.
Toys (modern + GI/artisan)	5	9503. Chapter 95 is wider (games and sports requisites) and must not be quoted as toy exports.	HS 9503 USD 169.46 million, FY2024–25, DGCIS. Chapter 95 was USD 570.95 million in the same year and is a different basket.	DPIIT deck: 21,000+ Udyam MSMEs, and 1,800+ BIS licences including foreign licences. June 2025 reporting of BIS: 1,640 licences (1,165 non-electronic, 475 electric). Licences and Udyam registrations are not added.	n.p. No official gross-turnover census for the toy cohort in the series used.	n.p.	2020 duty change; licensing wave from 1 January 2021.
EV charging infrastructure	4	8504 and 8537 cover parts of EVSE. There is no clean FY25 export line for Indian chargers in the series used.	n.p. Treat deployment as domestic.	Charge-point operators and a long tail of electricians and small assemblers. No official enterprise census. FAME-II disclosed sanctioned charger counts by category, which are assets, not firms.	n.p. Subsidy outlays are not installer turnover.	n.p.	2019 FAME-II charging sanctions; the sharper installer wave is PM E-DRIVE from October 2024.
Nutraceuticals & AYUSH manufacturing	4	2106, 3003, 1302 and parts of 3004. Do not use HS 3004 pharmaceutical exports (inside the USD 30.47 billion drugs line) as this cohort.	Pharmexcil, 14 June 2025: AYUSH and herbals USD 688.89 million. That is the herbal and AYUSH line, not all nutraceuticals.	Licensed AYUSH and nutraceutical manufacturers. A single official count combining both regimes was not found, so none is stated as a census. Pharmexcil members are a third, export-oriented list.	n.p. as a combined gross turnover. Do not reuse the medical-device market or the pharma export total.	n.p. ASI FY2024–25 pharma-factory employment is 10.92 lakh and is the parent drug industry, not this cohort.	2021, when FSSAI's health-supplement enforcement and the PLI millet and health-food window overlapped.
Space components & small-sat	4	Do not use 8802. That is aircraft. Small-sat and components are not a single FY25 heading in the series used.	n.p. for this cohort.	IN-SPACe authorisations and a short list of private launch and satellite firms. Component MSMEs are n.p. Do not add authorisations to firms.	n.p.	n.p.	2020 (IN-SPACe and the private-participation reform).
Technical textiles & MMF	4	5603, 5903, 5911, selected 5407 and 5512. The Ministry's technical-textile total is its own definition, not one heading.	₹24,732.68 crore in FY2024–25, Ministry of Textiles technical-textile series, up from ₹21,407.36 crore in FY2023–24. Not the same as RMG (USD 15.99 billion) or the USD 6 billion man-made-fibre textile line.	24 GREAT startups and 30 PLI textile companies that had commenced production are scheme lists. They are not the mill and converter population, and they are not added to each other.	n.p. for technical textiles as a product class. ASI FY2024–25 textile-factory employment is 17.57 lakh persons and is all textiles.	n.p. for the subset. ASI FY2024–25: 17.57 lakh persons in textile factories, which is the parent industry, not this cohort. NTTM training of more than 1,000 persons is not employment.	2020 (NTTM). PLI performance years start after a two-year gestation.

Activity, turnover split, Micro and MFI

Type	Activity	Domestic vs export	Micro ≤ ₹10 cr	MFI on Micro
ACC batteries & pack assembly	Manufacturing	Treat as domestic. Offtake is the OEM goods-receipt, not a merchandise export line.	489	Thin. MUDRA or CGTMSE may touch a micro pack shop. There is no sector MFI. The working-capital need is a bank line against OEM receipts.
E-waste & circular electronics	Manufacturing	Treat as domestic. The buyer is the brand's EPR obligation and the local scrap trade.	7003	Active on the informal micro tail in Seelampur and Moradabad: local micro-lenders and some NBFC-MFI household loans. That credit is not a recycler term loan and does not survive an authorisation process by itself.
Footwear (non-leather + sports)	Manufacturing	Export ₹48,667 crore against sector turnover about ₹1.62 lakh crore is about 30% export and 70% domestic, on the CLE basket. The non-leather cohort is not split out.	10500	Active in the Agra and Ambur micro and job-work tail: MUDRA, NBFC micro loans and local chit or cooperative channels are in daily use. They do not cover a brand receivable.
Medical devices	Manufacturing	Export USD 4.02 billion in FY2024–25 against an FY2024 market of ₹1.02 lakh crore. Treat export as about one-third of that earlier market, not as a reconciled FY2024–25 turnover split. Domestic residual is reconstructed.	252	Thin. MUDRA and CGTMSE exist. There is no sector NBFC-MFI book for a licensed device site. SHG and NABARD are not the operating channel.
Toys (modern + GI/ artisan)	Manufacturing	Export of HS 9503 is known. Domestic turnover is n.p., so no percentage split is stated. Most units sell domestically.	18025	Active on the artisan and SFURTI spokes: MUDRA, PMEGP, state cooperative and PM Vishwakarma-type artisan channels, and some SHG craft finance. Not an NBFC-MFI book for an electric-toy factory.
EV charging infrastructure	Both	Treat as domestic. The payer is the CPO, the fleet, or the DISCOM programme.	1700	Thin. A micro electrician may use MUDRA. The CPO's project finance is not an MFI product.
Nutraceuticals & AYUSH manufacturing	Manufacturing	The AYUSH and herbals export is known. Domestic turnover is n.p., so no percentage is stated. Brand sales are mostly domestic.	1300	Thin. A micro herbal unit may use MUDRA. The licensed factory is a bank file. No sector MFI.
Space components & small-sat	Both	Treat as domestic. The buyer is ISRO or a private prime.	130	None typical. Banks, grants and venture only.
Technical textiles & MMF	Manufacturing	Exports are known. Domestic turnover of the technical subset is n.p., so no share is stated.	1850	Thin for a converter. A micro weaver in the same town may use MUDRA. NABARD is relevant only for a rural producer, not for a specified-fabric supplier.

Upper bands and export-ready counts

Type	Large > ₹500	Medium ₹200–500	Medium ₹100–200	Small ₹10–100
ACC batteries & pack assembly	6 · export-ready 4 reconstructed — the awarded plants, domestic offtake, not exporters	15 · export-ready 5 reconstructed domestic OEM suppliers	40 · export-ready 8 reconstructed domestic OEM suppliers	250
E-waste & circular electronics	12 · export-ready n.a. as exporters — domestic EPR offtake	25 · export-ready n.a. as exporters	60 · export-ready n.a. as exporters	900
Footwear (non-leather + sports)	40 · export-ready 25 reconstructed from CLE's exporting members — membership is not this count	80 · export-ready 30 reconstructed	180 · export-ready 50 reconstructed	4200
Medical devices	70 · export-ready 40 reconstructed among the ~70 non-MSME names — not a TradeStat census	35 · export-ready 12 reconstructed	63 · export-ready 18 reconstructed	280
Toys (modern + GI/artisan)	15 · export-ready 8 reconstructed named exporters	40 · export-ready 10 reconstructed	120 · export-ready 25 reconstructed	2800
EV charging infrastructure	15 · export-ready n.a. as exporters — domestic CPO offtake	25 · export-ready n.a. as exporters	60 · export-ready n.a. as exporters	700
Nutraceuticals & AYUSH manufacturing	30 · export-ready 15 reconstructed from the exporting Pharmexcil-visible set	50 · export-ready 12 reconstructed	120 · export-ready 20 reconstructed	700
Space components & small-sat	8 · export-ready n.a. as exporters — domestic ISRO and prime offtake	12 · export-ready n.a. as exporters	20 · export-ready n.a. as exporters	80
Technical textiles & MMF	40 · export-ready 20 reconstructed — PLI and larger exporters, not a census	60 · export-ready 15 reconstructed	150 · export-ready 25 reconstructed	900

Export-ready cells are n.p. where no primary count was found. They are not inferred from the export value.

Lending, insurance and venture capital

Type	Lending programmes	Insurance cover	VC / PE
ACC batteries & pack assembly	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: PLI-ACC is not a lending programme for the pack MSME. Vehicle NBFCs finance the vehicle, not the pack shop. No dedicated pack-MSME line was verified.	Product liability and transit for lithium packs are commercial and often missing at MSME scale. OEM receivables are uninsured. Fire is material because of the chemistry. ECGC is largely n.a. while offtake is domestic.	Deep on the cell and OEM climate investors. Thin to none on the pack and BMS MSME.

Type	Lending programmes	Insurance cover	VC / PE
E-waste & circular electronics	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: no MSME e-waste term-loan product verified. EPR credit is the brand's compliance cost, not a loan to the dismantler. SIDBI green lines, where offered, sit above this tail.	Pollution liability and workmen cover are the gap. Fire is commercial. There is no receivable to insure until an invoice exists. CGTMSE is not a cover.	Moderate on a few organised recyclers. None on the informal lane.
Footwear (non-leather + sports)	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: Footwear-specific credit-linked files (FPS-type bank sanction) stall after eligibility. IFLADP is a development programme, not a substitute for the sanction file. No evidence the brand pays on TReDS at the job-work tier.	ECGC for exporters. Fire and marine commercial. Brand goods-receipt receivables are uninsured. Product liability for sports footwear is commercial and patchy. CGTMSE is not a cover.	Thin on the job-work and sole unit. Moderate only where a brand has raised growth capital. That capital does not reach the belt.
Medical devices	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: PLI MedTech is an incentive on eligible sales for 28 approved applicants, not a loan to the MSME ring. Park allotment and state medical-device schemes are the usable files. No dedicated MSME device term-loan product was verified.	ECGC for the exporter. Product liability and recall are the covers buyers expect; penetration is n.p. Fire and marine are commercial. Hospital and PSU receivables are uninsured. CGTMSE is not a cover.	Moderate on scaled device and diagnostics companies. Thin to none on the mould, pack and disposable MSME ring. Digital-health venture funds are a different industry.
Toys (modern + GI/artisan)	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: SFURTI is grant infrastructure in 19 clusters, not a revolving loan. No toy-specific NBFC scheme was verified. PM Vishwakarma where the unit is an artisan.	Product liability matters because the user is a child; penetration n.p. Fire and stock are commercial. ECGC only for the small exporting set. Marketplace receivables are largely uninsured.	Thin. DPIIT startup recognition is a certificate, not capital. No visible PE book on the artisan or small-factory ring.
EV charging infrastructure	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: PM E-DRIVE and FAME-II are subsidies on charging assets, paid through programme agencies, not a loan to the electrician. No MSME EVSE line verified.	Public liability at the charger and workmen cover for installers are the gap. CPO receivables to a small assembler are uninsured. ECGC is n.a. for domestic installs.	Moderate on charge-point operators. None on the electrician.
Nutraceuticals & AYUSH manufacturing	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: AYUSH and FSSAI schemes and the PLI food health window for firms that qualify. PLI is not the micro formulator's loan. No dedicated nutraceutical MSME line verified.	Product liability and recall are the gap. ECGC for the AYUSH exporter. Brand and modern-trade receivables are uninsured. Clinical-trial cover is n.a. for a supplement unit.	Moderate on branded AYUSH and consumer-health companies. Thin on the contract packer.
Space components & small-sat	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: IN-SPACe authorisation is a gate, not a loan. No MSME space-component line verified.	Launch and in-orbit covers sit with the prime. The machine shop's fire and workmen covers are ordinary. Milestone receivables from ISRO are uninsured.	Moderate on a few private space firms. None on the machine shop.
Technical textiles & MMF	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: NTTM and GREAT are grants. PLI Textiles is an incentive for companies that clear an investment threshold. TUFS-successor status for new cases was not confirmed, so it is not listed as open. No micro-converter loan product.	ECGC for exporters. Fire and machinery for mills. Product liability where the cloth is protective or medical. Receivables from an auto or defence buyer are uninsured.	The 24 GREAT startups are grant-funded (approved cost ₹12.16 crore, of which the Government of India share was ₹10.79 crore), which is not venture capital. PE that exists sits with larger MMF players, not the converter.

1.6 Full register — all 31 types

Sorted as new candidates, then named Phase II, then demonstration, and within each group by cluster-shape fit and then by name. Every Canvas A field is in the table. Fit in this section is the cluster-shape score. It is not the charter score in section 2.

ACC batteries & pack assembly · New candidate · fit 5

Field	Value
Id	battery
Industry	ACC batteries & pack assembly
Funded or newly gated wave	PLI Advanced Chemistry Cell, 2021, awarded to a handful of gigafactory applicants. Pack, BMS and recycling sit outside that award.
Participants	A handful of PLI-ACC plants (public awards are on the order of four principal beneficiaries). Pack and BMS MSMEs are not in that list and are not counted here as plants.
What was counted	PLI-ACC beneficiary plants. The MSME ring is a separate, uncounted population.
Ancillaries (the MSME ring)	Pack assembly, battery-management electronics, casings, testing, collection and authorised recycling MSMEs — not the four cell plants
Activity (manufacturing vs services)	Manufacturing
Geography	Wherever the awarded cell plants sit, plus existing pack shops in the Pune, NCR and southern auto-electronics belts. The ring is not the plant campus.
Mode	Hybrid
ICAM status	New candidate
Cluster-shape fit (1–5)	5
Why this fit	The cell plant is an anchor. Pack, BMS and recycling MSMEs are a thick enough ring, with OEM goods-receipt offtake, to form a centre.
HS-4 / services note	Do not use 8507 as this cohort's export. 8507 is mostly lead-acid. ACC cells and packs are an 8-digit distinction this desk did not pull.
FY2024–25 export	n.p. for ACC packs. Do not substitute the 8507 line.
Exporting units	n.a. as a TradeStat count. Domestic OEM offtake is the buyer.
Gross turnover	n.p. PLI-ACC committed investment is capex of the plants, not pack-MSME sales.
Domestic vs export turnover	Treat as domestic. Offtake is the OEM goods-receipt, not a merchandise export line.
Employees	n.p. for the pack ring. Do not quote motor-vehicle ASI employment (14.80 lakh) as this cohort.
Vintage of the wave	2021 (PLI-ACC awards). Pack shops are older; the new offtake is the cell plant.
Large, above ₹500 crore (count)	6
Export-ready, Large	4 reconstructed — the awarded plants, domestic offtake, not exporters
Medium, ₹200–500 crore (count)	15
Export-ready, Medium ₹200–500	5 reconstructed domestic OEM suppliers
Medium, ₹100–200 crore (count)	40
Export-ready, Medium ₹100–200	8 reconstructed domestic OEM suppliers
Small, ₹10–100 crore (count)	250
Micro, at or below ₹10 crore (count)	489
MFI on Micro	Thin. MUDRA or CGTMSE may touch a micro pack shop. There is no sector MFI. The working-capital need is a bank line against OEM receipts.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: PLI-ACC is not a lending programme for the pack MSME. Vehicle NBFCs finance the vehicle, not the pack shop. No dedicated pack-MSME line was verified.
Specific insurance coverage	Product liability and transit for lithium packs are commercial and often missing at MSME scale. OEM receivables are uninsured. Fire is material because of the chemistry. ECGC is largely n.a. while offtake is domestic.

Field	Value
Venture capital and private equity	Deep on the cell and OEM climate investors. Thin to none on the pack and BMS MSME.
Band method	Universe: a reconstructed pack, BMS and recycling ring of about 800 units. The awarded plants sit in Large and are not the cohort. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 1%; Medium ₹200–500 2%; Medium ₹100–200 5%; Small 31%; Micro 61%. Share of units, not share of turnover.

E-waste & circular electronics · New candidate · fit 5

Field	Value
Id	ewaste
Industry	E-waste & circular electronics
Funded or newly gated wave	E-Waste (Management) Rules, 2022, with EPR and CPCB authorisation. Informal belts pre-date the rules; the gate is the authorisation.
Participants	CPCB lists authorised recyclers and producers under EPR. The count of authorised recyclers is a regulatory list. Informal units in Seelampur and Moradabad are a much larger, unregistered population and are not added to the authorised list.
What was counted	CPCB authorisations, with informal units named as a separate population
Ancillaries (the MSME ring)	Collection, dismantling, sorting and repair shops in the informal belt that could be brought to an authorisation — not the brand that files the EPR return
Activity (manufacturing vs services)	Manufacturing
Geography	Seelampur (Delhi) and Moradabad, with smaller belts in other cities. Tight enough for a hub-and-spoke once units are formal.
Mode	Traditional
ICAM status	New candidate
Cluster-shape fit (1–5)	5
Why this fit	A thick informal micro tail in named lanes, with brand EPR as the offtake, if the centre first gets units authorised.
HS-4 / services note	No clean FY25 export line. Scrap and recovered metal cross several headings and are not this cohort's sales.
FY2024–25 export	n.p. Offtake is domestic EPR and brand buy-back.
Exporting units	n.a. as exporters. Authorised recyclers are a domestic regulatory list.
Gross turnover	n.p.
Domestic vs export turnover	Treat as domestic. The buyer is the brand's EPR obligation and the local scrap trade.
Employees	n.p. Informal employment is large and uncounted in ASI.
Vintage of the wave	2022 (E-Waste Management Rules). The lanes are older.
Large, above ₹500 crore (count)	12
Export-ready, Large	n.a. as exporters — domestic EPR offtake
Medium, ₹200–500 crore (count)	25
Export-ready, Medium ₹200–500	n.a. as exporters
Medium, ₹100–200 crore (count)	60
Export-ready, Medium ₹100–200	n.a. as exporters
Small, ₹10–100 crore (count)	900
Micro, at or below ₹10 crore (count)	7003
MFI on Micro	Active on the informal micro tail in Seelampur and Moradabad: local micro-lenders and some NBFC-MFI household loans. That credit is not a recycler term loan and does not survive an authorisation process by itself.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: no MSME e-waste term-loan product verified. EPR credit is the brand's compliance cost, not a loan to the dismantler. SIDBI green lines, where offered, sit above this tail.
Specific insurance coverage	Pollution liability and workmen cover are the gap. Fire is commercial. There is no receivable to insure until an invoice exists. CGTMSE is not a cover.
	Moderate on a few organised recyclers. None on the informal lane.

Field	Value
Venture capital and private equity	
Band method	Universe: a reconstructed ~8,000 units in the known informal belts plus authorised recyclers in the upper bands. Not a CPCB extract. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 0%; Medium ₹200–500 0%; Medium ₹100–200 1%; Small 11%; Micro 88%. Share of units, not share of turnover.

Footwear (non-leather + sports) · New candidate · fit 5

Field	Value
Id	footwear
Industry	Footwear (non-leather + sports)
Funded or newly gated wave	Indian Footwear and Leather Development Programme · BIS quality orders on footwear from 2020–21 · CLE cluster work in the established belts. The new gate is non-leather and sports footwear plus the BIS file, not the age of the tannery.
Participants	About 15,000 footwear units (CLE/IBEF). CLE membership is 2,868 and is a different population. Do not add them.
What was counted	Footwear manufacturing units
Ancillaries (the MSME ring)	Soles, lasts, uppers, synthetic components, packaging and job-work units in the belt — not the brand and not the tannery if it is outside the non-leather cohort
Activity (manufacturing vs services)	Manufacturing
Geography	Ambur–Ranipet in Tamil Nadu, and Agra. Other CLE belts exist; year-1 is one of these two.
Mode	Traditional
ICAM status	New candidate
Cluster-shape fit (1–5)	5
Why this fit	A thick small-factory tail in two tight belts, with brand and export-house offtake.
HS-4 / services note	6402, 6403, 6404, 6405. CLE's published export is leather plus footwear plus goods, wider than non-leather footwear.
FY2024–25 export	CLE/IBEF: leather, footwear and leather goods exports ₹48,667 crore in FY2024–25. That basket is wider than this cohort.
Exporting units	Not a TradeStat count. CLE's 2,868 members are a membership proxy, not exporters and not the 15,000 units.
Gross turnover	CLE/IBEF sector turnover about ₹1.62 lakh crore, leather plus footwear plus goods. Not a non-leather-only census.
Domestic vs export turnover	Export ₹48,667 crore against sector turnover about ₹1.62 lakh crore is about 30% export and 70% domestic, on the CLE basket. The non-leather cohort is not split out.
Employees	CLE/IBEF: about 42 lakh people in the leather and footwear sector. Not a footwear-only headcount.
Vintage of the wave	2020–21, when BIS footwear quality orders and the non-leather/sports push tightened the file a small unit must hold.
Large, above ₹500 crore (count)	40
Export-ready, Large	25 reconstructed from CLE's exporting members — membership is not this count
Medium, ₹200–500 crore (count)	80
Export-ready, Medium ₹200–500	30 reconstructed
Medium, ₹100–200 crore (count)	180
Export-ready, Medium ₹100–200	50 reconstructed
Small, ₹10–100 crore (count)	4200
Micro, at or below ₹10 crore (count)	10500
MFI on Micro	Active in the Agra and Ambur micro and job-work tail: MUDRA, NBFC micro loans and local chit or cooperative channels are in daily use. They do not cover a brand receivable.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: Footwear-specific credit-linked files (FPS-type bank sanction) stall after eligibility. IFLADP is a development programme, not a substitute for the sanction file. No evidence the brand pays on TReDS at the job-work tier.
Specific insurance coverage	ECGC for exporters. Fire and marine commercial. Brand goods-receipt receivables are uninsured. Product liability for sports footwear is commercial and patchy. CGTMSE is not a cover.
Venture capital and private equity	Thin on the job-work and sole unit. Moderate only where a brand has raised growth capital. That capital does not reach the belt.

Field	Value
Band method	Universe: about 15,000 footwear units (CLE/IBEF). Shares are a reconstructed shape of that count. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 0%; Medium ₹200–500 1%; Medium ₹100–200 1%; Small 28%; Micro 70%. Share of units, not share of turnover.

Medical devices · New candidate · fit 5

Field	Value
Id	medtech
Industry	Medical devices
Funded or newly gated wave	Medical Devices Rules phased by risk class through 2020–23 · PLI MedTech 2020 (outlay ₹3,420 crore) · medical device parks · AMTZ Vizag 2017 · National Medical Devices Policy 2023
Participants	About 700 manufacturers (CII/IBEF). Separately, about 4,000 CDSCO licensed manufacturing sites. These units are not added together.
What was counted	Manufacturers, with licensed sites stated as a second population
Ancillaries (the MSME ring)	Moulds, sterile pack, instruments, disposables, sub-assemblies and test labs around licensed MSME sites — not the hospital chain and not the 28 PLI principals
Activity (manufacturing vs services)	Manufacturing
Geography	AMTZ Visakhapatnam spoke; Greater Noida and the Kanchipuram licensed-site belt; other parks in Madhya Pradesh and Tamil Nadu. State split of the 4,000 sites is not published.
Mode	Hybrid
ICAM status	New candidate
Cluster-shape fit (1–5)	5
Why this fit	Thick MSME manufacturer tail, park belts, and hospital or PSU offtake a centre can sit beside without becoming the park.
HS-4 / services note	9018, 9019, 9021, 9022. IVD reagents often sit in 3822 or 3002. EPCMD's $4.02 bn is its medtech basket, not a proved sum of these headings.
FY2024–25 export	USD 4.02 billion, FY2024–25, EPCMD / DGCIS medtech basket (PIB segment total USD 4,014 million is the same release rounded).
Exporting units	Not a TradeStat count. Proxy: licensed manufacturers who hold an IEC, uncounted. Do not treat 700 or 4,000 as exporters.
Gross turnover	Market about ₹1.02 lakh crore in FY2023–24 (CII/IBEF). CDSCO does not keep a central production census. FY2024–25 gross turnover is n.p.
Domestic vs export turnover	Export USD 4.02 billion in FY2024–25 against an FY2024 market of ₹1.02 lakh crore. Treat export as about one-third of that earlier market, not as a reconciled FY2024–25 turnover split. Domestic residual is reconstructed.
Employees	n.p. A 1.5 million job figure in secondary commentary is a projection, not a headcount.
Vintage of the wave	2017 (AMTZ as the first park-scale gate); licensing wave 2020; PLI approvals from 2021.
Large, above ₹500 crore (count)	70
Export-ready, Large	40 reconstructed among the ~70 non-MSME names — not a TradeStat census
Medium, ₹200–500 crore (count)	35
Export-ready, Medium ₹200–500	12 reconstructed
Medium, ₹100–200 crore (count)	63
Export-ready, Medium ₹100–200	18 reconstructed
Small, ₹10–100 crore (count)	280
Micro, at or below ₹10 crore (count)	252
MFI on Micro	Thin. MUDRA and CGTMSE exist. There is no sector NBFC-MFI book for a licensed device site. SHG and NABARD are not the operating channel.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: PLI MedTech is an incentive on eligible sales for 28 approved applicants, not a loan to the MSME ring. Park allotment and state medical-device schemes are the usable files. No dedicated MSME device term-loan product was verified.
Specific insurance coverage	ECGC for the exporter. Product liability and recall are the covers buyers expect; penetration is n.p. Fire and marine are commercial. Hospital and PSU receivables are uninsured. CGTMSE is not a cover.

Field	Value
Venture capital and private equity	Moderate on scaled device and diagnostics companies. Thin to none on the mould, pack and disposable MSME ring. Digital-health venture funds are a different industry.
Band method	Universe: the CII/IBEF ~700 manufacturers, of which about 90% are described as MSME. The ~4,000 licensed sites are not this pyramid. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 10%; Medium ₹200–500 5%; Medium ₹100–200 9%; Small 40%; Micro 36%. Share of units, not share of turnover.

Toys (modern + GI/artisan) · New candidate · fit 5

Field	Value
Id	toys
Industry	Toys (modern + GI/artisan)
Funded or newly gated wave	Toys (Quality Control) Order, 2020, effective 1 January 2021 · basic customs duty on 9503 raised to 60% in February 2020 and 70% in March 2023 · 19 SFURTI toy clusters · design support to 26 clusters · DPIIT toy-startup recognition
Participants	DPIIT deck: 21,000+ Udyam MSMEs, and 1,800+ BIS licences including foreign licences. June 2025 reporting of BIS: 1,640 licences (1,165 non-electronic, 475 electric). Licences and Udyam registrations are not added.
What was counted	Udyam registrations, with BIS licences as a separate unit
Ancillaries (the MSME ring)	Moulds, paint, packaging, wood and GI artisan spokes (Channapatna and others) plus small electric-toy units that still lack a BIS file
Activity (manufacturing vs services)	Manufacturing
Geography	About 50 clusters cited by DPIIT. Koppal hub; NCR and Greater Noida toy park; Channapatna; Maharashtra units. A centre is a hub plus spokes, not one park.
Mode	Traditional
ICAM status	New candidate
Cluster-shape fit (1–5)	5
Why this fit	A thick micro tail, named belts, and a QCO that already knocked small units out of the market.
HS-4 / services note	9503. Chapter 95 is wider (games and sports requisites) and must not be quoted as toy exports.
FY2024–25 export	HS 9503 USD 169.46 million, FY2024–25, DGCIS. Chapter 95 was USD 570.95 million in the same year and is a different basket.
Exporting units	n.p. TradeStat has no exporter count. BIS licensees are not exporters. Goods made only for export sit outside the QCO.
Gross turnover	n.p. No official gross-turnover census for the toy cohort in the series used.
Domestic vs export turnover	Export of HS 9503 is known. Domestic turnover is n.p., so no percentage split is stated. Most units sell domestically.
Employees	n.p.
Vintage of the wave	2020 duty change; licensing wave from 1 January 2021.
Large, above ₹500 crore (count)	15
Export-ready, Large	8 reconstructed named exporters
Medium, ₹200–500 crore (count)	40
Export-ready, Medium ₹200–500	10 reconstructed
Medium, ₹100–200 crore (count)	120
Export-ready, Medium ₹100–200	25 reconstructed
Small, ₹10–100 crore (count)	2800
Micro, at or below ₹10 crore (count)	18025
MFI on Micro	Active on the artisan and SFURTI spokes: MUDRA, PMEGP, state cooperative and PM Vishwakarma-type artisan channels, and some SHG craft finance. Not an NBFC-MFI book for an electric-toy factory.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: SFURTI is grant infrastructure in 19 clusters, not a revolving loan. No toy-specific NBFC scheme was verified. PM Vishwakarma where the unit is an artisan.
Specific insurance coverage	Product liability matters because the user is a child; penetration n.p. Fire and stock are commercial. ECGC only for the small exporting set. Marketplace receivables are largely uninsured.

Field	Value
Venture capital and private equity	Thin. DPIIT startup recognition is a certificate, not capital. No visible PE book on the artisan or small-factory ring.
Band method	Universe: the 21,000+ Udyam registrations, not the 1,640 BIS licences. Most of this pyramid is Micro. QCO drop-outs may already have left Udyam. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 0%; Medium ₹200–500 0%; Medium ₹100–200 1%; Small 13%; Micro 86%. Share of units, not share of turnover.

EV charging infrastructure · New candidate · fit 4

Field	Value
Id	charging
Industry	EV charging infrastructure
Funded or newly gated wave	FAME-II charging outlay (₹912.50 crore sanctioned for charging under that scheme) · PM E-DRIVE from 1 October 2024, ₹10,900 crore, with a charging-infrastructure component · public guidelines treat charging as an unlicensed activity.
Participants	Charge-point operators and a long tail of electricians and small assemblers. No official enterprise census. FAME-II disclosed sanctioned charger counts by category, which are assets, not firms.
What was counted	No enterprise census. Charger counts are assets and are not used as the firm count.
Ancillaries (the MSME ring)	Local electricians, panel builders, small EVSE assemblers and maintenance MSEs — not the charge-point operator and not the DISCOM
Activity (manufacturing vs services)	Both
Geography	Installation is pan-India along highways and cities. Assembly and panel work concentrates in the NCR, Pune and Gujarat electrical belts.
Mode	Hybrid
ICAM status	New candidate
Cluster-shape fit (1–5)	4
Why this fit	Visible DISCOM and fleet offtake, and a real installer tail, but the tail is spread along roads rather than one lane.
HS-4 / services note	8504 and 8537 cover parts of EVSE. There is no clean FY25 export line for Indian chargers in the series used.
FY2024–25 export	n.p. Treat deployment as domestic.
Exporting units	n.a. as exporters.
Gross turnover	n.p. Subsidy outlays are not installer turnover.
Domestic vs export turnover	Treat as domestic. The payer is the CPO, the fleet, or the DISCOM programme.
Employees	n.p.
Vintage of the wave	2019 FAME-II charging sanctions; the sharper installer wave is PM E-DRIVE from October 2024.
Large, above ₹500 crore (count)	15
Export-ready, Large	n.a. as exporters — domestic CPO offtake
Medium, ₹200–500 crore (count)	25
Export-ready, Medium ₹200–500	n.a. as exporters
Medium, ₹100–200 crore (count)	60
Export-ready, Medium ₹100–200	n.a. as exporters
Small, ₹10–100 crore (count)	700
Micro, at or below ₹10 crore (count)	1700
MFI on Micro	Thin. A micro electrician may use MUDRA. The CPO's project finance is not an MFI product.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: PM E-DRIVE and FAME-II are subsidies on charging assets, paid through programme agencies, not a loan to the electrician. No MSME EVSE line verified.
Specific insurance coverage	Public liability at the charger and workmen cover for installers are the gap. CPO receivables to a small assembler are uninsured. ECGC is n.a. for domestic installs.
Venture capital and private equity	Moderate on charge-point operators. None on the electrician.

Field	Value
Band method	Universe: a reconstructed ~2,500 assemblers, panel shops and installer firms. Charger asset counts are not this pyramid. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 1%; Medium ₹200–500 1%; Medium ₹100–200 2%; Small 28%; Micro 68%. Share of units, not share of turnover.

Nutraceuticals & AYUSH manufacturing · New candidate · fit 4

Field	Value
Id	nutra
Industry	Nutraceuticals & AYUSH manufacturing
Funded or newly gated wave	FSSAI nutraceutical and health-supplement rules · AYUSH manufacturing licensing · PLI food's millet and health-food window from 2021 · Pharmexcil's AYUSH and herbals export line
Participants	Licensed AYUSH and nutraceutical manufacturers. A single official count combining both regimes was not found, so none is stated as a census. Pharmexcil members are a third, export-oriented list.
What was counted	Licensed manufacturers under FSSAI and AYUSH regimes — counts not merged
Ancillaries (the MSME ring)	Extractors, packers, printers and small formulators — not the hospital and not the pharmacy chain
Activity (manufacturing vs services)	Manufacturing
Geography	Himachal (Baddi and surrounds), Uttarakhand, Gujarat and Maharashtra health-product belts. Not one park.
Mode	Hybrid
ICAM status	New candidate
Cluster-shape fit (1–5)	4
Why this fit	Licensed manufacturers with a domestic brand and export buyer, in known belts, but the two regulators mean the list is split.
HS-4 / services note	2106, 3003, 1302 and parts of 3004. Do not use HS 3004 pharmaceutical exports (inside the USD 30.47 billion drugs line) as this cohort.
FY2024–25 export	Pharmexcil, 14 June 2025: AYUSH and herbals USD 688.89 million. That is the herbal and AYUSH line, not all nutraceuticals.
Exporting units	Pharmexcil membership is a proxy, not a TradeStat exporter count, and it is not all manufacturers.
Gross turnover	n.p. as a combined gross turnover. Do not reuse the medical-device market or the pharma export total.
Domestic vs export turnover	The AYUSH and herbals export is known. Domestic turnover is n.p., so no percentage is stated. Brand sales are mostly domestic.
Employees	n.p. ASI FY2024–25 pharma-factory employment is 10.92 lakh and is the parent drug industry, not this cohort.
Vintage of the wave	2021, when FSSAI's health-supplement enforcement and the PLI millet and health-food window overlapped.
Large, above ₹500 crore (count)	30
Export-ready, Large	15 reconstructed from the exporting Pharmexcil-visible set
Medium, ₹200–500 crore (count)	50
Export-ready, Medium ₹200–500	12 reconstructed
Medium, ₹100–200 crore (count)	120
Export-ready, Medium ₹100–200	20 reconstructed
Small, ₹10–100 crore (count)	700
Micro, at or below ₹10 crore (count)	1300
MFI on Micro	Thin. A micro herbal unit may use MUDRA. The licensed factory is a bank file. No sector MFI.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: AYUSH and FSSAI schemes and the PLI food health window for firms that qualify. PLI is not the micro formulator's loan. No dedicated nutraceutical MSME line verified.
Specific insurance coverage	Product liability and recall are the gap. ECGC for the AYUSH exporter. Brand and modern-trade receivables are uninsured. Clinical-trial cover is n.a. for a supplement unit.
Venture capital and private equity	Moderate on branded AYUSH and consumer-health companies. Thin on the contract packer.

Field	Value
Band method	Universe: a reconstructed ~2,200 licensed manufacturers. Not an FSSAI extract and not added to AYUSH licences. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 1%; Medium ₹200–500 2%; Medium ₹100–200 6%; Small 32%; Micro 59%. Share of units, not share of turnover.

Space components & small-sat · New candidate · fit 4

Field	Value
Id	space
Industry	Space components & small-sat
Funded or newly gated wave	IN-SPACe, 2020 · space-sector reforms opening private participation · production-linked and technology funds are not an MSME scheme. iDEX overlaps defence space and is not this cohort.
Participants	IN-SPACe authorisations and a short list of private launch and satellite firms. Component MSMEs are n.p. Do not add authorisations to firms.
What was counted	Authorisations and known private space firms. Not a component census.
Ancillaries (the MSME ring)	Precision machining, composites, harness and electronics job-shops that could sell to a private satellite firm or to ISRO's vendor list — not ISRO and not the launch company
Activity (manufacturing vs services)	Both
Geography	Bengaluru and Hyderabad, with a thin scatter in Ahmedabad and Thiruvananthapuram. Not a single lane.
Mode	Hybrid
ICAM status	New candidate
Cluster-shape fit (1–5)	4
Why this fit	A real component craft exists in two cities, but offtake is still ISRO and a few private primes, and the MSME list is thin.
HS-4 / services note	Do not use 8802. That is aircraft. Small-sat and components are not a single FY25 heading in the series used.
FY2024–25 export	n.p. for this cohort.
Exporting units	n.a. ISRO and IN-SPACe authorisations are not exporters.
Gross turnover	n.p.
Domestic vs export turnover	Treat as domestic. The buyer is ISRO or a private prime.
Employees	n.p.
Vintage of the wave	2020 (IN-SPACe and the private-participation reform).
Large, above ₹500 crore (count)	8
Export-ready, Large	n.a. as exporters — domestic ISRO and prime offtake
Medium, ₹200–500 crore (count)	12
Export-ready, Medium ₹200–500	n.a. as exporters
Medium, ₹100–200 crore (count)	20
Export-ready, Medium ₹100–200	n.a. as exporters
Small, ₹10–100 crore (count)	80
Micro, at or below ₹10 crore (count)	130
MFI on Micro	None typical. Banks, grants and venture only.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: IN-SPACe authorisation is a gate, not a loan. No MSME space-component line verified.
Specific insurance coverage	Launch and in-orbit covers sit with the prime. The machine shop's fire and workmen covers are ordinary. Milestone receivables from ISRO are uninsured.
Venture capital and private equity	Moderate on a few private space firms. None on the machine shop.

Field	Value
Band method	Universe: a reconstructed ~250 firms including primes in Large. Shape sketch, not an IN-SPACe extract. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 3%; Medium ₹200–500 5%; Medium ₹100–200 8%; Small 32%; Micro 52%. Share of units, not share of turnover.

Technical textiles & MMF · New candidate · fit 4

Field	Value
Id	techtex
Industry	Technical textiles & MMF
Funded or newly gated wave	National Technical Textiles Mission, 2020, outlay ₹1,480 crore, extended to 31 March 2026 · GREAT startup grants (24 startups, up to ₹50 lakh) · PLI Textiles notified 24 September 2021, outlay ₹10,683 crore · 8 QCOs on 68 items
Participants	24 GREAT startups and 30 PLI textile companies that had commenced production are scheme lists. They are not the mill and converter population, and they are not added to each other.
What was counted	Scheme participants (startups and PLI companies), not a mill census
Ancillaries (the MSME ring)	Independent coaters, nonwoven units and converters selling to auto, medical, infrastructure or defence buyers — not the 30 PLI companies and not a commodity powerloom
Activity (manufacturing vs services)	Manufacturing
Geography	Surat, Panipat, Coimbatore and other MMF centres. GREAT startups are scattered, including Bengaluru. No official district census of technical-textile units.
Mode	Traditional
ICAM status	New candidate
Cluster-shape fit (1–5)	4
Why this fit	Real buyer industries and a converter tail inside old textile towns, but the technical-textile firm is not yet separated from the commodity mill.
HS-4 / services note	5603, 5903, 5911, selected 5407 and 5512. The Ministry's technical-textile total is its own definition, not one heading.
FY2024–25 export	₹24,732.68 crore in FY2024–25, Ministry of Textiles technical-textile series, up from ₹21,407.36 crore in FY2023–24. Not the same as RMG (USD 15.99 billion) or the USD 6 billion man-made-fibre textile line.
Exporting units	n.p. The Ministry publishes the value, not an exporter count.
Gross turnover	n.p. for technical textiles as a product class. ASI FY2024–25 textile-factory employment is 17.57 lakh persons and is all textiles.
Domestic vs export turnover	Exports are known. Domestic turnover of the technical subset is n.p., so no share is stated.
Employees	n.p. for the subset. ASI FY2024–25: 17.57 lakh persons in textile factories, which is the parent industry, not this cohort. NTTM training of more than 1,000 persons is not employment.
Vintage of the wave	2020 (NTTM). PLI performance years start after a two-year gestation.
Large, above ₹500 crore (count)	40
Export-ready, Large	20 reconstructed — PLI and larger exporters, not a census
Medium, ₹200–500 crore (count)	60
Export-ready, Medium ₹200–500	15 reconstructed
Medium, ₹100–200 crore (count)	150
Export-ready, Medium ₹100–200	25 reconstructed
Small, ₹10–100 crore (count)	900
Micro, at or below ₹10 crore (count)	1850
MFI on Micro	Thin for a converter. A micro weaver in the same town may use MUDRA. NABARD is relevant only for a rural producer, not for a specified-fabric supplier.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: NTTM and GREAT are grants. PLI Textiles is an incentive for companies that clear an investment threshold. TUFS-successor status for new cases was not confirmed, so it is not listed as open. No micro-converter loan product.

Field	Value
Specific insurance coverage	ECGC for exporters. Fire and machinery for mills. Product liability where the cloth is protective or medical. Receivables from an auto or defence buyer are uninsured.
Venture capital and private equity	The 24 GREAT startups are grant-funded (approved cost ₹12.16 crore, of which the Government of India share was ₹10.79 crore), which is not venture capital. PE that exists sits with larger MMF players, not the converter.
Band method	Universe: a reconstructed ~3,000 converters and specialised mills. The 24 startups and 30 PLI companies are inside the upper bands, not the whole pyramid. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 1%; Medium ₹200–500 2%; Medium ₹100–200 5%; Small 30%; Micro 62%. Share of units, not share of turnover.

AVGC-XR · New candidate · fit 3

Field	Value
Id	avgc
Industry	AVGC-XR
Funded or newly gated wave	AVGC promotion task force, 2022 · state AVGC policies (Karnataka, Telangana, Maharashtra and others) · DPIIT startup certificates in animation, VFX, gaming and comics
Participants	DPIIT certificates and state-policy applicant lists. A studio census is n.p. Freelancers are not firms and are not added.
What was counted	Startup certificates. Not a studio census.
Ancillaries (the MSME ring)	Small studios and vendor benches selling to a publisher or a production house — not the platform and not the college
Activity (manufacturing vs services)	Services
Geography	Bengaluru, Hyderabad, Mumbai, Pune. Chapter 18 virtual work, with a few studio buildings. Not a factory belt.
Mode	Digital
ICAM status	New candidate
Cluster-shape fit (1–5)	3
Why this fit	Buyer delays exist, but the cohort is digital and pan-city, not a physical centre.
HS-4 / services note	No HSN — services
FY2024–25 export	n.p. as a cohort line. It sits, unseparated, inside India's services exports of USD 383.51 billion in FY2024–25 (PIB).
Exporting units	n.p. Services exports are not a TradeStat exporter file.
Gross turnover	n.p.
Domestic vs export turnover	Treat recorded studio sales as mixed. No official domestic-versus-export split for the MSME bench.
Employees	n.p. Task-force job claims are not an ASI count.
Vintage of the wave	2022 (national AVGC task force and the state-policy wave).
Large, above ₹500 crore (count)	25
Export-ready, Large	n.p. — services, no TradeStat exporter count
Medium, ₹200–500 crore (count)	40
Export-ready, Medium ₹200–500	n.p.
Medium, ₹100–200 crore (count)	80
Export-ready, Medium ₹100–200	n.p.
Small, ₹10–100 crore (count)	1500
Micro, at or below ₹10 crore (count)	6355
MFI on Micro	None typical. Freelancers are not an MFI book. Studios use banks or nothing.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: state AVGC incentives are subsidies or space, not a receivable line. No MSME production-finance product verified.
Specific insurance coverage	Professional indemnity and production insurance exist commercially and are rare at the small studio. Client receivables are uninsured. ECGC is a poor fit for a services invoice.
Venture capital and private equity	Moderate venture capital on gaming and a few studios. None on the vendor bench.
Band method	Universe: a reconstructed ~8,000 studios and small vendor firms. Freelancers are excluded. Not a DPIIT extract. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore

Field	Value
	(investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 0%; Medium ₹200–500 1%; Medium ₹100–200 1%; Small 19%; Micro 79%. Share of units, not share of turnover.

Agri-tech & farm machinery digital · New candidate · fit 3

Field	Value
Id	agritech
Industry	Agri-tech & farm machinery digital
Funded or newly gated wave	Digital agriculture and farm-mechanisation schemes through the 2020s · AgriSURE blended and equity capital · custom-hiring and drone-adjacent mechanisation. Startup India certificates are not machinery output.
Participants	DPIIT-recognised agri startups are a certificate count. Farm-machinery MSMEs are a factory population. The two are not added.
What was counted	Startup certificates and, separately, machinery MSMEs
Ancillaries (the MSME ring)	Custom-hiring centres, implement dealers and small machinery fabricators — not the FPO's buyer and not the tractor OEM
Activity (manufacturing vs services)	Both
Geography	Punjab, western Uttar Pradesh, Maharashtra and Karnataka machinery belts, plus a pan-India startup layer that is not a belt.
Mode	Hybrid
ICAM status	New candidate
Cluster-shape fit (1–5)	3
Why this fit	Fabricators sit in real belts, but the digital cohort is pan-India and farm-machinery exports are the wrong turnover.
HS-4 / services note	8432 and 8433 are farm machinery. They are not agri-tech startup turnover and are not quoted as this cohort's export.
FY2024–25 export	n.p. for agri-tech startups. Machinery HS lines are a different industry.
Exporting units	n.a. for the startup cohort. An EPC machinery list would measure factories, not apps.
Gross turnover	n.p. Do not use farm-machinery exports as startup turnover.
Domestic vs export turnover	Treat the service cohort as domestic. Machinery exports, if used at all, belong to a different profile.
Employees	n.p.
Vintage of the wave	2020–21, when digital agriculture schemes and startup recognition scaled together.
Large, above ₹500 crore (count)	20
Export-ready, Large	n.a. as exporters for the digital cohort
Medium, ₹200–500 crore (count)	30
Export-ready, Medium ₹200–500	n.a. as exporters for the digital cohort
Medium, ₹100–200 crore (count)	80
Export-ready, Medium ₹100–200	Domestic offtake via state mechanisation and FPOs for fabricators
Small, ₹10–100 crore (count)	900
Micro, at or below ₹10 crore (count)	2470
MFI on Micro	Active at the custom-hiring and micro-fabricator end through NABARD, MUDRA and FPO credit. The venture-funded startup is outside that channel.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: NABARD, Agriculture Infrastructure Fund, custom-hiring credit, AgriSURE (equity and blended, not MFI). No single agri-tech MSME term loan.
Specific insurance coverage	Equipment and cattle or crop covers are not the startup's receivable cover. PMFBY is farm cover. Custom-hiring receivables are uninsured.
Venture capital and private equity	Moderate private agri venture plus AgriSURE at the startup end. Thin on the fabricator.

Field	Value
Band method	Universe: a reconstructed ~3,500 startups and small fabricators. Certificates and factories are mixed only in this shape sketch and are labelled as such. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 1%; Medium ₹200–500 1%; Medium ₹100–200 2%; Small 26%; Micro 70%. Share of units, not share of turnover.

Bulk drugs & KSMs / APIs · New candidate · fit 3

Field	Value
Id	api
Industry	Bulk drugs & KSMs / APIs
Funded or newly gated wave	PLI Bulk Drugs, 2020, for KSMs, drug intermediates and APIs · bulk-drug parks. The formulation MSME is a different industry.
Participants	PLI Bulk Drugs approvals are a short list of plants. Bulk-drug manufacturing units in the older clusters are a larger population and are not added to the approval list.
What was counted	PLI approvals, with cluster units uncounted separately
Ancillaries (the MSME ring)	Intermediates, solvents, job-work and utilities MSMEs around a bulk-drug park — not the fermentation or reactor plant
Activity (manufacturing vs services)	Manufacturing
Geography	Hyderabad, Visakhapatnam, Ankleshwar, Vapi and the bulk-drug parks. Plants dominate.
Mode	Hybrid
ICAM status	New candidate
Cluster-shape fit (1–5)	3
Why this fit	The park and the reactor are the anchor. The MSME ring is thinner than the policy story and is environmentally gated.
HS-4 / services note	2933, 2941 and related organic headings. Pharmexcil's bulk-drug export is the right basket. Do not use the full drugs-and-pharmaceuticals USD 30.47 billion.
FY2024–25 export	Pharmexcil, 14 June 2025: bulk drugs USD 4.87 billion. Formulations are outside this figure.
Exporting units	Pharmexcil membership is a proxy, not a TradeStat count.
Gross turnover	n.p. as MSME-ring turnover. PLI sales are beneficiary sales of approved plants.
Domestic vs export turnover	Bulk-drug export USD 4.87 billion is official. Domestic residual of plant turnover is n.p., so no percentage is stated.
Employees	ASI FY2024–25 pharma factories: 10.92 lakh persons. That is formulations plus bulk drugs, not the ancillary ring.
Vintage of the wave	2020 (PLI Bulk Drugs). Parks follow the same wave.
Large, above ₹500 crore (count)	40
Export-ready, Large	25 reconstructed from the exporting bulk-drug set
Medium, ₹200–500 crore (count)	70
Export-ready, Medium ₹200–500	20 reconstructed
Medium, ₹100–200 crore (count)	140
Export-ready, Medium ₹100–200	30 reconstructed
Small, ₹10–100 crore (count)	550
Micro, at or below ₹10 crore (count)	700
MFI on Micro	None typical. Pollution-control and working-capital finance is a bank file.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: PLI Bulk Drugs is an incentive to approved applicants. Park plots are allotments, not loans. No micro-intermediate MFI channel.
Specific insurance coverage	Pollution liability, fire and marine. Product liability on an API is commercial. Plant receivables are uninsured. ECGC for the exporter of record, who is usually the plant.
Venture capital and private equity	Thin on the job-work unit. Strategic and PE capital appears on larger pharma groups, which are the anchor.
Band method	Universe: a reconstructed ~1,500 bulk-drug and intermediate units. PLI plants are in Large. Not a Pharmexcil extract. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10

Field	Value
	crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 3%; Medium ₹200–500 5%; Medium ₹100–200 9%; Small 36%; Micro 47%. Share of units, not share of turnover.

Cybersecurity services · New candidate · fit 3

Field	Value
Id	cyber
Industry	Cybersecurity services
Funded or newly gated wave	CERT-In directions, 2022 · public-sector security audits · DPDP Act rules raise demand. None of these create an MSME factory cluster.
Participants	CERT-In empanelled auditors are a list. DPIIT cyber startups are another. They are not added.
What was counted	Empanelled auditors and startup certificates
Ancillaries (the MSME ring)	Small audit and managed-service firms. They are vendors to banks and government, and they are also the kind of firm that should be a member, not a centre cohort.
Activity (manufacturing vs services)	Services
Geography	Bengaluru, Hyderabad, NCR, Pune. Virtual delivery. No belt.
Mode	Digital
ICAM status	New candidate
Cluster-shape fit (1–5)	3
Why this fit	A services market with no physical MSME ring a Capability Centre should enrol.
HS-4 / services note	No HSN — services
FY2024–25 export	n.p. inside services exports of USD 383.51 billion, FY2024–25. Not separable here.
Exporting units	n.p.
Gross turnover	n.p.
Domestic vs export turnover	n.p. Do not invent a split.
Employees	n.p.
Vintage of the wave	2022 (CERT-In directions).
Large, above ₹500 crore (count)	30
Export-ready, Large	n.p. — services
Medium, ₹200–500 crore (count)	40
Export-ready, Medium ₹200–500	n.p.
Medium, ₹100–200 crore (count)	80
Export-ready, Medium ₹100–200	n.p.
Small, ₹10–100 crore (count)	900
Micro, at or below ₹10 crore (count)	2950
MFI on Micro	None typical.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: none. These firms are often the delivery partner, not the borrower the centre was built for.
Specific insurance coverage	Professional indemnity and cyber cover are the firm's own product market as well as its need. Client receivables are uninsured.
Venture capital and private equity	Moderate on product startups. The audit shop is bootstrapped. Either way this is not a cluster PE gap the centre should fill.
Band method	Universe: a reconstructed ~4,000 service firms. Not an empanelment extract. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500

Field	Value
	crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 1%; Medium ₹200–500 1%; Medium ₹100–200 2%; Small 22%; Micro 74%. Share of units, not share of turnover.

Data-centre ancillaries · New candidate · fit 3

Field	Value
Id	dc-ancillary
Industry	Data-centre ancillaries
Funded or newly gated wave	State data-centre policies from about 2020 (Uttar Pradesh, Maharashtra, Tamil Nadu and others) and the national data-centre push. The operator is not the cohort.
Participants	Public counts are of operating and announced campuses, not of vendors. Vendor population is n.p.
What was counted	No official vendor census. Campuses are a different unit and are not used as the participant count.
Ancillaries (the MSME ring)	Electrical panels, precision cooling, racks, fire suppression, fit-out and facilities MSMEs selling to the campus operator
Activity (manufacturing vs services)	Both
Geography	Navi Mumbai, Chennai, Hyderabad, Noida and Bengaluru campus clusters. Vendors are wider than the campus fence.
Mode	Hybrid
ICAM status	New candidate
Cluster-shape fit (1–5)	3
Why this fit	Offtake is visible, but the anchor is the campus operator and the MSME ring is not a tight factory belt.
HS-4 / services note	No single heading. Electrical and cooling goods fall under 8537, 8415 and others. Do not assign an export value.
FY2024–25 export	n.p. Campus offtake is domestic.
Exporting units	n.a. as exporters.
Gross turnover	n.p. Announced campus capex is not vendor sales.
Domestic vs export turnover	Treat as domestic. The buyer is the data-centre operator.
Employees	n.p. for vendors. Campus headcount is not the ring.
Vintage of the wave	2020, when state data-centre policies and hyperscale announcements created a vendor wave.
Large, above ₹500 crore (count)	20
Export-ready, Large	n.a. as exporters — domestic campus offtake
Medium, ₹200–500 crore (count)	30
Export-ready, Medium ₹200–500	n.a. as exporters
Medium, ₹100–200 crore (count)	50
Export-ready, Medium ₹100–200	n.a. as exporters
Small, ₹10–100 crore (count)	400
Micro, at or below ₹10 crore (count)	700
MFI on Micro	Thin. MUDRA does not fund a panel shop's retention cycle. No sector MFI.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: none for the vendor. Infrastructure finance sits with the campus.
Specific insurance coverage	Contractors' all-risk during fit-out. Retention and milestone receivables from the operator are uninsured. Fire is the operator's cover.
Venture capital and private equity	Deep in data-centre infrastructure funds. None on the panel and fit-out MSME.
Band method	Universe: a reconstructed ~1,200 vendors. Not a ministry list. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore

Field	Value
	(outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 2%; Medium ₹200–500 3%; Medium ₹100–200 4%; Small 33%; Micro 58%. Share of units, not share of turnover.

Ethanol, biofuels & SAF feedstock · New candidate · fit 3

Field	Value
Id	ethanol
Industry	Ethanol, biofuels & SAF feedstock
Funded or newly gated wave	National Policy on Biofuels, 2018 · ethanol blended petrol programme accelerated toward 20% · interest subvention on distillery capacity · SAF is a later refinery topic, not an MSME plant
Participants	Distilleries and grain or molasses plants are a few hundred large units. FPO and feedstock collection points are a different and much larger population. They are not added.
What was counted	Distillery plants, with FPO collection stated separately
Ancillaries (the MSME ring)	FPO and farmer collection, residue aggregation and local transport — not the OMC and not the distillery
Activity (manufacturing vs services)	Manufacturing
Geography	Uttar Pradesh, Maharashtra, Karnataka and Bihar distillery belts for the plants. Collection is district-wide. A centre would have to pick one feedstock belt.
Mode	Traditional
ICAM status	New candidate
Cluster-shape fit (1–5)	3
Why this fit	The plant is an anchor and the OMC is the buyer. The micro tail is real but spread across districts.
HS-4 / services note	Do not use 2207 as the ethanol-blending story. OMC offtake is domestic blending, not that export line.
FY2024–25 export	n.p. for the blending programme.
Exporting units	n.a. as exporters.
Gross turnover	n.p. for the FPO ring. Distillery capex under interest subvention is not FPO turnover.
Domestic vs export turnover	Treat as domestic. The buyer is the oil marketing company.
Employees	n.p. for collection. Distillery ASI employment is not the micro ring.
Vintage of the wave	2018 policy, with the sharp capacity wave from about 2021 as the 20% blend target hardened.
Large, above ₹500 crore (count)	80
Export-ready, Large	n.a. as exporters — OMC domestic offtake
Medium, ₹200–500 crore (count)	40
Export-ready, Medium ₹200–500	n.a. as exporters
Medium, ₹100–200 crore (count)	80
Export-ready, Medium ₹100–200	n.a. as exporters
Small, ₹10–100 crore (count)	600
Micro, at or below ₹10 crore (count)	4200
MFI on Micro	Active on the micro collection tail: NABARD, FPO credit and SHG linkage in the feedstock districts. That is not distillery finance.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: NABARD and FPO credit, Agriculture Infrastructure Fund for aggregation. Interest subvention on distilleries is the anchor's scheme. AgriSURE is equity or blended capital, not an MFI loan.
Specific insurance coverage	PMFBY insures the crop, not the collector's receivable. Fire and boiler sit on the distillery. FPO receivables from a distillery or OMC agent are largely uninsured.
Venture capital and private equity	Thin on the FPO. Distillery and SAF projects use project finance and strategic capital.

Field	Value
Band method	Universe: a reconstructed ~5,000 collection and aggregation units, with distilleries placed in Large. Not an OMCs vendor extract. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 2%; Medium ₹200–500 1%; Medium ₹100–200 1%; Small 12%; Micro 84%. Share of units, not share of turnover.

Geospatial & drones-as-a-service · New candidate · fit 3

Field	Value
Id	geospatial
Industry	Geospatial & drones-as-a-service
Funded or newly gated wave	Geospatial guidelines liberalised in 2021 · Drone Rules, 2021, for the aircraft the service uses · survey and mapping tenders on GeM. Manufacturing of drones is the separate demo row.
Participants	DPIIT certificates and GeM-registered survey vendors. Remote-pilot certificates (16,000 as of the 26 July 2024 PIB) are people, not firms.
What was counted	Service firms and certificates. Pilot certificates are not enterprises.
Ancillaries (the MSME ring)	Small survey and mapping firms and drone-service operators — not the drone manufacturer and not the government buyer
Activity (manufacturing vs services)	Services
Geography	Pan-India project work. Firms cluster lightly in Bengaluru, Hyderabad and Delhi. Not a belt.
Mode	Digital
ICAM status	New candidate
Cluster-shape fit (1–5)	3
Why this fit	GeM and infrastructure buyers are visible, but the firms are a virtual layer on top of the drone demo, not a second centre.
HS-4 / services note	No HSN — services
FY2024–25 export	n.p. Domestic GeM and project offtake. Do not use drone-goods headings.
Exporting units	n.a.
Gross turnover	n.p.
Domestic vs export turnover	Treat as domestic.
Employees	n.p. Remote-pilot certificates are not jobs in this row.
Vintage of the wave	2021 (geospatial guidelines and Drone Rules).
Large, above ₹500 crore (count)	10
Export-ready, Large	n.a. as exporters
Medium, ₹200–500 crore (count)	15
Export-ready, Medium ₹200–500	n.a. as exporters
Medium, ₹100–200 crore (count)	40
Export-ready, Medium ₹100–200	n.a. as exporters
Small, ₹10–100 crore (count)	400
Micro, at or below ₹10 crore (count)	1035
MFI on Micro	None typical.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: none. GeM is a buyer channel, not a loan. Drone PLI closed and belonged to manufacturers.
Specific insurance coverage	DGCA third-party liability sits on the operator. Professional indemnity for a bad survey is rare. Government-tender receivables are uninsured.
Venture capital and private equity	Thin. A few drone-service startups have raised rounds. The survey shop has not.
Band method	Universe: a reconstructed ~1,500 survey and drone-service firms. Pilot certificates are excluded. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment

Field	Value
	ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 1%; Medium ₹200–500 1%; Medium ₹100–200 2%; Small 27%; Micro 69%. Share of units, not share of turnover.

Green hydrogen ancillaries · New candidate · fit 3

Field	Value
Id	ghydrogen
Industry	Green hydrogen ancillaries
Funded or newly gated wave	National Green Hydrogen Mission, 2023. Incentives and offtake sit with energy and industrial groups.
Participants	Mission awards are to large sponsors. An ancillary MSME census is n.p.
What was counted	Awarded sponsors. Not an MSME count.
Ancillaries (the MSME ring)	Possible later: skid fabrication, valves, electrical balance. That ring is not observable as a cohort today. The electrolyser plant is not the cohort.
Activity (manufacturing vs services)	Manufacturing
Geography	Coastal and refinery states where sponsors have announced plants. Pan-India announcements, no MSME belt.
Mode	Hybrid
ICAM status	New candidate
Cluster-shape fit (1–5)	3
Why this fit	Capital-heavy anchors. No MSME buyer book and no belt a centre could open.
HS-4 / services note	No cohort heading. Do not borrow industrial-gas or electrical headings as hydrogen exports.
FY2024–25 export	n.p.
Exporting units	n.a.
Gross turnover	n.p. Mission outlay and plant capex are not sales.
Domestic vs export turnover	Treat as domestic project offtake if and when equipment is sold. No split is stated.
Employees	n.p.
Vintage of the wave	2023 (National Green Hydrogen Mission).
Large, above ₹500 crore (count)	15
Export-ready, Large	n.a. as exporters
Medium, ₹200–500 crore (count)	10
Export-ready, Medium ₹200–500	n.a. as exporters
Medium, ₹100–200 crore (count)	10
Export-ready, Medium ₹100–200	n.a. as exporters
Small, ₹10–100 crore (count)	30
Micro, at or below ₹10 crore (count)	55
MFI on Micro	None typical.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: NGHM incentives are for the sponsor. No MSME hydrogen product.
Specific insurance coverage	Construction and marine covers sit on the project. Nothing cohort-specific.
Venture capital and private equity	Deep on sponsor balance sheets and climate platforms. None on a vendor ring that is not there.
Band method	Universe: a reconstructed sketch of about 120 possible vendors and sponsors. It is a ceiling, not a census, and it is not a cohort. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April

Field	Value
	2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 13%; Medium ₹200–500 8%; Medium ₹100–200 8%; Small 25%; Micro 46%. Share of units, not share of turnover.

Semiconductors & OSAT ancillaries · New candidate · fit 3

Field	Value
Id	semi
Industry	Semiconductors & OSAT ancillaries
Funded or newly gated wave	India Semiconductor Mission, 2021 · DLI for design · fiscal support for one fab, OSAT/ATMP and a compound fab. MeitY, September 2025: 1 fab, 8 OSAT/ATMP, 1 compound, 23 design-linked applicants.
Participants	10 approved plants across six states. Separately, 23 design-linked applicants. Ancillary workshops are not yet a published census.
What was counted	Approved plants and design-linked applicants — two units, not added
Ancillaries (the MSME ring)	Specialty gases, chemicals, cleanroom trades, jigs, packaging and facilities MSMEs around Sanand and Dholera once a fab offtakes — not the fab itself
Activity (manufacturing vs services)	Manufacturing
Geography	Sanand and Dholera in Gujarat, plus the other approved-plant states. No dense MSME belt yet.
Mode	Hybrid
ICAM status	New candidate
Cluster-shape fit (1–5)	3
Why this fit	The plant is the anchor. The ancillary ring a centre would enrol is still thin and has no fab offtake to stand on.
HS-4 / services note	8541, 8542. Do not quote the electronics-goods basket as OSAT exports.
FY2024–25 export	n.p. for this cohort. ISM figures are capacity and committed capex, not sales.
Exporting units	n.a. as a TradeStat count. The 10 plants are not an exporter census.
Gross turnover	n.p. ISM committed support is about ₹1.6 lakh crore of capex, not turnover.
Domestic vs export turnover	Capex is not sales. Treat current ancillary activity as domestic until a fab offtakes. No export share is stated.
Employees	n.p. for the ancillary ring. Plant payrolls are not the cohort.
Vintage of the wave	2021 (ISM approvals). Design-linked certificates are the same wave.
Large, above ₹500 crore (count)	10
Export-ready, Large	n.a. as exporters — plants are anchors, not the MSME export count
Medium, ₹200–500 crore (count)	8
Export-ready, Medium ₹200–500	n.a. as exporters
Medium, ₹100–200 crore (count)	15
Export-ready, Medium ₹100–200	n.a. as exporters
Small, ₹10–100 crore (count)	40
Micro, at or below ₹10 crore (count)	80
MFI on Micro	None typical. Project finance and venture on design houses. No NBFC-MFI or SHG channel.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: ISM and DLI are fiscal support to approved applicants, not an MSME working-capital line. No dedicated ancillary-MSME product.
Specific insurance coverage	Construction all-risk and erection on the plants. The ancillary ring has ordinary fire and workmen covers. Receivables from a fab do not exist yet, so they are not insured.
Venture capital and private equity	Deep on the approved groups and on a few design startups. None on the cleanroom-trade MSME.

Field	Value
Band method	Universe: a reconstructed ancillary ring of about 150 units around the approved plants, plus the plants themselves in Large. This is a shape sketch, not a factory census. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 7%; Medium ₹200–500 5%; Medium ₹100–200 10%; Small 26%; Micro 52%. Share of units, not share of turnover.

Specialty steel (MSME conversion) · New candidate · fit 3

Field	Value
Id	specialty-steel
Industry	Specialty steel (MSME conversion)
Funded or newly gated wave	PLI Specialty Steel, 2021. The incentive is on the melt shop and the large processor. MSME conversion and rerolling is the ring.
Participants	PLI Specialty Steel applicants are a short approved list. Rerollers and converters are a different population and are not added to it.
What was counted	PLI applicants, with rerollers uncounted
Ancillaries (the MSME ring)	Rerollers, pickling, cutting and component forgers who could move into a specialty grade — not the melt shop
Activity (manufacturing vs services)	Manufacturing
Geography	Jamshedpur, Hazira, Dolvi and the older rerolling clusters of Bhavnagar, Mandi Gobindgarh and Raipur. The PLI plant and the reroller are not in the same lane.
Mode	Traditional
ICAM status	New candidate
Cluster-shape fit (1–5)	3
Why this fit	Anchors are capital-heavy. The MSME conversion tail is real and scattered, and it is not the PLI unit.
HS-4 / services note	7208, 7209, 7210, 7225 and related flat and alloy headings. Engineering-goods exports of USD 116.67 billion are not this line.
FY2024–25 export	n.p. as a specialty-steel MSME line. The parent engineering-goods total is USD 116.67 billion, FY2024–25, and is too wide to use.
Exporting units	n.p.
Gross turnover	n.p. for the MSME conversion ring. PLI investment is the plant's capex.
Domestic vs export turnover	n.p. Do not apply the engineering-goods export share to rerollers.
Employees	n.p. for the ring.
Vintage of the wave	2021 (PLI Specialty Steel).
Large, above ₹500 crore (count)	25
Export-ready, Large	10 reconstructed large mills — domestic and export, not a census
Medium, ₹200–500 crore (count)	40
Export-ready, Medium ₹200–500	8 reconstructed
Medium, ₹100–200 crore (count)	80
Export-ready, Medium ₹100–200	12 reconstructed
Small, ₹10–100 crore (count)	250
Micro, at or below ₹10 crore (count)	205
MFI on Micro	None typical. Rerollers use bank cash credit. MFI products do not fund a heat.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: PLI Specialty Steel is the plant's incentive. No MSME conversion loan verified.
Specific insurance coverage	Fire, marine and boiler on the mill. Receivables from an auto or project buyer are uninsured. ECGC only if the reroller itself exports.
Venture capital and private equity	None on the reroller. Strategic capital sits on the listed steel groups.
Band method	Universe: a reconstructed ~600 rerollers and converters. PLI plants sit in Large. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore),

Field	Value
	Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 4%; Medium ₹200–500 7%; Medium ₹100–200 13%; Small 42%; Micro 34%. Share of units, not share of turnover.

E-commerce logistics & warehousing · Phase II · fit 4

Field	Value
Id	logistics
Industry	E-commerce logistics & warehousing
Funded or newly gated wave	GST and e-way bill from 2017 · the e-commerce warehouse wave through 2020 · Open Network for Digital Commerce is a later rail. Phase II, with a Bhiwandi-type annex already the delivery form.
Participants	Warehouse counts and transporter registrations are different units. Fleet owners are a third. They are not added. No single official firm census.
What was counted	No single census. Transporters, warehouses and fleet owners are separate units.
Ancillaries (the MSME ring)	Last-mile fleet owners, small warehouses and loaders — not the platform and not the 3PL major
Activity (manufacturing vs services)	Services
Geography	Bhiwandi, Bilaspur–Gurugram, Hoskote and Sriperumbudur warehouse belts. Last-mile riders are city-wide.
Mode	Hybrid
ICAM status	Phase II
Cluster-shape fit (1–5)	4
Why this fit	Thick micro fleet tail and named warehouse belts, with platform payment as the offtake. Already the shape of an annex, not a new discovery.
HS-4 / services note	No HSN — services
FY2024–25 export	n.p. Domestic. Do not use merchandise export totals.
Exporting units	n.a.
Gross turnover	n.p. GMV of e-commerce is not fleet turnover.
Domestic vs export turnover	Treat as domestic.
Employees	n.p. Platform rider counts are not fleet-owner enterprises.
Vintage of the wave	2017–2020 (e-way bill and the warehouse build-out). Phase II.
Large, above ₹500 crore (count)	40
Export-ready, Large	n.a. as exporters
Medium, ₹200–500 crore (count)	60
Export-ready, Medium ₹200–500	n.a. as exporters
Medium, ₹100–200 crore (count)	150
Export-ready, Medium ₹100–200	n.a. as exporters
Small, ₹10–100 crore (count)	4000
Micro, at or below ₹10 crore (count)	15750
MFI on Micro	Active on the last-mile micro fleet: vehicle NBFCs, MUDRA and some NBFC-MFI household top-ups. That credit is the EMI the payment delay then breaks.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: vehicle NBFCs are the real product for a small fleet. They are not a Catalyst loan. No e-commerce-MSME guarantee beyond CGTMSE was verified.
Specific insurance coverage	Vehicle, goods-in-transit and warehouse covers are commercial and uneven at the micro fleet. Platform payouts are uninsured. ECGC is n.a.

Field	Value
Venture capital and private equity	Deep on platforms and large 3PLs. None on the fleet owner.
Band method	Universe: a reconstructed ~20,000 fleet owners and small warehouses in the major belts. Riders who are not enterprises are excluded. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 0%; Medium ₹200–500 0%; Medium ₹100–200 1%; Small 20%; Micro 79%. Share of units, not share of turnover.

Mobile & electronics manufacturing · Phase II · fit 4

Field	Value
Id	electronics
Industry	Mobile & electronics manufacturing
Funded or newly gated wave	National Policy on Electronics, 2019 · PLI Large-Scale Electronics, 2020, 32 beneficiary companies · SPECS · later component incentives. Phase II: do not treat the assembly wave as undiscovered.
Participants	32 PLI LSEM companies. More than 300 mobile manufacturing units (MeitY). Units are not enterprises, and neither count is the MSME component ring.
What was counted	PLI companies and manufacturing units — not the supplier census
Ancillaries (the MSME ring)	Tool rooms, moulders, metal and plastic parts, and component MSMEs selling to an assembler — not Foxconn, Dixon, Tata Electronics or the other PLI principals
Activity (manufacturing vs services)	Manufacturing
Geography	Noida–Greater Noida, Sriperumbudur–Oragadam, Sri City. The ring, if dense, is in those catchments.
Mode	Hybrid
ICAM status	Phase II
Cluster-shape fit (1–5)	4
Why this fit	Phase II assembly is already known. The uncounted supplier ring in two or three belts is the only centre question, and it is not yet listed.
HS-4 / services note	8517. Smartphones at 8-digit 85171300 sit inside 8517. MeitY's wider electronics basket is not one heading.
FY2024–25 export	DGCIS principal commodity electronic goods: USD 38.58 billion, FY2024–25. MeitY: electronics exports about ₹3.26 lakh crore; mobile phones about ₹2 lakh crore. Smartphones about USD 24.84 billion are the 85171300 line inside 8517.
Exporting units	n.p. Export growth is concentrated in the PLI assembly tier. That is not an MSME exporter count.
Gross turnover	MeitY production, not a turnover census: electronics goods ₹11.32 lakh crore in FY2024–25. Mobile phones ₹5.45 lakh crore. PLI cumulative production is a different, multi-year series (₹8.45 lakh crore to June 2025 in the 23 July 2025 PIB).
Domestic vs export turnover	MeitY, same release family: exports about ₹3.26 lakh crore against production ₹11.32 lakh crore, about 29% export and 71% domestic. This is a ratio of two MeitY estimates, not a GSTN split. The MSME ring's own split is n.p.
Employees	MeitY: about 25 lakh electronics jobs. PLI LSEM direct jobs 1,30,330 to June 2025. Scheme jobs are not industry employment, and neither figure is the supplier ring.
Vintage of the wave	2019–20 (NPE and PLI). The component-tier push is later and thinner.
Large, above ₹500 crore (count)	80
Export-ready, Large	The 32 PLI companies dominate exports — they are not the MSME export-ready count
Medium, ₹200–500 crore (count)	120
Export-ready, Medium ₹200–500	40 reconstructed component exporters
Medium, ₹100–200 crore (count)	300
Export-ready, Medium ₹100–200	80 reconstructed
Small, ₹10–100 crore (count)	3500
Micro, at or below ₹10 crore (count)	8000
MFI on Micro	Thin. MUDRA may touch a micro packer. A tool room selling to an EMS company needs a bank line or TReDS.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: PLI LSEM is not open to this ring. TReDS works only if the assembler onboards the supplier. No component-MSME scheme was the centre's to run.

Field	Value
Specific insurance coverage	ECGC where the MSME itself exports, which is rare. The principal carries marine cover on imported inputs. Supplier receivables are uninsured.
Venture capital and private equity	Deep at the assembler and a few listed EMS companies. None on the tool room.
Band method	Universe: a reconstructed ~12,000 suppliers in the three assembly catchments. The 300 manufacturing units are not this pyramid. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 1%; Medium ₹200–500 1%; Medium ₹100–200 2%; Small 29%; Micro 67%. Share of units, not share of turnover.

Solar PV modules & BOS · Phase II · fit 4

Field	Value
Id	solar
Industry	Solar PV modules & BOS
Funded or newly gated wave	ALMM order, 2 January 2019; first module list 10 March 2021 · PLI high-efficiency modules, tranche I three bidders and tranche II eleven · cell ALMM from 2025–26. Phase II.
Participants	100 ALMM manufacturers and 123 units at the 100 GW announcement, up from 21 manufacturers in 2021. PLI bidders are a subset. Installers and BOS MSMEs are a different population and are not added.
What was counted	ALMM manufacturers. Installers are a separate, uncounted service population.
Ancillaries (the MSME ring)	Balance-of-system fabricators, structures, cables, and O&M MSMEs — not the module gigafactory and not the rooftop app
Activity (manufacturing vs services)	Manufacturing
Geography	Module capacity is concentrated in Gujarat, with large lines also in Tamil Nadu, Telangana and elsewhere. BOS fabrication is wider. Projects in Rajasthan are generation, not manufacturing.
Mode	Hybrid
ICAM status	Phase II
Cluster-shape fit (1–5)	4
Why this fit	Phase II module plants are anchors. BOS and O&M MSMEs are the ring, thinner than the GW headlines and more geographically spread.
HS-4 / services note	8541. Cells, wafers and modules split at 8-digit. This desk did not pull the FY25 8-digit export.
FY2024–25 export	n.p. as a clean module line in the DGCIS principal-commodity release used here. ALMM capacity is not exports.
Exporting units	n.p. ALMM enlistment is not an exporter count.
Gross turnover	n.p. Enlisted capacity crossed 100 GW and was later reported near 145 GW. Capacity is not sales. PLI installed capacity as on 30 June 2025 was about 18.5 GW modules under the scheme, which is also capacity.
Domestic vs export turnover	n.p. Do not convert GW into a domestic-export split.
Employees	n.p.
Vintage of the wave	2021 (first ALMM list and the PLI awards).
Large, above ₹500 crore (count)	40
Export-ready, Large	Domestic and some module exports — exporter count n.p.
Medium, ₹200–500 crore (count)	30
Export-ready, Medium ₹200–500	n.p.
Medium, ₹100–200 crore (count)	80
Export-ready, Medium ₹100–200	n.p.
Small, ₹10–100 crore (count)	1500
Micro, at or below ₹10 crore (count)	4350
MFI on Micro	Thin on the fabricator. A rooftop installer sometimes uses MUDRA. That installer is not the manufacturing cohort.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: IREDA and bank project finance serve plants and power projects. PLI is the awarded manufacturer's incentive. No BOS-MSME line verified.

Field	Value
Specific insurance coverage	Marine, erection all-risk and performance covers sit on the project. Fabricator receivables from an EPC are uninsured. ECGC if the module maker exports.
Venture capital and private equity	Deep on listed and sponsored module makers. None on the structure fabricator.
Band method	Universe: a reconstructed ~6,000 BOS, structure and O&M firms, with ALMM manufacturers in the upper bands. Installer micro-enterprises inflate Micro and are a service tail, labelled as such. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 1%; Medium ₹200–500 0%; Medium ₹100–200 1%; Small 25%; Micro 73%. Share of units, not share of turnover.

EV vehicles & auto-tech components · Phase II · fit 3

Field	Value
Id	ev
Industry	EV vehicles & auto-tech components
Funded or newly gated wave	FAME-II, ended 31 March 2024, ₹6,559 crore reimbursed to OEMs · PM E-DRIVE, 1 October 2024 to 31 March 2026, ₹10,900 crore · PLI Auto, 15 September 2021, outlay ₹25,938 crore, 82 applicants as on 30 November 2025. Phase II.
Participants	82 PLI Auto applicants and 278 manufacturing units as on 30 November 2025. FAME and PM E-DRIVE OEM registrations are a different list. ACMA's 1,100 members are the wider component industry, not an EV-only census. None of these are added together.
What was counted	PLI applicants and units. OEM registrations and ACMA members are separate.
Ancillaries (the MSME ring)	Tier-2 and Tier-3 part makers pulled into a 50% domestic-value-addition part — excluding the pack and BMS ring, which has its own row, and excluding the OEM
Activity (manufacturing vs services)	Manufacturing
Geography	Pune–Chakan–Talegaon, Hosur–Krishnagiri, Sriperumbudur, Manesar–Bawal, Sanand, Pithampur. Phase II belts, not a new discovery.
Mode	Hybrid
ICAM status	Phase II
Cluster-shape fit (1–5)	3
Why this fit	The vehicle OEM is the anchor. The component belt is real, but the pack row is the better new centre and this row should not be opened beside it.
HS-4 / services note	8703 is all passenger cars, not EV-only. 8708 is parts. Do not quote either heading as EV export.
FY2024–25 export	n.p. for EV-only. ACMA component exports were USD 22.9 billion in FY2024–25 and include conventional parts. They are not this row's figure.
Exporting units	n.p.
Gross turnover	n.p. for EV-only. PLI Auto determined sales were ₹32,879 crore cumulative to 30 September 2025, which is scheme sales, not industry turnover. ACMA's ₹6.73 lakh crore is the wider component industry.
Domestic vs export turnover	Treat the EV OEM wave as domestic. The buyer incentive is FAME and PM E-DRIVE. No export share is stated.
Employees	PLI Auto: 48,974 scheme jobs to 30 September 2025. ASI FY2024–25 motor-vehicle factories: 14.80 lakh persons, the parent industry. ACMA's undated 1.5 million direct-job statement is not pinned to this row.
Vintage of the wave	2019 FAME-II; PLI performance from FY2023–24. The supplier population is older than the wave.
Large, above ₹500 crore (count)	35
Export-ready, Large	Domestic offtake — n.a. as an EV exporter census
Medium, ₹200–500 crore (count)	50
Export-ready, Medium ₹200–500	Domestic OEM suppliers, count n.p.
Medium, ₹100–200 crore (count)	120
Export-ready, Medium ₹100–200	Domestic OEM suppliers, count n.p.
Small, ₹10–100 crore (count)	1200
Micro, at or below ₹10 crore (count)	2595
MFI on Micro	Thin. A micro job-shop may use MUDRA. It is not the cluster's financing system.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: PLI Auto and PM E-DRIVE are not loans to the Tier-3 shop. TReDS where the OEM onboards the supplier. Vehicle NBFCs finance the buyer of the vehicle.

Field	Value
Specific insurance coverage	ECGC for a component exporter in the wider ACMA sense. EV-OEM receivables are uninsured. Product liability sits with the OEM.
Venture capital and private equity	Deep on OEM and Tier-1 EV platforms. Thin on the Tier-3 machinist. The pack row is where the MSME capital gap is sharper.
Band method	Universe: a reconstructed ~4,000 EV-linked component firms. ACMA's 1,100 members are not this pyramid. Pack and BMS units are excluded; they sit on the battery row. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 1%; Medium ₹200–500 1%; Medium ₹100–200 3%; Small 30%; Micro 65%. Share of units, not share of turnover.

Education technology & skilling · Phase II · fit 3

Field	Value
Id	edtech
Industry	Education technology & skilling
Funded or newly gated wave	Skill India and apprenticeship schemes · the 2020 remote-learning wave · National Education Policy skilling chapters. Phase II, and a delivery partner rather than a cohort.
Participants	DPIIT edtech certificates and NSDC training partners are different lists. They are not added.
What was counted	Startup certificates and training-partner empanelments
Ancillaries (the MSME ring)	Training partners and content vendors. The college or the sector skill council is the partner, not the MSME cohort.
Activity (manufacturing vs services)	Services
Geography	Pan-India and online. No belt.
Mode	Digital
ICAM status	Phase II
Cluster-shape fit (1–5)	3
Why this fit	A delivery partner for apprenticeship inside a real cluster, not a cluster of its own.
HS-4 / services note	No HSN — services
FY2024–25 export	n.p. inside services exports of USD 383.51 billion. Not separable here.
Exporting units	n.p.
Gross turnover	n.p.
Domestic vs export turnover	Treat as domestic.
Employees	n.p. Placement claims are not employment in a cohort.
Vintage of the wave	2020 (remote-learning scale-up inside an older training industry).
Large, above ₹500 crore (count)	20
Export-ready, Large	n.a. as exporters
Medium, ₹200–500 crore (count)	30
Export-ready, Medium ₹200–500	n.a. as exporters
Medium, ₹100–200 crore (count)	50
Export-ready, Medium ₹100–200	n.a. as exporters
Small, ₹10–100 crore (count)	700
Micro, at or below ₹10 crore (count)	2200
MFI on Micro	None typical. Fee-financing NBFCs lend to learners, not to a training-partner's receivable.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: scheme training contracts are grants or outcome payments. They are not a cluster loan. Learner NBFCs are out of charter.
Specific insurance coverage	Liability for a training centre is commercial. Outcome-payment receivables are uninsured.
Venture capital and private equity	Was deep on consumer edtech platforms and has since concentrated. None of it is a training-partner book the centre should intermediate.
Band method	Universe: a reconstructed ~3,000 training and edtech firms. Not an NSDC extract. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500

Field	Value
	crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 1%; Medium ₹200–500 1%; Medium ₹100–200 2%; Small 23%; Micro 73%. Share of units, not share of turnover.

Fintech & BC-agent networks · Phase II · fit 3

Field	Value
Id	fintech
Industry	Fintech & BC-agent networks
Funded or newly gated wave	Business-correspondent guidelines · UPI scale-up · Account Aggregator, 2021. Phase II. The firms are capital providers or agents, not a borrowing cluster.
Participants	RBI-regulated fintechs and BC networks are different regulatory populations. Agent headcount is people, not enterprises. They are not added.
What was counted	Regulated entities and agent networks — agents are not enterprises
Ancillaries (the MSME ring)	None that a Capability Centre should enrol. The BC agent is a distribution point. The fintech is a member or a lender.
Activity (manufacturing vs services)	Services
Geography	Pan-India agents. Firms in Mumbai, Bengaluru and NCR. No factory belt.
Mode	Digital
ICAM status	Phase II
Cluster-shape fit (1–5)	3
Why this fit	A delivery and capital rail for the five centres, not a cohort.
HS-4 / services note	No HSN — services
FY2024–25 export	n.p. Do not place this inside merchandise trade.
Exporting units	n.a.
Gross turnover	n.p. Payment value and credit books are not MSME turnover.
Domestic vs export turnover	n.a. This is not a goods cohort.
Employees	n.p. Agent counts are not employment in a cluster.
Vintage of the wave	The agent model is older. The wave used here is the Account Aggregator framework from 2021, inside Phase II.
Large, above ₹500 crore (count)	40
Export-ready, Large	n.a.
Medium, ₹200–500 crore (count)	30
Export-ready, Medium ₹200–500	n.a.
Medium, ₹100–200 crore (count)	50
Export-ready, Medium ₹100–200	n.a.
Small, ₹10–100 crore (count)	400
Micro, at or below ₹10 crore (count)	1480
MFI on Micro	The NBFC-MFI is often the regulated entity itself. That is the opposite of a borrower cohort. Do not code the MFI as the micro tail of this row.
Specific lending programmes	These entities originate or distribute MUDRA, microfinance and business loans. They are not the borrowers. Listing CGTMSE here would invert the charter.
Specific insurance coverage	They distribute covers. They are not the uninsured MSME receivable.
Venture capital and private equity	Deep. Fintechs are capitalled firms and capital providers. That depth is a reason to invite them as members, not to open a centre.

Field	Value
Band method	Universe: a reconstructed ~2,000 fintech enterprises. BC agents are excluded because they are not the firm. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 2%; Medium ₹200–500 1%; Medium ₹100–200 3%; Small 20%; Micro 74%. Share of units, not share of turnover.

Healthtech & care delivery · Phase II · fit 3

Field	Value
Id	healthtech
Industry	Healthtech & care delivery
Funded or newly gated wave	Telemedicine practice guidelines, 2020 · Ayushman Bharat Digital Mission health accounts and registries · state care-delivery contracts. Phase II. Not medical devices.
Participants	DPIIT healthtech certificates and empanelled care providers are different lists. They are not the 700 device manufacturers and are not added to them.
What was counted	Startup certificates and empanelled providers. Not device manufacturers.
Ancillaries (the MSME ring)	Small diagnostic collection points, home-care agencies and clinic groups — not the hospital chain and not the device factory
Activity (manufacturing vs services)	Services
Geography	Metro delivery, pan-India apps. No factory belt. Do not site this at AMTZ.
Mode	Digital
ICAM status	Phase II
Cluster-shape fit (1–5)	3
Why this fit	Care-delivery MSMEs exist, but they are a service layer. Device manufacturing is a different, higher-scoring row.
HS-4 / services note	No HSN — services. Do not reuse medtech HS 90 or the USD 4.02 billion device export.
FY2024–25 export	n.p. Do not double-count medtech USD 4.02 billion.
Exporting units	n.a.
Gross turnover	n.p.
Domestic vs export turnover	Treat as domestic. The payer is a hospital, an insurer or a public scheme.
Employees	n.p.
Vintage of the wave	2020 (telemedicine guidelines and the digital-health stack).
Large, above ₹500 crore (count)	40
Export-ready, Large	n.a. as exporters
Medium, ₹200–500 crore (count)	60
Export-ready, Medium ₹200–500	n.a. as exporters
Medium, ₹100–200 crore (count)	150
Export-ready, Medium ₹100–200	n.a. as exporters
Small, ₹10–100 crore (count)	1500
Micro, at or below ₹10 crore (count)	3250
MFI on Micro	Thin. A micro collection centre may use MUDRA. The funded healthtech company does not.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: healthcare NBFCs and hospital-equipment finance exist and usually serve the chain, not the collection point. No centre should originate them.
Specific insurance coverage	Clinical and professional covers sit with the provider. Scheme and insurer payouts to a small centre are uninsured receivables. This is not product-liability cover for a device.
Venture capital and private equity	Deep on healthtech platforms. Thin on the collection point.

Field	Value
Band method	Universe: a reconstructed ~5,000 care-delivery and healthtech firms. Device manufacturers are excluded. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 1%; Medium ₹200–500 1%; Medium ₹100–200 3%; Small 30%; Micro 65%. Share of units, not share of turnover.

IT services & GCCs · Phase II · fit 3

Field	Value
Id	it
Industry	IT services & GCCs
Funded or newly gated wave	State GCC and IT policies through the 2010s and the post-2018 scale-up of global capability centres. Phase II. This is a member industry, not a factory cluster.
Participants	NASSCOM member lists and state IT-park tenant lists. GCC announcements are a third count. None is an MSME census, and they are not added.
What was counted	Association and tenant lists. Not a firm census of an MSME ring.
Ancillaries (the MSME ring)	Facilities, staffing and small vendor firms around a campus. They are a weak ring. The GCC itself is the anchor and often the right member, not the cohort.
Activity (manufacturing vs services)	Services
Geography	Bengaluru, Hyderabad, Pune, NCR, Chennai. Virtual delivery. Chapter 18.
Mode	Digital
ICAM status	Phase II
Cluster-shape fit (1–5)	3
Why this fit	Large, digital, and already a Phase II relationship. No factory cash-cycle cohort.
HS-4 / services note	No HSN — services
FY2024–25 export	n.p. as a GCC-only line. India's services exports were USD 383.51 billion in FY2024–25 (PIB). IT is a large part of that account and is not restated here as a cohort figure.
Exporting units	n.p. No TradeStat file for services.
Gross turnover	n.p. in this register. Industry association toplines are not an MSME-ring turnover.
Domestic vs export turnover	Services exports dominate the GCC. The vendor ring, if any, is domestic. No split is calculated.
Employees	n.p. here. Association employment headlines are the sector, not a vendor ring.
Vintage of the wave	The GCC scale-up from about 2018 is the wave inside a much older IT industry. Phase II, not a new discovery.
Large, above ₹500 crore (count)	200
Export-ready, Large	n.p. — services
Medium, ₹200–500 crore (count)	150
Export-ready, Medium ₹200–500	n.p.
Medium, ₹100–200 crore (count)	300
Export-ready, Medium ₹100–200	n.p.
Small, ₹10–100 crore (count)	4000
Micro, at or below ₹10 crore (count)	10350
MFI on Micro	None typical.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: none for a GCC. The GCC is a buyer and a member.
Specific insurance coverage	Professional indemnity is standard at the GCC and rare at a tiny vendor. Vendor receivables are uninsured.
Venture capital and private equity	Deep public markets and private equity on IT and GCC sponsors. None on the facilities vendor.

Field	Value
Band method	Universe: a reconstructed ~15,000 campus vendors and small tech firms. This shape is weak and is labelled reconstructed. It is not NASSCOM membership. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 1%; Medium ₹200–500 1%; Medium ₹100–200 2%; Small 27%; Micro 69%. Share of units, not share of turnover.

Defence manufacturing (private) · Demo · fit 5

Field	Value
Id	defence
Industry	Defence manufacturing (private)
Funded or newly gated wave	iDEX, April 2018 · positive indigenisation lists (five lists, more than 5,500 items) · licensing simplification · defence corridors in Uttar Pradesh and Tamil Nadu. Demonstration cluster: do not relaunch.
Participants	About 16,000 MSMEs is an ecosystem description. Separately, 788 industrial licences to 462 companies. iDEX, February 2025: 619 startups and MSMEs and 430 contracts. These three populations are not added.
What was counted	Ecosystem MSME description, licence-holders, and iDEX participants — three units
Ancillaries (the MSME ring)	Machining, fabrication and subsystem MSMEs that hold a DPSU or private-prime purchase order — not the 16 DPSUs and not an iDEX slide with no order
Activity (manufacturing vs services)	Manufacturing
Geography	Bengaluru, Hyderabad, Pune, and the Tamil Nadu and Uttar Pradesh corridors. Vendor density inside each is not published as one map.
Mode	Hybrid
ICAM status	Demo
Cluster-shape fit (1–5)	5
Why this fit	A thick described MSME vendor base in a few cities, with DPSU offtake. The demo already exists, so the form is an attachment.
HS-4 / services note	No single heading. Chapter 93 understates the trade because subsystems and dual-use parts dominate. The operational definition is the export authorisation, not a customs heading.
FY2024–25 export	₹23,622 crore in FY2024–25 (PIB, about USD 2.76 billion). Private sector ₹15,233 crore; DPSUs ₹8,389 crore.
Exporting units	1,762 export authorisations in FY2024–25, against 1,507 the year before. Authorisations are not exporters. The primary PIB says the exporter count grew 17.4% and does not state the headcount.
Gross turnover	Official defence production ₹1,50,590 crore in FY2024–25 (PIB, 9 August 2025). A later speech says ₹1.54 lakh crore; this register uses ₹1,50,590 crore. DPSUs and other PSUs about 77%; private sector 23%. Production is not MSME turnover.
Domestic vs export turnover	Exports ₹23,622 crore are 15.7% of production ₹1,50,590 crore. That is a production-to-export ratio for the whole industry, including DPSUs, not an MSME turnover split. Domestic share of that ratio is the residual 84%.
Employees	n.p. for the vendor tier.
Vintage of the wave	2018 (iDEX). Licensing liberalisation and the positive lists are the same late-2010s wave. The vendor population is older.
Large, above ₹500 crore (count)	80
Export-ready, Large	Exporter headcount n.p. Authorisations in FY25 were 1,762, which is not this cell
Medium, ₹200–500 crore (count)	120
Export-ready, Medium ₹200–500	n.p. — authorisations are not a turnover band
Medium, ₹100–200 crore (count)	300
Export-ready, Medium ₹100–200	n.p.
Small, ₹10–100 crore (count)	3500
Micro, at or below ₹10 crore (count)	12000
MFI on Micro	None typical. A DPSU vendor's buyer is a public enterprise. MFI, SHG and NABARD rural products do not match the contract.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: iDEX grants up to ₹1.5 crore; ADITI and TDF are grants, not working capital. ₹449.62 crore was allocated to iDEX including ADITI for 2025–26. Bank finance against a defence contract where the bank will lend.

Field	Value
Specific insurance coverage	ECGC for the exporter of record. Contractual transit and product covers. Milestone receivables are uninsured. No MSME-wide defence cover verified.
Venture capital and private equity	Selective on startups with a contract. The iDEX grant is not venture capital. The machine shop on a DPSU order is a bank file.
Band method	Universe: the descriptive ~16,000 MSMEs, reconstructed into bands. It is not a licence census. The 462 licensed companies are a different population and sit conceptually in the upper bands without being forced to equal 462. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 0%; Medium ₹200–500 1%; Medium ₹100–200 2%; Small 22%; Micro 75%. Share of units, not share of turnover.

Food processing (PLI wave) · Demo · fit 5

Field	Value
Id	food
Industry	Food processing (PLI wave)
Funded or newly gated wave	PLI food processing, approved 31 March 2021, outlay ₹10,900 crore · PMFME, outlay ₹10,000 crore · PM Kisan SAMPADA. Demonstration cluster: attach, do not open a second park.
Participants	PLI food: 70 MSMEs directly enrolled and 40 contract manufacturers, inside a beneficiary sales figure that is mostly large firms. PMFME, 31 December 2025: 1,72,707 micro enterprises approved and 59,202 formalised. ASI 2022–23: 42,801 registered food-processing factories. These populations are not added.
What was counted	PLI beneficiaries, PMFME micro units, and ASI factories — three units
Ancillaries (the MSME ring)	Micro units and FPOs supplying a processor, plus small packers in the demo belt — not the PLI champion and not the mega food park operator
Activity (manufacturing vs services)	Manufacturing
Geography	The demo belt, not all 726 ODOP districts. Registered factories in ASI 2022–23 concentrate in Andhra Pradesh (12.68%), Tamil Nadu (11.67%), Telangana (8.65%), Punjab (8.08%) and Maharashtra (6.59%). The attachment uses the belt the demo already chose.
Mode	Traditional
ICAM status	Demo
Cluster-shape fit (1–5)	5
Why this fit	The deepest micro tail in the register, with retail and quick-commerce offtake, and a demo already standing. The centre attaches.
HS-4 / services note	Not one heading. NIC division 10. DGCIS cereal preparations were USD 3.1 billion in FY2024–25 and are only one slice. Do not use them as processed-food exports.
FY2024–25 export	n.p. as a single FY2024–25 processed-food level in the MoFPI table consulted, which ends at USD 10,881.81 million of processed-food exports in FY2023–24. The FY25 share of processed food in agri-exports was stated at 20.4% without a level this register will back-calculate.
Exporting units	n.p. APEDA exporter registers are product-specific and are not the PMFME list.
Gross turnover	GVA, which is not turnover, ₹2.24 lakh crore in 2023–24 (MoFPI; the annual-report table is at constant 2011–12 prices). PLI beneficiary sales ₹3,80,350 crore are scheme sales of approved firms, not micro turnover. PMFME evaluation: average beneficiary turnover about 1.7 times, with no baseline level.
Domestic vs export turnover	n.p. for FY25. FY24 processed-food exports USD 10.88 billion sit inside agri-food exports of USD 46.44 billion in the MoFPI table. No FY25 percentage is computed.
Employees	ASI FY2024–25 food factories: 23.61 lakh persons. ASI 2022–23 registered food processing was 22.96 lakh persons engaged. ASUSE 2022–23: 46.57 lakh workers in unincorporated food processing. Do not add the surveys. PMFME evaluation: more than 2.8 lakh opportunities, a scheme-impact estimate.
Vintage of the wave	2020 PMFME; PLI approved 31 March 2021. The units are older than the schemes. This is a formalisation and incentive wave.
Large, above ₹500 crore (count)	30
Export-ready, Large	Domestic retail and some export houses — exporter count n.p.
Medium, ₹200–500 crore (count)	50
Export-ready, Medium ₹200–500	n.p.
Medium, ₹100–200 crore (count)	120
Export-ready, Medium ₹100–200	n.p.
Small, ₹10–100 crore (count)	1500
Micro, at or below ₹10 crore (count)	4300
MFI on Micro	

Field	Value
	Active. PMFME is a credit-linked subsidy through banks. Seed capital reached 3,76,326 SHG members (₹1,282.99 crore) as on 31 December 2025. NABARD and the state rural livelihood missions are in the same districts. NBFC-MFIs are a parallel micro channel, not the scheme administrator.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: PMFME credit-linked subsidy. As on 30 June 2025, 1,44,517 loans sanctioned, amount ₹11,501.79 crore. PLI food is the large-firm incentive (investment reported ₹9,032 crore; sales ₹3,80,350 crore; employment 3,40,116 direct and indirect). Do not mix the two into one loan.
Specific insurance coverage	Product liability and stock once the unit leaves the kitchen. PMFBY covers the farmer, not the processor. Cold-chain and fire covers are commercial. Retail and quick-commerce receivables are uninsured. No PMFME-specific cover was identified.
Venture capital and private equity	Moderate to deep on packaged-food brands and PLI companies. None on the micro unit. Brand deals are not access for the approved PMFME list.
Band method	Universe: a reconstructed demo-belt cohort of about 6,000 units, not the national 1.73 lakh PMFME approvals and not the 42,801 ASI factories. National figures stay in the participant field. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 0%; Medium ₹200–500 1%; Medium ₹100–200 2%; Small 25%; Micro 72%. Share of units, not share of turnover.

White goods (AC, LED) & furniture · Demo · fit 5

Field	Value
Id	appliances
Industry	White goods (AC, LED) & furniture
Funded or newly gated wave	PLI White Goods, 2021, 84 companies, stated intended investment ₹10,478 crore. Demonstration cluster, with a Noida–Hapur annex. Furniture is the MSME twin in the same geography, not a second PLI.
Participants	84 PLI White Goods companies. The Noida–Hapur annex is described at about 4,500 MSMEs. Those are the cohort. The 84 are not added to the 4,500.
What was counted	Annex MSMEs. PLI companies are a separate anchor list.
Ancillaries (the MSME ring)	Sheet-metal, plastic, fan, LED-module and furniture job-workers selling to a brand — not the PLI principal
Activity (manufacturing vs services)	Manufacturing
Geography	Noida–Hapur annex, about 4,500 MSMEs. Other white-goods plants sit in the south and west and are not this annex.
Mode	Traditional
ICAM status	Demo
Cluster-shape fit (1–5)	5
Why this fit	A counted MSME annex, brand goods-receipt offtake, and an existing attachment point. Not a new park.
HS-4 / services note	8415, 9403, 8539 and related. A single FY25 export line for this annex was not separated from engineering goods.
FY2024–25 export	n.p. for the annex. Engineering goods USD 116.67 billion are too wide. Domestic brand offtake is the buyer.
Exporting units	n.a. as an annex exporter census. Brands export; job-workers mostly do not.
Gross turnover	n.p. for the 4,500. PLI intended investment of ₹10,478 crore is capex of the 84 companies, not annex turnover.
Domestic vs export turnover	Treat the annex as domestic. The buyer is the brand's goods-receipt.
Employees	n.p. for the annex.
Vintage of the wave	2021 (PLI White Goods). The Noida–Hapur furniture and component belt is older; the annex is the delivery form.
Large, above ₹500 crore (count)	25
Export-ready, Large	Domestic brand offtake — n.a. as exporters
Medium, ₹200–500 crore (count)	40
Export-ready, Medium ₹200–500	n.a. as exporters
Medium, ₹100–200 crore (count)	120
Export-ready, Medium ₹100–200	n.a. as exporters
Small, ₹10–100 crore (count)	1400
Micro, at or below ₹10 crore (count)	2915
MFI on Micro	Thin. MUDRA reaches a micro furniture unit. A job-worker on a brand schedule needs a bank line. No sector MFI.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: PLI White Goods is the 84 companies' incentive. TReDS if the brand onboards the job-worker. No annex-specific loan.
Specific insurance coverage	Fire and marine commercial. Brand GRN receivables are uninsured. Product liability sits with the brand. ECGC is the brand's cover when the brand exports.
Venture capital and private equity	Moderate on a few branded appliance companies. None on the furniture and sheet-metal MSME.
Band method	Universe: the Noida–Hapur annex of about 4,500 MSMEs. The 84 PLI companies are not this pyramid. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore

Field	Value
	(investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 0%; Medium ₹200–500 1%; Medium ₹100–200 3%; Small 31%; Micro 65%. Share of units, not share of turnover.

Drones & drone components · Demo · fit 3

Field	Value
Id	drones
Industry	Drones & drone components
Funded or newly gated wave	Drone Rules, 2021 · PLI for drones and components, notified 30 September 2021, outlay ₹120 crore, performance years through FY2023–24 · import restriction on complete drones. Demonstration cluster: do not relaunch.
Participants	PLI second provisional list, 6 July 2022: 12 drone makers and 11 component makers. PIB, 26 July 2024: 48 companies making type-certified models; 70 models; 116 remote-pilot training organisations. A later parliamentary reply: 96 type certificates and 10,208 registered type-certified drones as of September 2024. Aircraft, models, companies and training firms are not added.
What was counted	Manufacturers of type-certified models, with PLI beneficiaries as a subset
Ancillaries (the MSME ring)	The 11 component firms on the 2022 list and later airframe, composite and electronics suppliers. Training organisations are not the manufacturing cohort.
Activity (manufacturing vs services)	Manufacturing
Geography	The 2022 list was already split across Bengaluru, Chennai, Noida, Gurugram, Mumbai, Pune, Hyderabad, Roorkee and Belagavi. No single belt.
Mode	Hybrid
ICAM status	Demo
Cluster-shape fit (1–5)	3
Why this fit	A real licensing wave and a small-firm list, too scattered and too small for a new centre. The demo, if it continues, is an attachment.
HS-4 / services note	8806 for unmanned aircraft. Components are not in 8806.
FY2024–25 export	n.p. The last official sales figure found is the PLI list's own turnover, not an export line.
Exporting units	n.p.
Gross turnover	Combined sales of the 23 PLI-list firms: ₹88 crore in FY2020–21 and ₹319 crore unaudited in FY2021–22. No FY2024–25 industry turnover. Do not substitute a private market-size estimate.
Domestic vs export turnover	n.p. The FY2021–22 figure is total sales of 23 firms, with no export split.
Employees	n.p. Remote-pilot certificates are pilots, not factory jobs.
Vintage of the wave	2021 (Drone Rules and the PLI). The PLI window has closed.
Large, above ₹500 crore (count)	2
Export-ready, Large	n.p.
Medium, ₹200–500 crore (count)	4
Export-ready, Medium ₹200–500	n.p.
Medium, ₹100–200 crore (count)	10
Export-ready, Medium ₹100–200	n.p.
Small, ₹10–100 crore (count)	80
Micro, at or below ₹10 crore (count)	304
MFI on Micro	None typical for manufacturing. Namo Drone Didi uses SHGs for agricultural drone services, which is not this manufacturing row.
Specific lending programmes	Horizontal, for an eligible MSME: CGTMSE (a guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Sector: PLI disbursement of about ₹98.32 crore was reported to Parliament. It is a closed incentive, not a loan. No cluster lending scheme.

Field	Value
Specific insurance coverage	DGCA third-party liability sits on the operator. Hull and product liability for the manufacturer are commercial. No penetration figure.
Venture capital and private equity	Narrow and real at the top: a few manufacturers raised venture capital and ideaForge is listed. The component MSME on the 2022 list is not in that market.
Band method	Universe: a reconstructed ~400 manufacturers and component workshops, including uncertified shops in Micro. The 23 PLI firms are the upper end. FY2021–22 sales of ₹319 crore across 23 firms are the only official size evidence and are not a band. Reconstructed gross-turnover counts, not a GSTN or MCA census. Aligned to Gazette S.O. 1364(E), 21 March 2025, in force 1 April 2025: Micro ≤ ₹10 crore (investment ceiling ≤ ₹2.5 crore), Small ₹10–100 crore (investment ≤ ₹25 crore), Medium ₹100–200 crore and ₹200–500 crore (investment ≤ ₹125 crore), Large > ₹500 crore (outside MSME). The old ₹50–200 slice is remapped: ₹50–100 sits in Small and ₹100–200 in Medium. Udyam turnover excludes exports (S.O. 2119(E) as amended), so a heavy exporter can sit in a lower Udyam class than these gross bands. Unit share is not turnover share. Export-ready counts are not a TradeStat exporter census.
Unit share of the reconstructed pyramid	Large 0%; Medium ₹200–500 1%; Medium ₹100–200 3%; Small 20%; Micro 76%. Share of units, not share of turnover.

1.7 Data references

Official numbers below stay official. Reconstructed band counts and export-ready counts stay inside the row that labels them. A source is added when a row uses a series. None of the official series below is dropped to shorten the page.

- 1. Canvas A, new-industry-cluster-map.canvas.tsx. This is the industry register for this brief: participants, geography, activity, turnover shape, export mix and the finance stack.
- 2. Canvas B, charter-intervention-rank.canvas.tsx. Tool scores, delivery, additionality, the action line, and the per-industry justify and sources fields.
- 3. MSME Catalyst charter brochure, 17 October 2026. A Capability Centre does not lend, underwrite, adjudicate, allocate leads, or operate an ODR platform.
- 4. ICAM v4, Chapter 8 (the Capability Centre) and Chapter 18 (digital members and partners). Closed demo list: defence, drones, appliances (white goods and furniture), food. Closed Phase II list: electronics, ev, solar, it, healthtech, edtech, logistics, fintech. Technical textiles are the new textile wave. The older textiles and apparel demonstration is not a 31st row.
- 5. TradeStat and DGCIS. Merchandise values. TradeStat publishes values, not exporter counts. FY2024–25 merchandise exports: USD 437.42 billion.
- 6. PIB, FY2024–25 services exports: USD 383.51 billion. Services sit in the services account. They have no HSN.
- 7. PIB and DGCIS, FY2024–25 goods: electronics USD 38.58 billion; engineering USD 116.67 billion; pharma USD 30.47 billion.
- 8. EPCMD and DGCIS: medical devices exports USD 4.02 billion in FY2024–25. Healthtech must not be added to this figure.
- 9. Pharmexcil: bulk drugs USD 4.87 billion; AYUSH and herbals USD 688.89 million. These are not the medical-device number.
- 10. CLE and IBEF: leather, footwear and goods export ₹48,667 crore; sector turnover about ₹1.62 lakh crore; about 42 lakh employees; about 15,000 footwear units; 2,868 CLE members. Members and units are different counts.
- 11. MeitY and Rajya Sabha: electronics production ₹11.32 lakh crore; export ₹3.26 lakh crore (about 29 percent export and 71 percent domestic); more than 300 mobile units; about 25 lakh jobs. PLI LSEM: 1,30,330 direct jobs to June 2025; 32 LSEM companies. Smartphones of about USD 24.84 billion sit inside HS 8517 as 85171300.
- 12. PIB defence. Production ₹1,50,590 crore (9 August 2025). Export ₹23,622 crore (about 16 percent export and 84 percent domestic). 1,762 export authorisations. Exporter count up 17.4 percent, with no headcount published. About 16,000 MSMEs, and 788 licences to 462 companies, are not the same population. iDEX, February 2025: 619 startups and MSMEs, 430 contracts.
- 13. India Semiconductor Mission: 10 plants, six states, about ₹1.6 lakh crore committed capital expenditure. That figure is capex, not turnover.
- 14. CII and IBEF medical devices: about 700 manufacturers, about 90 percent described as MSME, market ₹1.02 lakh crore in FY2023–24. About 4,000 CDSCO licensed manufacturing sites are a second population and are not added to the 700.

- 15. ASI FY2024–25 persons engaged in factories: food 23.61 lakh, textiles 17.57 lakh, motor vehicles 14.80 lakh, pharma 10.92 lakh. Do not add ASI to ASUSE or to a scheme-impact estimate.
- 16. DPIIT and PIB: PLI has 806 approvals across 14 sectors.
- 17. MoFPI. PMFME: 1,72,707 approved and 59,202 formalised as on 31 December 2025; seed capital reached 3,76,326 SHG members. PLI food: 70 MSMEs directly and 40 contract manufacturers; scheme sales ₹3,80,350 crore. The two schemes are not one loan book.
- 18. PLI Auto: 82 applicants, 278 units; determined sales ₹32,879 crore and 48,974 jobs to 30 September 2025. FAME-II outlay ₹6,559 crore. PM E-DRIVE ₹10,900 crore from 1 October 2024.
- 19. Drone PLI: 23 firms; combined sales ₹319 crore in FY2021–22 (PIB, 6 July 2022). PIB, 26 July 2024: 48 manufacturing companies with type-certified models. Do not borrow the Namo Drone Didi SHG population into this row.
- 20. PLI White Goods: 84 companies; intended investment ₹10,478 crore. The Noida–Hapur annex of about 4,500 MSMEs is the cohort used for the white-goods row.
- 21. ALMM: 100 manufacturers and 123 units listed at about 100 GW. That is a module list, not a cluster census of installers.
- 22. Toys. HS 9503: USD 169.46 million in FY2024–25. Chapter 95 as a whole: USD 570.95 million. The toy row uses 9503. Chapter 95 is wider.
- 23. National Technical Textiles Mission: technical-textile exports ₹24,732.68 crore in FY2024–25.
- 24. Gazette of India, S.O. 1364(E), 21 March 2025, in force 1 April 2025. Micro at or below ₹10 crore (investment ceiling ₹2.5 crore). Small ₹10–100 crore (investment ceiling ₹25 crore). Medium is split: ₹100–200 crore and ₹200–500 crore (investment ceiling ₹125 crore). Large is above ₹500 crore and is outside MSME. The old ₹50–200 slice is remapped: ₹50–100 sits inside Small and ₹100–200 inside Medium.
- 25. S.O. 2119(E), as amended. Udyam turnover excludes exports, so a heavy exporter can sit in a lower Udyam class than the gross bands used here.
- 26. Horizontal credit instruments, named where a row uses them: CGTMSE (a credit guarantee, not insurance), MUDRA, TReDS, SIDBI, and ECGC where the firm itself exports. Business EMI protection is a need to explore. It is not a product the centre sells.
- 27. Lines that are not used as the industry's own export. HS 8802 is aircraft, not small satellites. HS 8507 is mostly lead-acid batteries, not advanced chemistry cells. HS 2207 is not the ethanol-blending story. Farm-machinery export is not agri-tech turnover.

2. Charter alignment ranking

2.1 The sixteen tools

The brochure of 17 October 2026 organises the work in four pillars. Pillar 1 is enterprise readiness before a file reaches a lender. Pillar 2 is the cash cycle after an invoice exists: payment friction, recovery and repayment continuity. Pillar 3 is capital, schemes, the lender route and market access. Pillar 4 is the intelligence the centre keeps: the map, the drop-off, the scorecard and compliance. The enterprise stage the centre is built for is the MSME that already sells, or is ready to sell, into a named offtake. The Gate-1 delivery test is whether that work can be stood up in year 1 as a new centre or as an attachment, without the centre becoming a lender, an insurer, a court or a lead allocator.

Pillar	Tool	Brochure job
P1	Credit Ki Kaksha	Credit literacy, cash-flow management and documentation for lender assessment.
P1	Rating Ki Kaksha	Financial discipline, governance and rating-improvement clinics.
P1	Digital Dost	Application quality, document completion and follow-through.
P1	Policy & program readiness	Eligibility, documentation and voluntary registration for public programmes.
P2	Cluster-led payment support	Recurring delays, buyer friction and priority cases.
P2	ODR recovery pathway	Case preparation, mediation or conciliation, then the statutory route.
P2	Business EMI protection	Early-stage concept. Score the need to explore it, not a product launch.
P2	Recovery & repayment outcomes	Recovery days, case outcomes, recurring buyer friction and repayment continuity.

Pillar	Tool	Brochure job
P3	Capital pathways	Working capital matched to the cash cycle; readiness for debt, equity, SME IPO or bonds.
P3	Policies & support	Make central, state and sector support usable before an application is filed.
P3	Lender pathways	Enterprise readiness, then the right lender channel and product.
P3	Market access	Buyer linkages and technology access that make revenue and creditworthiness visible.
P4	Cluster mapping	Anchors, buyers, segments, technology gaps, cash cycles and shared constraints.
P4	Readiness & friction research	Where enterprises drop out of market, finance, payment and formalisation.
P4	Scorecards & dashboards	Capability, receivables, access, inclusion and growth outcomes.
P4	Compliance intelligence	Registration and invoice-settlement disclosure, and the bottlenecks a statute does not remove.

2.2 Scoring method

Each tool is scored 1 to 5. A score of 4 or 5 is Activate in year 1. A score of 3 is Later. A score of 1 or 2 is Skip. A High-need industry may still Skip tools. Business EMI protection is scored as the need to explore a cover for the instalment, not as a product to launch.

A pillar score is the mean of its four tools. Overall = P1 × 18% + P2 × 24% + P3 × 18% + P4 × 14% + delivery × 16% + additionality × 10%. Delivery asks whether a year-1 centre, or an attachment to a demo or annex that already exists, can actually be formed. Additionality asks what the centre would add that the scheme, the council or the buyer does not already do.

Overall	Tier	Reading
4.00 and above	High	Year-1 intervene, or attach. Rank still does not decide the five.
3.00 to below 4.00	Medium	Next wave or Phase II. Not a year-1 centre.
2.00 to below 3.00	Watch	Absorb, map only, or wait for offtake.
Below 2.00	Out of charter	Not a cohort.

After the arithmetic, four types are forced Out of charter: fintech, edtech, cybersecurity and green hydrogen. Their tool scores are still printed, so a reader can see the arithmetic that was overridden.

2.3 Ranked list

Need is the overall score, to three decimals. Activate is the count of tools scored 4 or 5. ICAM status is repeated so a High demonstration is not misread as a new centre.

Rank	Industry	Need	Tier	ICAM	P1	P2	P3	P4	Activate	Action
1	Medical devices	4.835	High	New candidate	5.00	4.75	5.00	4.25	15	Year-1 Capability Centre — first new cluster
2	Footwear (non-leather + sports)	4.745	High	New candidate	4.75	4.75	4.75	4.25	16	Year-1 Capability Centre
3	ACC pack, BMS & recycling	4.360	High	New candidate	4.00	4.75	4.25	4.25	15	Year-1 Capability Centre
4	Food processing (PLI wave)	4.350	High	Demo	4.50	4.50	4.25	4.25	16	Year-1 attach pillars to the food demo
5	White goods & furniture	4.165	High	Demo	4.00	4.50	3.75	3.50	12	Year-1 attach pillars to the appliances annex
6	E-commerce logistics & warehousing	4.110	High	Phase II	3.50	4.50	3.75	3.75	12	High-need reserve — not year-1 unless a sixth slot
7	Toys (modern + GI/artisan)	4.075	High	New candidate	4.50	3.75	3.50	4.25	11	High-need reserve — not year-1 unless a sixth slot
8	Nutraceuticals & AYUSH manufacturing	3.930	Medium	New candidate	4.50	3.75	4.00	4.00	14	Next mapping / Phase II wave
9	Mobile & electronics manufacturing	3.920	Medium	Phase II	4.00	4.00	3.75	3.75	11	Next mapping / Phase II wave
10	Technical textiles & MMF	3.745	Medium	New candidate	3.75	3.50	3.50	4.00	10	Next mapping / Phase II wave

19	Healthtech & care delivery	3.085	Medium	Phase II	3.50	3.25	3.00	3.25	4	Next mapping / Phase II wave
20	Drones & drone components	3.050	Medium	Demo	3.25	2.25	2.75	3.50	5	Attach pillars to the existing demo
21	Bulk drugs & KSMs / APIs	2.550	Watch	New candidate	3.00	2.25	2.75	3.25	2	Watch — mapping and friction only
22	Specialty steel (MSME conversion)	2.550	Watch	New candidate	3.00	2.25	2.75	3.25	2	Watch — mapping and friction only
23	Space components & small-sat	2.435	Watch	New candidate	2.75	2.00	2.50	3.50	2	Watch — mapping and friction only
24	Geospatial & drones-as-a-service	2.355	Watch	New candidate	2.75	2.00	2.25	3.25	2	Watch — mapping and friction only
25	Semiconductors & OSAT ancillaries	2.345	Watch	New candidate	2.75	2.00	2.00	3.50	2	Watch — mapping and friction only
26	AVGC-XR	2.335	Watch	New candidate	2.50	2.25	2.25	3.00	2	Watch — mapping and friction only
27	IT services & GCCs	2.275	Watch	Phase II	2.75	2.00	2.00	3.00	2	Watch — mapping and friction only
28	Cybersecurity services	2.200	Out of charter	New candidate	2.50	2.25	2.25	2.75	0	Out of cluster charter — member / partner
29	Education technology & skilling	2.195	Out of charter	Phase II	2.75	2.00	2.50	2.50	0	Out of cluster charter — delivery partner
30	Fintech & BC-agent networks	1.700	Out of charter	Phase II	2.25	1.50	2.00	2.25	0	Out of cluster charter — member / partner
31	Green hydrogen ancillaries	1.690	Out of charter	New candidate	2.00	1.50	2.00	2.50	0	Out of cluster charter — anchor, not cohort

2.4 What changes once the tools are scored

- Medical devices leads, at 4.835. Every tool is 4 or 5. Business EMI protection is 4 and is an explore, not a product.
- Footwear is second, at 4.745. The Focus Product Scheme file and the lender route weigh as much as the ODR pathway. A recovery cell without a sanction path leaves the scheme unused.
- Pack, BMS and recycling is 4.360. Food processing is 4.350. They sit together just above 4.3. Food takes the attachment because the food demonstration already exists. Pack and BMS is the new centre because additionality is 5: nobody is running that MSME ring.
- White goods and furniture is fifth, at 4.165, and attaches to the Noida–Hapur annex of about 4,500 MSMEs. It is above the two reserves.
- Logistics (4.110) and toys (4.075) stay High. They are reserves, not year-1 centres, unless a sixth slot is funded.
- Nutraceuticals (3.930) and electronics components (3.920) sit just below High. They are the top of the next wave.
- E-waste is Medium. Mapping, Digital Dost and CPCB compliance intelligence Activate. ODR and Business EMI protection Skip until the unit is formal enough to hold a receivable.
- Semiconductor ancillaries are Watch. Only cluster mapping and friction research Activate, and only until a fab offtake exists. The plants themselves are not the cohort.
- Fintech, edtech, cybersecurity and green hydrogen are Out of charter by rule. Green hydrogen's arithmetic is also below 2. The other three are excluded even where a pillar would have left them on Watch.

2.5 Tool heat — High-need types

Scores are 1 to 5. The table is split so a page can hold it. High-need here means the tier, including the two reserves.

Pillars 1 and 2

Industry	Credit	Rating	Digital	Policy	Payment	ODR	EMI	Outcomes
Medical devices	5	5	5	5	5	5	4	5
Footwear (non-leather + sports)	5	4	5	5	5	5	4	5
ACC pack, BMS & recycling	4	4	4	4	5	5	4	5
Food processing (PLI wave)	5	4	4	5	5	4	4	5
White goods & furniture	4	5	4	3	5	5	4	4
E-commerce logistics & warehousing	4	3	4	3	5	4	4	5
Toys (modern + GI/artisan)	5	3	5	5	4	4	3	4

2.6 Playbook — every High-need type

One sub-section per High-need type, in rank order. Why these scores is the justify field. Corroborating sources is the sources field. Neither is a restatement of the problem line.

1. Medical devices · 4.835 · High

Field	Value
ICAM status	New candidate
Cluster-shape fit (not the charter score)	5 — Thick MSME manufacturer tail, park belts, and hospital or PSU offtake a centre can sit beside without becoming the park.
Activity and geography	Manufacturing. AMTZ Visakhapatnam spoke; Greater Noida and the Kanchipuram licensed-site belt; other parks in Madhya Pradesh and Tamil Nadu. State split of the 4,000 sites is not published.
Delivery (1–5)	5
Additionality (1–5)	5
Pillars	P1 5.00; P2 4.75; P3 5.00; P4 4.25
Measurable problem	Hospital, PSU and OEM payables run long, and most of the ~700 manufacturers fail CDSCO, BIS and lender files.
Tool-level intervention	Year 1, at one park spoke: Credit Kaksha, Rating Kaksha, Digital Dost and programme files on CDSCO/BIS/lender packs; a payment cell and ODR case-prep on hospital and PSU invoices; capital and lender route after the file exists; GeM and hospital-chain linkage; map the 4,000 sites against the 700 manufacturers; compliance intel on CDSCO. EMI is explored, not sold.
Outside the charter	Do not finance park buildings, run the PLI plant, or become a notified body.
Recommended action	Year-1 Capability Centre — first new cluster

Activate: Credit Ki Kaksha, Rating Ki Kaksha, Digital Dost, Policy & program readiness, Cluster-led payment support, ODR recovery pathway, Business EMI protection, Recovery & repayment outcomes, Capital pathways, Policies & support, Lender pathways, Market access, Cluster mapping, Readiness & friction research, Compliance intelligence. Later: Scorecards & dashboards. Skip: None.

Why these scores. P1 5.00 — credit 5 Activate, rating 5 Activate, digital 5 Activate, policy 5 Activate. CII's MSME share plus CDSCO and BIS gates make every readiness tool a year-1 file, not a poster. P2 4.75 — payment 5 Activate, odr 5 Activate, emi 4 Activate, outcomes 5 Activate. Hospital, PSU and OEM payables are the brochure receivables case. EMI is 4 because formal bank EMIs already sit on those invoices; it is a concept to explore, not a product. P3 5.00 — capital 5 Activate, schemes 5 Activate, lender 5 Activate, market 5 Activate. Park allotment, PLI and GeM pathways exist and are hard to use. ECGC covers HS 90 exporters. The MSME ring does not see device-company private equity. P4 4.25 — map 5 Activate, friction 4 Activate, scorecard 3 Later, compliance 5 Activate. About 4,000 licensed sites versus about 700 manufacturers is an unmapped registry. Compliance intel leads. The scorecard stays Later until the spoke cohort is opted in. Delivery 5 — Parks already exist at Vizag, Greater Noida and Kanchipuram, so a desk can attach in year 1. Additionality 5 — Parks and PLI do not run Kaksha or ODR. That is the gap.

Corroborating sources. CII/IBEF: ~700 manufacturers, ~90% MSME, market ₹1.02 lakh crore FY24. Department of Pharmaceuticals / DGCIS: medtech exports USD 4.02 billion FY25; CDSCO licensed manufacturers about 4,108 and no central production census. PLI MedTech: 28 applicants, outlay ₹3,420 crore. Brochure, 17 October 2026.

2. Footwear (non-leather + sports) · 4.745 · High

Field	Value
ICAM status	New candidate
Cluster-shape fit (not the charter score)	5 — A thick small-factory tail in two tight belts, with brand and export-house offtake.
Activity and geography	Manufacturing. Ambur–Ranipet in Tamil Nadu, and Agra. Other CLE belts exist; year-1 is one of these two.
Delivery (1–5)	5
Additionality (1–5)	5
Pillars	P1 4.75; P2 4.75; P3 4.75; P4 4.25
Measurable problem	Brand and export-house goods-receipt delays, and credit-linked footwear files that die at bank sanction.
Tool-level intervention	Year-1 centre in Ambur–Ranipet or Agra: programme files and Digital Dost so the footwear scheme reaches sanction; Credit Kaksha and Rating Kaksha; payment cell and ODR on brand invoices; lender route after the file; ECGC where the unit exports.
Outside the charter	Do not build a footwear park or route units to a preferred lender.
Recommended action	Year-1 Capability Centre

Activate: Credit Ki Kaksha, Rating Ki Kaksha, Digital Dost, Policy & program readiness, Cluster-led payment support, ODR recovery pathway, Business EMI protection, Recovery & repayment outcomes, Capital pathways, Policies & support, Lender pathways, Market access, Cluster mapping, Readiness & friction research, Scorecards & dashboards, Compliance intelligence. Later: None. Skip: None.

Why these scores. P1 4.75 — credit 5 Activate, rating 4 Activate, digital 5 Activate, policy 5 Activate. The sanction file is the failure mode, so Credit Kaksha, Digital Dost and programme files are 5. Rating Kaksha is 4 because units that already bill a brand have books worth a clinic. P2 4.75 — payment 5 Activate, odr 5 Activate, emi 4 Activate, outcomes 5 Activate. Brand and export-house GRN delays are formal enough for a payment cell and ODR. EMI is 4: explore it where a bank EMI already sits on those invoices. P3 4.75 — capital 5 Activate, schemes 5 Activate, lender 5 Activate, market 4 Activate. Scheme usability and the lender route are as important as ODR, because the credit-linked scheme dies at sanction. Market access is 4, not 5: CLE already convenes buyers. P4 4.25 — map 4 Activate, friction 5 Activate, scorecard 4 Activate, compliance 4 Activate. Friction research on the sanction wall is Activate. The belt is known, so mapping is 4 rather than a blank-sheet 5. Delivery 5 — Ambur–Ranipet and Agra are existing factory belts a desk can enter in year 1. Additionality 5 — CLE and IFLADP do not run ODR or a sanction clinic.

Corroborating sources. CLE/IBEF: about 15,000 footwear units, 2,868 CLE members, sector turnover about ₹1.62 lakh crore, exports ₹48,667 crore, about 42 lakh workers, FY25 basket. BIS footwear quality orders from 2020–21. Brochure, 17 October 2026.

3. ACC pack, BMS & recycling · 4.360 · High

Field	Value
ICAM status	New candidate
Cluster-shape fit (not the charter score)	5 — The cell plant is an anchor. Pack, BMS and recycling MSMEs are a thick enough ring, with OEM goods-receipt offtake, to form a centre.
Activity and geography	Manufacturing. Wherever the awarded cell plants sit, plus existing pack shops in the Pune, NCR and southern auto-electronics belts. The ring is not the plant campus.
Delivery (1–5)	4
Additionality (1–5)	5
Pillars	P1 4.00; P2 4.75; P3 4.25; P4 4.25
Measurable problem	OEM goods-receipt cycles strand working capital in the pack and BMS shop, and the ring around the cell plants is unmapped.
Tool-level intervention	New centre on the MSME ring only: map pack, BMS and authorised recyclers; payment cell and ODR on OEM GRNs; working capital matched to the cell-to-pack cycle; Credit Kaksha once the buyer is named.
Outside the charter	Do not run a PLI-ACC plant or treat the four beneficiaries as the cohort.
Recommended action	Year-1 Capability Centre

Activate: Credit Ki Kaksha, Rating Ki Kaksha, Digital Dost, Policy & program readiness, Cluster-led payment support, ODR recovery pathway, Business EMI protection, Recovery & repayment outcomes, Capital pathways, Policies & support, Lender pathways, Market access, Cluster mapping, Readiness & friction research, Scorecards & dashboards. Later: Compliance intelligence. Skip: None.

Why these scores. P1 4.00 — credit 4 Activate, rating 4 Activate, digital 4 Activate, policy 4 Activate. The ring is formal enough for all four readiness tools at 4, once a buyer code exists. It is not a nano cohort. P2 4.75 — payment 5 Activate, odr 5 Activate, emi 4 Activate, outcomes 5 Activate. OEM GRN delay is the cash cycle. Payment cell, ODR and outcome tracking Activate. EMI is 4 because those shops already service bank EMIs against the same receipts. P3 4.25 — capital 5 Activate, schemes 4 Activate, lender 4 Activate, market 4 Activate. Working capital mismatched to cell-to-pack inventory is the capital pathway. PLI-ACC is the anchor's scheme, so scheme usability is 4, not a claim that Catalyst runs PLI. P4 4.25 — map 5 Activate, friction 5 Activate, scorecard 4 Activate, compliance 3 Later. Mapping the ring, and the friction of who never gets a vendor code, are 5. Compliance on waste and transport rules is Later relative to the cash cycle. Delivery 4 — The OEM belts are real. The centre itself is new, so delivery is 4 not 5. Additionality 5 — Nobody runs Kaksha or ODR on pack MSMEs. The PLI programme runs the plants.

Corroborating sources. PLI-ACC awards, 2021, a small set of gigafactory beneficiaries. HS 8507 is the wrong export line (mostly lead-acid). Brochure, 17 October 2026. Motor-vehicle ASI employment is 14.80 lakh and is not this ring.

4. Food processing (PLI wave) · 4.350 · High

Field	Value
ICAM status	Demo
Cluster-shape fit (not the charter score)	5 — The deepest micro tail in the register, with retail and quick-commerce offtake, and a demo already standing. The centre attaches.
Activity and geography	Manufacturing. The demo belt, not all 726 ODOP districts. Registered factories in ASI 2022–23 concentrate in Andhra Pradesh (12.68%), Tamil Nadu (11.67%), Telangana (8.65%), Punjab (8.08%) and Maharashtra (6.59%). The attachment uses the belt the demo already chose.
Delivery (1–5)	5
Additionality (1–5)	3
Pillars	P1 4.50; P2 4.50; P3 4.25; P4 4.25
Measurable problem	Retail and quick-commerce payments, and PMFME or FPO files that stall, inside a demo that already exists.
Tool-level intervention	Attach to the food demo: Credit Kaksha for the FPO and micro unit, programme files so PMFME reaches formalisation, a payment cell on retail and quick-commerce invoices, and a scheme desk. Do not open a second park.
Outside the charter	Do not run PLI food, build a mega food park, or replace the state nodal agency.
Recommended action	Year-1 attach pillars to the food demo

Activate: Credit Ki Kaksha, Rating Ki Kaksha, Digital Dost, Policy & program readiness, Cluster-led payment support, ODR recovery pathway, Business EMI protection, Recovery & repayment outcomes, Capital pathways, Policies & support, Lender pathways, Market access, Cluster mapping, Readiness & friction research, Scorecards & dashboards, Compliance intelligence. Later: None. Skip: None.

Why these scores. P1 4.50 — credit 5 Activate, rating 4 Activate, digital 4 Activate, policy 5 Activate. Credit Kaksha and programme files are 5 because the scheme is credit-linked and the approval-to-formalisation gap is measured. Rating Kaksha is 4 for units that have left the kitchen and now face a buyer. Digital Dost is 4. P2 4.50 — payment 5 Activate, odr 4 Activate, emi 4 Activate, outcomes 5 Activate. Retail and quick-commerce invoices are the formal receivable, so the payment cell, ODR, EMI-explore and outcome tracking Activate. This is a different cash cycle from a kirana-only micro unit, and the demo has to select units that have those invoices. P3 4.25 — capital 4 Activate, schemes 5 Activate, lender 4 Activate, market 4 Activate. Scheme usability is 5. Capital, lender and buyer links are 4. PLI food is not the micro unit's scheme, and the centre must say so. P4 4.25 — map 4 Activate, friction 5 Activate, scorecard 4 Activate, compliance 4 Activate. Friction research is 5 because 1,72,707 approved and 59,202 formalised are the drop-off. Mapping, the scorecard and FSSAI compliance are 4. Delivery 5 — The demo exists. Delivery is 5 as an attachment. Additionality 3 — The state nodal agency already runs PMFME. Catalyst adds the retail payment cell and the file standard, not a second helpdesk. Additionality is 3. Food still takes the attach slot because the demo is standing, while pack and BMS is the new centre.

Corroborating sources. MoFPI: PLI food outlay ₹10,900 crore; 70 MSMEs directly and 40 contract manufacturers; scheme sales ₹3,80,350 crore. PMFME: 1,72,707 approved and 59,202 formalised as on 31 December 2025; 3,76,326 SHG members. ASI FY25 food factories 23.61 lakh persons. PMFME evaluation, 31 March 2025: more than 2.8 lakh opportunities and about 1.7 times turnover. Brochure, 17 October 2026.

5. White goods & furniture · 4.165 · High

Field	Value
ICAM status	Demo
Cluster-shape fit (not the charter score)	5 — A counted MSME annex, brand goods-receipt offtake, and an existing attachment point. Not a new park.
Activity and geography	Manufacturing. Noida–Hapur annex, about 4,500 MSMEs. Other white-goods plants sit in the south and west and are not this annex.
Delivery (1–5)	5
Additionality (1–5)	4
Pillars	P1 4.00; P2 4.50; P3 3.75; P4 3.50
Measurable problem	Brand goods-receipt delays, and BIS energy-rating or quality files, inside an annex of about 4,500 MSMEs.
Tool-level intervention	Year-1 attachment to the Noida–Hapur annex: Rating Kaksha on BIS, a payment cell and ODR on brand GRNs, Credit Kaksha, and the lender route after the file. Do not relaunch the demo.
Outside the charter	Do not administer PLI White Goods or build another industrial estate.
Recommended action	Year-1 attach pillars to the appliances annex

Activate: Credit Ki Kaksha, Rating Ki Kaksha, Digital Dost, Cluster-led payment support, ODR recovery pathway, Business EMI protection, Recovery & repayment outcomes, Capital pathways, Policies & support, Lender pathways, Cluster mapping, Readiness & friction research. Later: Policy & program readiness, Market access, Scorecards & dashboards, Compliance intelligence. Skip: None.

Why these scores. P1 4.00 — credit 4 Activate, rating 5 Activate, digital 4 Activate, policy 3 Later. Rating Kaksha is 5 because BIS and energy-rating files are the discipline a brand asks for. Credit Kaksha and Digital Dost are 4. Programme files are Later: PLI is the wrong window and should not be staffed as if it were theirs. P2 4.50 — payment 5 Activate, odr 5 Activate, emi 4 Activate, outcomes 4 Activate. Brand GRN delay is the same receivables logic as food. Payment cell, ODR and EMI-explore Activate. Outcome tracking is 4. P3 3.75 — capital 4 Activate, schemes 4 Activate, lender 4 Activate, market 3 Later. Working capital, scheme clarity, and the bank route are 4. Market access is Later: the annex already has a buyer panel. P4 3.50 — map 4 Activate, friction 4 Activate, scorecard 3 Later, compliance 3 Later. Mapping and friction on who in the 4,500 actually invoices the brand are 4. Scorecard and a new compliance stack are Later; BIS sits in Rating Kaksha. Delivery 5 — The annex exists. Delivery is 5. Additionality 4 — The annex and PLI do not run ODR or a rating clinic. Additionality is 4.

Corroborating sources. PLI White Goods: 84 companies, intended investment ₹10,478 crore. Noida–Hapur annex about 4,500 MSMEs, the cohort used for this row. Brochure, 17 October 2026.

6. E-commerce logistics & warehousing · 4.110 · High

Field	Value
ICAM status	Phase II
Cluster-shape fit (not the charter score)	4 — Thick micro fleet tail and named warehouse belts, with platform payment as the offtake. Already the shape of an annex, not a new discovery.
Activity and geography	Services. Bhiwandi, Bilaspur–Gurugram, Hoskote and Sriperumbudur warehouse belts. Last-mile riders are city-wide.
Delivery (1–5)	5
Additionality (1–5)	4
Pillars	P1 3.50; P2 4.50; P3 3.75; P4 3.75
Measurable problem	Platform and 3PL payouts land after the vehicle EMI is due, for a micro fleet that already has a formal loan.
Tool-level intervention	Reserve, not year 1: attach a payment cell to the Bhiwandi annex if a sixth slot is funded. Credit Kaksha on the EMI-versus-payout gap. Do not build a warehouse.
Outside the charter	Do not become a 3PL, a fleet lessor, or a new Phase II discovery.
Recommended action	High-need reserve — not year-1 unless a sixth slot

Activate: Credit Ki Kaksha, Digital Dost, Cluster-led payment support, ODR recovery pathway, Business EMI protection, Recovery & repayment outcomes, Capital pathways, Lender pathways, Market access, Cluster mapping, Readiness & friction research, Scorecards & dashboards. Later: Rating Ki Kaksha, Policy & program readiness, Policies & support, Compliance intelligence. Skip: None.

Why these scores. P1 3.50 — credit 4 Activate, rating 3 Later, digital 4 Activate, policy 3 Later. Credit Kaksha and Digital Dost Activate because the fleet owner’s loan file and e-way compliance fail together. Rating and programme files are Later. P2 4.50 — payment 5 Activate, odr 4 Activate, emi 4 Activate, outcomes 5 Activate. Platform payout versus a live vehicle EMI is the EMI-concept case, so payment, ODR, EMI explore and outcome tracking all Activate. P3 3.75 — capital 4 Activate, schemes 3 Later, lender 4 Activate, market 4 Activate. Working capital matched to the payout cycle, the vehicle-NBFC route, and a platform as the named buyer are 4. There is no sector scheme whose usability is the main job. P4 3.75 — map 4 Activate, friction 4 Activate, scorecard 4 Activate, compliance 3 Later. The belt can carry a scorecard in year 1 if the annex opens, so mapping, friction and the scorecard are 4. Compliance on e-way is Later relative to the cash cycle. Delivery 5 — A Bhiwandi-type annex is the delivery form already. Delivery is 5. Additionality 4 — Platforms do not run a fleet-owner recovery cell. Additionality is 4. It is still a reserve because the year-1 five are fuller factory cohorts.

Corroborating sources. E-way bill and warehouse geography (Bhiwandi and peer belts). No HSN. Vehicle NBFC and MUDRA use on micro fleets is the lending channel. Brochure, 17 October 2026.

7. Toys (modern + GI/artisan) · 4.075 · High

Field	Value
ICAM status	New candidate
Cluster-shape fit (not the charter score)	5 — A thick micro tail, named belts, and a QCO that already knocked small units out of the market.
Activity and geography	Manufacturing. About 50 clusters cited by DPIIT. Koppal hub; NCR and Greater Noida toy park; Channapatna; Maharashtra units. A centre is a hub plus spokes, not one park.
Delivery (1–5)	4
Additionality (1–5)	5
Pillars	P1 4.50; P2 3.75; P3 3.50; P4 4.25
Measurable problem	BIS files stop small units selling, and brand or marketplace payments are slow where an invoice exists.
Tool-level intervention	If a sixth slot is funded: Digital Dost and programme files for BIS, compliance intel, Credit Kaksha on the micro tail, and a payment cell only for formal brand invoices. Do not open another toy park.
Outside the charter	Do not relaunch SFURTI as a new park or staff a tool room the ministry already funds.
Recommended action	High-need reserve — not year-1 unless a sixth slot

Activate: Credit Ki Kaksha, Digital Dost, Policy & program readiness, Cluster-led payment support, ODR recovery pathway, Recovery & repayment outcomes, Policies & support, Market access, Cluster mapping, Readiness & friction research, Compliance intelligence. Later: Rating Ki Kaksha, Business EMI protection, Capital pathways, Lender pathways, Scorecards & dashboards. Skip: None.

Why these scores. P1 4.50 — credit 5 Activate, rating 3 Later, digital 5 Activate, policy 5 Activate. The QCO is a documented file failure, so Credit Kaksha, Digital Dost and programme files Activate. Rating Kaksha is Later: many units are still informal. P2 3.75 — payment 4 Activate, odr 4 Activate, emi 3 Later, outcomes 4 Activate. Brand and marketplace delays are real where the invoice is formal, so the payment cell and ODR Activate. EMI is Later: bank EMIs are not yet the typical stress on an artisan spoke. P3 3.50 — capital 3 Later, schemes 4 Activate, lender 3 Later, market 4 Activate. Scheme usability is the BIS and SFURTI file, not a missing PLI. Lender route is Later until the file exists. Buyer linkage to organised retail is Activate. P4 4.25 — map 4 Activate, friction 5 Activate, scorecard 3 Later, compliance 5 Activate. Friction research on who the QCO shut, and compliance intel, are the lead. The scorecard waits for an opted-in Koppal-plus-spoke cohort. Delivery 4 — Koppal plus SFURTI spokes can host a hub-and-spoke desk. It is not already built. Additionality 5 — Nineteen SFURTI clusters do not run Kaksha or a payment cell. A second park would add nothing.

Corroborating sources. DGCIS: HS 9503 USD 169.46 million and chapter 95 USD 570.95 million, FY25. DPIIT: QCO from 1 January 2021, 21,000+ Udyam MSMEs, 1,800+ BIS licences, 19 SFURTI clusters. Brochure, 17 October 2026.

2.7 Medium, Watch and Out of charter

This is the evidence trail for types that are not year-1 High. It is not a second ranking. The summary repeats rank, need and action so a reader can find the row, and the narrative under each name is the reason.

Rank	Industry	Need	Tier	ICAM	Action
8	Nutraceuticals & AYUSH manufacturing	3.930	Medium	New candidate	Next mapping / Phase II wave
9	Mobile & electronics manufacturing	3.920	Medium	Phase II	Next mapping / Phase II wave
10	Technical textiles & MMF	3.745	Medium	New candidate	Next mapping / Phase II wave
11	Defence manufacturing (private)	3.610	Medium	Demo	Attach pillars to the existing demo
12	EV charging infrastructure	3.545	Medium	New candidate	Next mapping / Phase II wave
13	E-waste & circular electronics	3.455	Medium	New candidate	Next mapping / Phase II wave
14	Solar PV modules & BOS	3.275	Medium	Phase II	Next mapping / Phase II wave
15	Ethanol, biofuels & SAF feedstock	3.220	Medium	New candidate	Next mapping / Phase II wave
16	Agri-tech & farm machinery digital	3.175	Medium	New candidate	Next mapping / Phase II wave
17	EV vehicles & auto-tech components	3.155	Medium	Phase II	Next mapping / Phase II wave
18	Data-centre ancillaries	3.140	Medium	New candidate	Next mapping / Phase II wave
19	Healthtech & care delivery	3.085	Medium	Phase II	Next mapping / Phase II wave
20	Drones & drone components	3.050	Medium	Demo	Attach pillars to the existing demo

Rank	Industry	Need	Tier	ICAM	Action
21	Bulk drugs & KSMs / APIs	2.550	Watch	New candidate	Watch — mapping and friction only
22	Specialty steel (MSME conversion)	2.550	Watch	New candidate	Watch — mapping and friction only
23	Space components & small-sat	2.435	Watch	New candidate	Watch — mapping and friction only
24	Geospatial & drones-as-a-service	2.355	Watch	New candidate	Watch — mapping and friction only
25	Semiconductors & OSAT ancillaries	2.345	Watch	New candidate	Watch — mapping and friction only
26	AVGC-XR	2.335	Watch	New candidate	Watch — mapping and friction only
27	IT services & GCCs	2.275	Watch	Phase II	Watch — mapping and friction only
28	Cybersecurity services	2.200	Out of charter	New candidate	Out of cluster charter — member / partner
29	Education technology & skilling	2.195	Out of charter	Phase II	Out of cluster charter — delivery partner
30	Fintech & BC-agent networks	1.700	Out of charter	Phase II	Out of cluster charter — member / partner
31	Green hydrogen ancillaries	1.690	Out of charter	New candidate	Out of cluster charter — anchor, not cohort

8. Nutraceuticals & AYUSH manufacturing · 3.930 · Medium

Field	Value
ICAM status	New candidate
Cluster-shape fit (not the charter score)	4 — Licensed manufacturers with a domestic brand and export buyer, in known belts, but the two regulators mean the list is split.
Activity and geography	Manufacturing. Himachal (Baddi and surrounds), Uttarakhand, Gujarat and Maharashtra health-product belts. Not one park.
Delivery (1–5)	4
Additionality (1–5)	3
Pillars	P1 4.50; P2 3.75; P3 4.00; P4 4.00
Measurable problem	FSSAI and AYUSH files fail, and brand or export-house payments follow only after the licence is current.
Tool-level intervention	Next wave, not the year-1 five: Digital Dost and compliance intel on the two licences, then a payment cell on brand invoices in one belt (Baddi or Gujarat).
Outside the charter	Do not double-count medical-device exports or open a second pharma cluster.
Recommended action	Next mapping / Phase II wave

Activate: Credit Ki Kaksha, Rating Ki Kaksha, Digital Dost, Policy & program readiness, Cluster-led payment support, ODR recovery pathway, Recovery & repayment outcomes, Capital pathways, Policies & support, Lender pathways, Market access, Cluster mapping, Readiness & friction research, Compliance intelligence. Later: Business EMI protection, Scorecards & dashboards. Skip: None.

Why these scores. P1 4.50 — credit 4 Activate, rating 4 Activate, digital 5 Activate, policy 5 Activate. Digital Dost and programme files are 5 because applications die on FSSAI and AYUSH completeness. Credit and rating clinics are 4 for licensed units that already have books. P2 3.75 — payment 4 Activate, odr 4 Activate, emi 3 Later, outcomes 4 Activate. Brand invoices are formal enough for a payment cell, ODR and outcome tracking. EMI is Later until those EMIs are shown to sit on the same invoices. P3 4.00 — capital 4 Activate, schemes 4 Activate, lender 4 Activate, market 4 Activate. Scheme, lender and buyer tools are all usable once the licence is current. Private equity is on the brand, so the MSME packer still needs the bank route. P4 4.00 — map 4 Activate, friction 4 Activate, scorecard 3 Later, compliance 5 Activate. Compliance intel is the lead. Mapping is 4 because the belts are known but the two licence lists are not joined. The scorecard is Later. Delivery 4 — Baddi, Uttarakhand or a Gujarat belt can hold a desk. Delivery is 4. Additionality 3 — Regulators and Pharmexcil already exist. Additionality is 3: the centre only wins if it completes files they do not complete.

Corroborating sources. Pharmexcil, 14 June 2025: AYUSH and herbals USD 688.89 million. Drugs and pharmaceuticals exports USD 30.47 billion are a different basket. ASI FY25 pharma factories 10.92 lakh persons, parent industry only. Brochure, 17 October 2026.

9. Mobile & electronics manufacturing · 3.920 · Medium

Field	Value
ICAM status	Phase II
Cluster-shape fit (not the charter score)	4 — Phase II assembly is already known. The uncounted supplier ring in two or three belts is the only centre question, and it is not yet listed.
Activity and geography	Manufacturing. Noida–Greater Noida, Sriperumbudur–Oragadam, Sri City. The ring, if dense, is in those catchments.
Delivery (1–5)	4
Additionality (1–5)	4
Pillars	P1 4.00; P2 4.00; P3 3.75; P4 3.75
Measurable problem	Assembler payment terms hit the uncounted tool room, and firms are sent toward a PLI they cannot enter.
Tool-level intervention	Next mapping wave: count non-PLI suppliers in Noida or Sriperumbudur, then a payment cell and programme files that keep them out of the wrong scheme.
Outside the charter	Do not treat ₹5.45 lakh crore of mobile production as the cohort, and do not relaunch Phase II assembly as a new discovery.
Recommended action	Next mapping / Phase II wave

Activate: Credit Ki Kaksha, Digital Dost, Policy & program readiness, Cluster-led payment support, ODR recovery pathway, Recovery & repayment outcomes, Capital pathways, Lender pathways, Market access, Cluster mapping, Readiness & friction research. Later: Rating Ki Kaksha, Business EMI protection, Policies & support, Scorecards & dashboards, Compliance intelligence. Skip: None.

Why these scores. P1 4.00 — credit 4 Activate, rating 3 Later, digital 4 Activate, policy 5 Activate. Programme files are 5 so a moulder is not coached into PLI LSEM. Credit Kaksha and Digital Dost are 4. Rating is Later until the ring is listed. P2 4.00 — payment 5 Activate, odr 4 Activate, emi 3 Later, outcomes 4 Activate. Assembler payment terms are the cash cycle, so the payment cell, ODR and outcome tracking Activate. EMI is Later. P3 3.75 — capital 4 Activate, schemes 3 Later, lender 4 Activate, market 4 Activate. Working capital, the bank or TReDS route, and a vendor-code link are 4. Scheme usability is Later because the live PLI is the anchor's. P4 3.75 — map 5 Activate, friction 4 Activate, scorecard 3 Later, compliance 3 Later. Mapping is 5. The drop-off from vendor-code lists is friction research at 4. Scorecard and compliance wait. Delivery 4 — The belts are real and Phase II infrastructure exists. A supplier desk would be new. Delivery is 4. Additionality 4 — MeitY and the assemblers already run the principal. They do not run receivables for the tool room. Additionality is 4, not 5, because the phase is already open.

Corroborating sources. MeitY / PIB, 23 July 2025: production ₹11.32 lakh crore, exports about ₹3.26 lakh crore, mobile production ₹5.45 lakh crore, mobile exports about ₹2 lakh crore, 300+ units, about 25 lakh jobs, PLI LSEM 1,30,330 direct jobs to June 2025, 32 beneficiaries. DGCIS electronic goods USD 38.58 billion FY25. Brochure, 17 October 2026.

10. Technical textiles & MMF · 3.745 · Medium

Field	Value
ICAM status	New candidate
Cluster-shape fit (not the charter score)	4 — Real buyer industries and a converter tail inside old textile towns, but the technical-textile firm is not yet separated from the commodity mill.
Activity and geography	Manufacturing. Surat, Panipat, Coimbatore and other MMF centres. GREAT startups are scattered, including Bengaluru. No official district census of technical-textile units.
Delivery (1–5)	4
Additionality (1–5)	4
Pillars	P1 3.75; P2 3.50; P3 3.50; P4 4.00
Measurable problem	Converters fail buyer specifications and QCOs, and wait on auto, medical and defence invoices, while the firm list is still mixed up with commodity mills.
Tool-level intervention	Next wave: map who actually makes technical textiles in one town, then Credit Kaksha, Rating Kaksha, a payment cell and compliance intel on the QCO. Do not send a powerloom into PLI.
Outside the charter	Do not run an R&D project the textile research associations already own, or relaunch the apparel demo.
Recommended action	Next mapping / Phase II wave

Activate: Credit Ki Kaksha, Rating Ki Kaksha, Policy & program readiness, Cluster-led payment support, ODR recovery pathway, Capital pathways, Market access, Cluster mapping, Readiness & friction research, Compliance intelligence. Later: Digital Dost, Business EMI protection, Recovery & repayment outcomes, Policies & support, Lender pathways, Scorecards & dashboards. Skip: None.

Why these scores. P1 3.75 — credit 4 Activate, rating 4 Activate, digital 3 Later, policy 4 Activate. Credit and rating clinics fit a mill that already has books. Programme files Activate so units are not pointed at PLI or GREAT by mistake. Digital Dost is Later. P2 3.50 — payment 4 Activate, odr 4 Activate, emi 3 Later, outcomes 3 Later. Buyer invoices in auto and medical supply are formal enough for a payment cell and ODR. EMI and outcome tracking are Later until the cohort is separated from commodity trade. P3 3.50 — capital 4 Activate, schemes 3 Later, lender 3 Later, market 4 Activate. Working capital and a buyer link Activate. The live schemes are the wrong window for a small converter, so scheme usability is Later. P4 4.00 — map 5 Activate, friction 4 Activate, scorecard 3 Later, compliance 4 Activate. Mapping is 5 because the export number does not name the firms. QCO compliance intel is Activate. The scorecard waits. Delivery 4 — Surat, Panipat or Coimbatore can host a desk once the cohort is cut. Delivery is 4. Additionality 4 — NTTM and the research associations own R&D and testing. They do not own the receivable.

Corroborating sources. Ministry of Textiles: NTTM 2020, ₹1,480 crore; technical-textile exports ₹24,732.68 crore in FY25; 24 GREAT startups; 8 QCOs on 68 items. PLI Textiles, 24 September 2021, ₹10,683 crore, 30 companies commenced production. ASI FY25 textile factories 17.57 lakh persons. Brochure, 17 October 2026.

11. Defence manufacturing (private) · 3.610 · Medium

Field	Value
ICAM status	Demo
Cluster-shape fit (not the charter score)	5 — A thick described MSME vendor base in a few cities, with DPSU offtake. The demo already exists, so the form is an attachment.
Activity and geography	Manufacturing. Bengaluru, Hyderabad, Pune, and the Tamil Nadu and Uttar Pradesh corridors. Vendor density inside each is not published as one map.
Delivery (1–5)	5
Additionality (1–5)	3
Pillars	P1 3.50; P2 3.25; P3 3.00; P4 4.00
Measurable problem	DPSU milestone bills stick, and three different population numbers are briefed as if they were one cluster.
Tool-level intervention	Attach to the existing demo, and only if a DPSU or prime opens its vendor list: Credit Kaksha, programme files, a payment cell and compliance intel on export authorisation. Do not relaunch the demo.
Outside the charter	Do not bid a contract, grant an iDEX award, or treat 16,000 and 462 as the same count.
Recommended action	Attach pillars to the existing demo

Activate: Credit Ki Kaksha, Policy & program readiness, Cluster-led payment support, Recovery & repayment outcomes, Cluster mapping, Readiness & friction research, Compliance intelligence. Later: Rating Ki Kaksha, Digital Dost, ODR recovery pathway, Capital pathways, Policies & support, Lender pathways, Market access, Scorecards & dashboards. Skip: Business EMI protection.

Why these scores. P1 3.50 — credit 4 Activate, rating 3 Later, digital 3 Later, policy 4 Activate. Credit Kaksha and programme files Activate for a vendor who cannot turn a milestone bill into a bank file. Rating and Digital Dost are Later. P2 3.25 — payment 4 Activate, odr 3 Later, emi 2 Skip, outcomes 4 Activate. The payment cell and outcome tracking Activate because milestone delay is structural. ODR is Later: many vendors sit outside the micro and small ceiling. EMI Skips; the instrument is the milestone, not a retail EMI. P3 3.00 — capital 3 Later, schemes 3 Later, lender 3 Later, market 3 Later. iDEX is a grant, not the scheme-usability job, and SIDM and the DPSU already run empanelment. P3 stays Later. P4 4.00 — map 5 Activate, friction 4 Activate, scorecard 3 Later, compliance 4 Activate. Mapping is 5 because the three population numbers cannot be one brief. Friction and export-authorisation compliance Activate. The scorecard is Later. Delivery 5 — The demo and the corridors exist. Delivery is 5 as an attachment, not as a new park. Additionality 3 — iDEX, SIDM and the corridors already occupy the ground. Catalyst adds the cash-flow file only. Additionality is 3.

Corroborating sources. PIB, 1 April 2025: exports ₹23,622 crore; 1,762 authorisations; exporter count up 17.4% with no headcount. PIB, 9 August 2025: production ₹1,50,590 crore. February 2025 iDEX note: 619 startups and MSMEs, 430 contracts. About 16,000 MSMEs; 788 licences to 462 companies. FY25 domestic contracts: 193 worth ₹2,09,050 crore, of which 177 worth ₹1,68,922 crore were domestic. Brochure, 17 October 2026.

12. EV charging infrastructure · 3.545 · Medium

Field	Value
ICAM status	New candidate
Cluster-shape fit (not the charter score)	4 — Visible DISCOM and fleet offtake, and a real installer tail, but the tail is spread along roads rather than one lane.
Activity and geography	Both. Installation is pan-India along highways and cities. Assembly and panel work concentrates in the NCR, Pune and Gujarat electrical belts.
Delivery (1–5)	3
Additionality (1–5)	4
Pillars	P1 3.75; P2 3.25; P3 4.00; P4 3.50
Measurable problem	Small assemblers and electricians wait on charge-point operators, and the PM E-DRIVE file does not reach them.
Tool-level intervention	Next wave, not year 1: map one assembly belt, Credit Kaksha and programme files for the installer, payment cell on CPO invoices, lender route after the file.
Outside the charter	Do not become a charge-point operator or allocate DISCOM sites.
Recommended action	Next mapping / Phase II wave

Activate: Credit Ki Kaksha, Digital Dost, Policy & program readiness, Cluster-led payment support, Capital pathways, Policies & support, Lender pathways, Market access, Cluster mapping, Readiness & friction research. Later: Rating Ki Kaksha, ODR recovery pathway, Business EMI protection, Recovery & repayment outcomes, Scorecards & dashboards, Compliance intelligence. Skip: None.

Why these scores. P1 3.75 — credit 4 Activate, rating 3 Later, digital 4 Activate, policy 4 Activate. Credit Kaksha, Digital Dost and programme files Activate for the installer who cannot complete a subsidy or vendor file. Rating is Later. P2 3.25 — payment 4 Activate, odr 3 Later, emi 3 Later, outcomes 3 Later. CPO payment delays justify a payment cell. ODR and EMI are Later until invoices are formal and bank EMIs are common. P3 4.00 — capital 4 Activate, schemes 4 Activate, lender 4 Activate, market 4 Activate. All four capital and market tools are 4: the scheme exists, the bank product is ordinary MSME credit, and the CPO is a named buyer. P4 3.50 — map 4 Activate, friction 4 Activate, scorecard 3 Later, compliance 3 Later. The installer ring is unmapped, and the drop-off is the programme file. Scorecard and a heavy compliance tool are Later. Delivery 3 — Pan-India installs mean the centre has to pick one belt first. Delivery is 3. Additionality 4 — The subsidy programme does not run a payment cell for the electrician.

Corroborating sources. PM E-DRIVE guidelines, 30 September 2024, outlay ₹10,900 crore. FAME-II charging allocation ₹912.50 crore; charging described as unlicensed. Brochure, 17 October 2026.

13. E-waste & circular electronics · 3.455 · Medium

Field	Value
ICAM status	New candidate
Cluster-shape fit (not the charter score)	5 — A thick informal micro tail in named lanes, with brand EPR as the offtake, if the centre first gets units authorised.
Activity and geography	Manufacturing. Seelampur (Delhi) and Moradabad, with smaller belts in other cities. Tight enough for a hub-and-spoke once units are formal.
Delivery (1–5)	3
Additionality (1–5)	5
Pillars	P1 3.75; P2 2.25; P3 3.50; P4 4.50
Measurable problem	Units cannot invoice a brand until they hold a CPCB authorisation, so there is no formal receivable to recover.
Tool-level intervention	Map Seelampur and Moradabad. Digital Dost and compliance intel on the CPCB file. Programme files and a buyer link to an authorised channel. Skip ODR and EMI until an invoice exists.
Outside the charter	Do not run an EPR exchange or set up as a recycler.
Recommended action	Next mapping / Phase II wave

Activate: Credit Ki Kaksha, Digital Dost, Policy & program readiness, Policies & support, Market access, Cluster mapping, Readiness & friction research, Compliance intelligence. Later: Cluster-led payment support, Recovery & repayment outcomes, Capital pathways, Lender pathways, Scorecards & dashboards. Skip: Rating Ki Kaksha, ODR recovery pathway, Business EMI protection.

Why these scores. P1 3.75 — credit 4 Activate, rating 2 Skip, digital 5 Activate, policy 4 Activate. Digital Dost and programme files Activate because the authorisation file is the drop-off. Rating Kaksha Skips: books are not there yet. Credit Kaksha is 4 for the micro tail that already uses informal credit. P2 2.25 — payment 3 Later, odr 2 Skip, emi 1 Skip, outcomes 3 Later. Payment support is Later. ODR Skips and EMI Skips until the unit is formal and an invoice exists. P3 3.50 — capital 3 Later, schemes 4 Activate, lender 3 Later, market 4 Activate. Scheme usability is the EPR and authorisation route. Market access is the link to an authorised recycler or brand channel. Capital and lender routes wait on the file. P4 4.50 — map 5 Activate, friction 5 Activate, scorecard 3 Later, compliance 5 Activate. Mapping, friction research and CPCB compliance intel are the year-1 tools if this wave is staffed. The scorecard is Later. Delivery 3 — Formalisation has to come before a centre can hold a cohort. Delivery is 3. Additionality 5 — Nobody else runs a file clinic on the informal lane. Brand EPR portals do not.

Corroborating sources. E-Waste (Management) Rules, 2022. Informal concentration in Seelampur and Moradabad is the cluster geography used by CPCB and state boards; a public unit census was not used. Brochure, 17 October 2026.

14. Solar PV modules & BOS · 3.275 · Medium

Field	Value
ICAM status	Phase II
Cluster-shape fit (not the charter score)	4 — Phase II module plants are anchors. BOS and O&M MSMEs are the ring, thinner than the GW headlines and more geographically spread.
Activity and geography	Manufacturing. Module capacity is concentrated in Gujarat, with large lines also in Tamil Nadu, Telangana and elsewhere. BOS fabrication is wider. Projects in Rajasthan are generation, not manufacturing.
Delivery (1–5)	4
Additionality (1–5)	3
Pillars	P1 3.25; P2 3.00; P3 3.00; P4 3.50
Measurable problem	EPC payment terms hit BOS fabricators, and ALMM compliance is about to tighten for cells, but the fabricator list is not the ALMM list.
Tool-level intervention	Phase II mapping of BOS fabricators in Gujarat. Programme files and compliance intel so a small fabricator is not sent into PLI. A payment cell only where the EPC invoice is formal.
Outside the charter	Do not run a module plant or treat enlisted GW as a cluster.
Recommended action	Next mapping / Phase II wave

Activate: Policy & program readiness, Cluster-led payment support, Cluster mapping, Compliance intelligence. Later: Credit Ki Kaksha, Rating Ki Kaksha, Digital Dost, ODR recovery pathway, Recovery & repayment outcomes, Capital pathways, Policies & support, Lender pathways, Market access, Readiness & friction research, Scorecards & dashboards. Skip: Business EMI protection.

Why these scores. P1 3.25 — credit 3 Later, rating 3 Later, digital 3 Later, policy 4 Activate. Programme files are 4 so the fabricator is not pointed at PLI. The other readiness tools are Later: the micro installer is a different job. P2 3.00 — payment 4 Activate, odr 3 Later, emi 2 Skip, outcomes 3 Later. EPC delays justify a payment cell. ODR is Later. EMI Skips: the stress is inventory and the EPC, not a consumer EMI. P3 3.00 — capital 3 Later, schemes 3 Later, lender 3 Later, market 3 Later. IREDA and PLI are the plant's channels. They are Later for this ring, not Activate. P4 3.50 — map 4 Activate, friction 3 Later, scorecard 3 Later, compliance 4 Activate. Mapping BOS separately from ALMM is Activate. Cell-ALMM compliance intel is Activate for manufacturers who are already mid-size; it is not a micro clinic. The scorecard is Later. Delivery 4 — Gujarat fabrication can host a spoke. Delivery is 4 and the decision is still not year 1. Additionality 3 — MNRE, SECI and IREDA already run the official door. Additionality is 3.

Corroborating sources. MNRE: ALMM from 21 manufacturers in 2021 to 100 manufacturers and 123 units at 100 GW. PLI tranches: 3 and 11 bidders. Installed PLI capacity about 18.5 GW modules as on 30 June 2025, which is capacity. Brochure, 17 October 2026.

15. Ethanol, biofuels & SAF feedstock · 3.220 · Medium

Field	Value
ICAM status	New candidate
Cluster-shape fit (not the charter score)	3 — The plant is an anchor and the OMC is the buyer. The micro tail is real but spread across districts.
Activity and geography	Manufacturing. Uttar Pradesh, Maharashtra, Karnataka and Bihar distillery belts for the plants. Collection is district-wide. A centre would have to pick one feedstock belt.
Delivery (1–5)	3
Additionality (1–5)	3
Pillars	P1 3.50; P2 2.50; P3 4.00; P4 3.50
Measurable problem	FPO and collection units drop out of feedstock supply because the aggregation file and the payment from the plant are weak.
Tool-level intervention	Not year 1. In one belt: Credit Kaksha and NABARD or FPO scheme files, then a buyer link to the distillery. Skip ODR until invoices are formal.
Outside the charter	Do not finance a distillery or run the blending programme.
Recommended action	Next mapping / Phase II wave

Activate: Credit Ki Kaksha, Policy & program readiness, Capital pathways, Policies & support, Lender pathways, Market access, Cluster mapping, Readiness & friction research. Later: Rating Ki Kaksha, Digital Dost, Cluster-led payment support, Recovery & repayment outcomes, Scorecards & dashboards, Compliance intelligence. Skip: ODR recovery pathway, Business EMI protection.

Why these scores. P1 3.50 — credit 4 Activate, rating 3 Later, digital 3 Later, policy 4 Activate. Credit Kaksha and programme files Activate because FPO paperwork is the drop-off. Rating and Digital Dost are Later. P2 2.50 — payment 3 Later, odr 2 Skip, emi 2 Skip, outcomes 3 Later. Payment from the plant is a Later watch. ODR and EMI Skip: many collection relationships are not formal invoices with a bank EMI underneath. P3 4.00 — capital 4 Activate, schemes 4 Activate, lender 4 Activate, market 4 Activate. NABARD, FPO credit and AIF are real products a centre could make usable, and the distillery is a named buyer. All four P3 tools are 4. P4 3.50 — map 4 Activate, friction 4 Activate, scorecard 3 Later, compliance 3 Later. The collection ring is unmapped at belt level. Scorecard and a compliance clinic are Later. Delivery 3 — A belt has to be chosen. National blending is not a site. Delivery is 3. Additionality 3 — OMCs and NABARD already have schemes. A centre would only add file completion, and only in one belt.

Corroborating sources. National Policy on Biofuels, 2018, and the ethanol blending programme. HS 2207 is not the offtake. NABARD and AIF are the micro channels. Brochure, 17 October 2026.

16. Agri-tech & farm machinery digital · 3.175 · Medium

Field	Value
ICAM status	New candidate
Cluster-shape fit (not the charter score)	3 — Fabricators sit in real belts, but the digital cohort is pan-India and farm-machinery exports are the wrong turnover.
Activity and geography	Both. Punjab, western Uttar Pradesh, Maharashtra and Karnataka machinery belts, plus a pan-India startup layer that is not a belt.
Delivery (1–5)	3
Additionality (1–5)	3
Pillars	P1 3.75; P2 2.50; P3 3.50; P4 3.50
Measurable problem	Custom-hiring and small fabricators fall out of state mechanisation files, and startup turnover is mistaken for machinery exports.
Tool-level intervention	Not year 1. In one machinery belt: programme files and Credit Kaksha for custom-hiring units, and a buyer link to the state scheme. Skip ODR.
Outside the charter	Do not quote HS 8432 exports as agri-tech revenue or fund a tractor OEM.
Recommended action	Next mapping / Phase II wave

Activate: Credit Ki Kaksha, Digital Dost, Policy & program readiness, Policies & support, Market access, Cluster mapping, Readiness & friction research. Later: Rating Ki Kaksha, Cluster-led payment support, Recovery & repayment outcomes, Capital pathways, Lender pathways, Scorecards & dashboards, Compliance intelligence. Skip: ODR recovery pathway, Business EMI protection.

Why these scores. P1 3.75 — credit 4 Activate, rating 3 Later, digital 4 Activate, policy 4 Activate. Credit Kaksha, Digital Dost and programme files Activate for the custom-hiring file. Rating is Later. P2 2.50 — payment 3 Later, odr 2 Skip, emi 2 Skip, outcomes 3 Later. Payment friction is Later. ODR and EMI Skip because many hires are not formal enough, and bank EMIs are not the documented stress. P3 3.50 — capital 3 Later, schemes 4 Activate, lender 3 Later, market 4 Activate. Scheme usability and a state or FPO buyer link are 4. The lender route waits on the file. Venture capital is on the startup, not the fabricator. P4 3.50 — map 4 Activate, friction 4 Activate, scorecard 3 Later, compliance 3 Later. Mapping has to separate certificates from factories before any scorecard. Friction research on scheme drop-off is Activate. Delivery 3 — A belt can be chosen, but the digital layer is not a place. Delivery is 3. Additionality 3 — State mechanisation missions and NABARD already fund the asset. The file clinic is the only add.

Corroborating sources. AgriSURE is equity or blended capital, not an MFI loan. Farm-machinery headings 8432 and 8433 are excluded from this cohort’s export. Brochure, 17 October 2026.

17. EV vehicles & auto-tech components · 3.155 · Medium

Field	Value
ICAM status	Phase II
Cluster-shape fit (not the charter score)	3 — The vehicle OEM is the anchor. The component belt is real, but the pack row is the better new centre and this row should not be opened beside it.
Activity and geography	Manufacturing. Pune–Chakan–Talegaon, Hosur–Krishnagiri, Sriperumbudur, Manesar–Bawal, Sanand, Pithampur. Phase II belts, not a new discovery.
Delivery (1–5)	4
Additionality (1–5)	2
Pillars	P1 3.00; P2 3.25; P3 3.00; P4 3.25
Measurable problem	OEM payment terms are real, and they are already the reason to open the pack centre rather than a second auto desk.
Tool-level intervention	Do not staff a year-1 vehicle centre. If a Pune supplier desk opens later, it should be the pack and component ring, not the OEM.
Outside the charter	Do not relaunch Phase II EV as a new cluster or run PLI Auto.
Recommended action	Next mapping / Phase II wave

Activate: Cluster-led payment support, Cluster mapping. Later: Credit Ki Kaksha, Rating Ki Kaksha, Digital Dost, Policy & program readiness, ODR recovery pathway, Business EMI protection, Recovery & repayment outcomes, Capital pathways, Policies & support, Lender pathways, Market access, Readiness & friction research, Scorecards & dashboards, Compliance intelligence. Skip: None.

Why these scores. P1 3.00 — credit 3 Later, rating 3 Later, digital 3 Later, policy 3 Later. Readiness tools are Later. The OEM and Tier-1 already have vendor development. P2 3.25 — payment 4 Activate, odr 3 Later, emi 3 Later, outcomes 3 Later. The payment cell is 4 because OEM cycles are real, and it should be run on the pack row rather than duplicated here. ODR, EMI and outcomes stay Later. P3 3.00 — capital 3 Later, schemes 3 Later, lender 3 Later, market 3 Later. PLI and the demand incentive are the anchor's schemes. All four P3 tools stay Later so this row does not compete with the pack centre. P4 3.25 — map 4 Activate, friction 3 Later, scorecard 3 Later, compliance 3 Later. A map that points suppliers to the pack cohort, rather than a new scorecard, is the only Activate. Delivery 4 — The belts exist, so a desk could open. It should not, while the pack centre is the year-1 vehicle. Delivery stays 4 as a property of the belt, not as a decision to open. Additionality 2 — Prefer the pack and BMS sibling. Additionality of a second auto centre is 2.

Corroborating sources. PLI Auto: 82 applicants and 278 units as on 30 November 2025; determined sales ₹32,879 crore and 48,974 jobs to 30 September 2025; outlay ₹25,938 crore. FAME-II reimbursements ₹6,559 crore. PM E-DRIVE ₹10,900 crore from 1 October 2024. ASI FY25 motor vehicles 14.80 lakh persons. Brochure, 17 October 2026.

18. Data-centre ancillaries · 3.140 · Medium

Field	Value
ICAM status	New candidate
Cluster-shape fit (not the charter score)	3 — Offtake is visible, but the anchor is the campus operator and the MSME ring is not a tight factory belt.
Activity and geography	Both. Navi Mumbai, Chennai, Hyderabad, Noida and Bengaluru campus clusters. Vendors are wider than the campus fence.
Delivery (1–5)	3
Additionality (1–5)	3
Pillars	P1 3.00; P2 3.25; P3 3.25; P4 3.25
Measurable problem	Operator retention and milestone payments, once a vendor invoice exists, with no map of who the vendors are.
Tool-level intervention	Later wave: map vendors around one campus cluster and open a payment cell only where invoices are formal. Do not staff a centre in year 1.
Outside the charter	Do not develop a data-centre park or raise infrastructure capital.
Recommended action	Next mapping / Phase II wave

Activate: Cluster-led payment support, Capital pathways, Cluster mapping. Later: Credit Ki Kaksha, Rating Ki Kaksha, Digital Dost, Policy & program readiness, ODR recovery pathway, Business EMI protection, Recovery & repayment outcomes, Policies & support, Lender pathways, Market access, Readiness & friction research, Scorecards & dashboards, Compliance intelligence. Skip: None.

Why these scores. P1 3.00 — credit 3 Later, rating 3 Later, digital 3 Later, policy 3 Later. Readiness tools are Later. The ring is not yet listed, so a classroom has no roll. P2 3.25 — payment 4 Activate, odr 3 Later, emi 3 Later, outcomes 3 Later. The payment cell is Activate where a formal vendor invoice is stuck in operator retention. ODR and EMI are Later until that invoice is the norm. P3 3.25 — capital 4 Activate, schemes 3 Later, lender 3 Later, market 3 Later. Working capital against retention is the capital need. There is no sector scheme to make usable. P4 3.25 — map 4 Activate, friction 3 Later, scorecard 3 Later, compliance 3 Later. Mapping is the only strong research tool. A scorecard before the map would invent a cohort. Delivery 3 — A spoke beside one campus is possible after the map. It is not year-1. Additionality 3 — Operators already qualify their vendors. Cash-flow work would be new, but only after the list exists.

Corroborating sources. State data-centre policies from 2020 onward. No official vendor census. Campus capex is not sales. Brochure, 17 October 2026.

19. Healthtech & care delivery · 3.085 · Medium

Field	Value
ICAM status	Phase II
Cluster-shape fit (not the charter score)	3 — Care-delivery MSMEs exist, but they are a service layer. Device manufacturing is a different, higher-scoring row.
Activity and geography	Services. Metro delivery, pan-India apps. No factory belt. Do not site this at AMTZ.
Delivery (1–5)	3
Additionality (1–5)	2
Pillars	P1 3.50; P2 3.25; P3 3.00; P4 3.25
Measurable problem	Insurer and public-scheme payouts to small care units are slow, and this row is easily confused with medical devices.
Tool-level intervention	Do not open a second health centre. If a device centre sees care-unit invoices, record them as out of cohort. Mapping only, to keep the rows apart.
Outside the charter	Do not double-count device exports, finance a hospital, or relaunch Phase II healthtech as new.
Recommended action	Next mapping / Phase II wave

Activate: Credit Ki Kaksha, Digital Dost, Cluster-led payment support, Cluster mapping. Later: Rating Ki Kaksha, Policy & program readiness, ODR recovery pathway, Business EMI protection, Recovery & repayment outcomes, Capital pathways, Policies & support, Lender pathways, Market access, Readiness & friction research, Scorecards & dashboards, Compliance intelligence. Skip: None.

Why these scores. P1 3.50 — credit 4 Activate, rating 3 Later, digital 4 Activate, policy 3 Later. Credit Kaksha and Digital Dost are 4 for a small diagnostic unit’s lender file. Rating and programme files are Later. P2 3.25 — payment 4 Activate, odr 3 Later, emi 3 Later, outcomes 3 Later. The payment cell is 4 because insurer and scheme payouts recur. ODR and EMI are Later: many claims are not invoices in the MSME Act sense. P3 3.00 — capital 3 Later, schemes 3 Later, lender 3 Later, market 3 Later. Healthcare NBFCs are the chain’s product. The centre should not staff a lender route here while the device row is the year-1 health cohort. P4 3.25 — map 4 Activate, friction 3 Later, scorecard 3 Later, compliance 3 Later. Mapping Activate, only to prevent a merge with medical devices. Other research tools are Later. Delivery 3 — No belt that is not a hospital chain. Delivery is 3. Additionality 2 — Phase II health programmes and the hospital chains already exist. Additionality is 2.

Corroborating sources. Telemedicine practice guidelines, 2020. Medtech exports USD 4.02 billion are a different row and are not used. Brochure, 17 October 2026.

20. Drones & drone components · 3.050 · Medium

Field	Value
ICAM status	Demo
Cluster-shape fit (not the charter score)	3 — A real licensing wave and a small-firm list, too scattered and too small for a new centre. The demo, if it continues, is an attachment.
Activity and geography	Manufacturing. The 2022 list was already split across Bengaluru, Chennai, Noida, Gurugram, Mumbai, Pune, Hyderabad, Roorkee and Belagavi. No single belt.
Delivery (1–5)	4
Additionality (1–5)	3
Pillars	P1 3.25; P2 2.25; P3 2.75; P4 3.50
Measurable problem	DGCA type-certification files, not a receivable book large enough to staff.
Tool-level intervention	Attach file help to the existing demo if it is still live: Digital Dost, programme files and compliance intel. Do not open a new centre. Do not borrow Namo Drone Didi's SHG population.
Outside the charter	Do not relaunch the drone demonstration as a new discovery or run a training organisation.
Recommended action	Attach pillars to the existing demo

Activate: Digital Dost, Policy & program readiness, Cluster mapping, Readiness & friction research, Compliance intelligence. Later: Credit Ki Kaksha, Cluster-led payment support, Capital pathways, Policies & support, Market access. Skip: Rating Ki Kaksha, ODR recovery pathway, Business EMI protection, Recovery & repayment outcomes, Lender pathways, Scorecards & dashboards.

Why these scores. P1 3.25 — credit 3 Later, rating 2 Skip, digital 4 Activate, policy 4 Activate. Digital Dost and programme files Activate because the type certificate is the drop-off. Credit Kaksha is Later. Rating Skips: the firms are young and few. P2 2.25 — payment 3 Later, odr 2 Skip, emi 2 Skip, outcomes 2 Skip. There are not enough formal buyer invoices to staff ODR, EMI or a recovery score. The payment cell is Later. P3 2.75 — capital 3 Later, schemes 3 Later, lender 2 Skip, market 3 Later. PLI is closed. Lender route Skips. Capital and scheme tools are Later. Venture capital has already found the few primes. P4 3.50 — map 4 Activate, friction 4 Activate, scorecard 2 Skip, compliance 4 Activate. Mapping and friction on who never finishes certification Activate, plus compliance intel. A scorecard of a few dozen firms is Skip. Delivery 4 — The demo exists, so an attachment is plausible even though the firms are scattered. Delivery is 4. Additionality 3 — DGCA and the closed PLI already structure the industry. Catalyst would add file completion only. Additionality is 3.

Corroborating sources. Drone Rules and PLI, 2021, outlay ₹120 crore. PIB, 6 July 2022: 23 beneficiaries, combined sales ₹319 crore in FY2021–22. PIB, 26 July 2024: 48 manufacturing companies, 70 type-certified models, 16,000 remote pilot certificates, 116 training organisations. Brochure, 17 October 2026.

21. Bulk drugs & KSMs / APIs · 2.550 · Watch

Field	Value
ICAM status	New candidate
Cluster-shape fit (not the charter score)	3 — The park and the reactor are the anchor. The MSME ring is thinner than the policy story and is environmentally gated.
Activity and geography	Manufacturing. Hyderabad, Visakhapatnam, Ankleshwar, Vapi and the bulk-drug parks. Plants dominate.
Delivery (1–5)	2
Additionality (1–5)	2
Pillars	P1 3.00; P2 2.25; P3 2.75; P4 3.25
Measurable problem	The incentive and the plot sit with the plant. A centre on the reactor would duplicate PLI.
Tool-level intervention	Map intermediate MSMEs around one park only. Do not staff Kaksha for the PLI applicant.
Outside the charter	Do not open a centre on a bulk-drug plant or run the park.
Recommended action	Watch — mapping and friction only

Activate: Cluster mapping, Readiness & friction research. Later: Credit Ki Kaksha, Rating Ki Kaksha, Digital Dost, Policy & program readiness, Cluster-led payment support, Capital pathways, Policies & support, Lender pathways, Compliance intelligence. Skip: ODR recovery pathway, Business EMI protection, Recovery & repayment outcomes, Market access, Scorecards & dashboards.

Why these scores. P1 3.00 — credit 3 Later, rating 3 Later, digital 3 Later, policy 3 Later. Regulatory files are real and still Later: the firms that hold them are the plants, which are out of cohort. P2 2.25 — payment 3 Later, odr 2 Skip, emi 2 Skip, outcomes 2 Skip. Plant payment terms are not an MSME ODR book this year. ODR and EMI Skip. P3 2.75 — capital 3 Later, schemes 3 Later, lender 3 Later, market 2 Skip. PLI and the park are the anchor’s scheme. Market access Skips so the centre is not pulled into selling intermediates. P4 3.25 — map 4 Activate, friction 4 Activate, scorecard 2 Skip, compliance 3 Later. Mapping and friction on who around the park is actually an MSME Activate. A scorecard does not. Delivery 2 — The vehicle on the ground is the park. A second desk has nowhere to stand that is not the plant. Additionality 2 — PLI and the park authority already run the official relationship.

Corroborating sources. Pharmexcil, 14 June 2025: bulk drugs USD 4.87 billion. PLI Bulk Drugs, 2020. ASI FY25 pharma factories 10.92 lakh persons, parent industry. Drugs and pharmaceuticals exports USD 30.47 billion are the wider basket. Brochure, 17 October 2026.

22. Specialty steel (MSME conversion) · 2.550 · Watch

Field	Value
ICAM status	New candidate
Cluster-shape fit (not the charter score)	3 — Anchors are capital-heavy. The MSME conversion tail is real and scattered, and it is not the PLI unit.
Activity and geography	Manufacturing. Jamshedpur, Hazira, Dolvi and the older rerolling clusters of Bhavnagar, Mandi Gobindgarh and Raipur. The PLI plant and the reroller are not in the same lane.
Delivery (1–5)	2
Additionality (1–5)	2
Pillars	P1 3.00; P2 2.25; P3 2.75; P4 3.25
Measurable problem	The PLI sits on the melt shop. Rerollers do not have a specialty-grade buyer file, and a centre would be mistaken for a steel project.
Tool-level intervention	Map rerollers who already sell a specialty grade. Do not open a centre.
Outside the charter	Do not open a centre on a melt shop or administer PLI Specialty Steel.
Recommended action	Watch — mapping and friction only

Activate: Cluster mapping, Readiness & friction research. Later: Credit Ki Kaksha, Rating Ki Kaksha, Digital Dost, Policy & program readiness, Cluster-led payment support, Capital pathways, Policies & support, Lender pathways, Compliance intelligence. Skip: ODR recovery pathway, Business EMI protection, Recovery & repayment outcomes, Market access, Scorecards & dashboards.

Why these scores. P1 3.00 — credit 3 Later, rating 3 Later, digital 3 Later, policy 3 Later. Readiness is Later. The failure is not a missing classroom; it is the absence of a grade and a buyer. P2 2.25 — payment 3 Later, odr 2 Skip, emi 2 Skip, outcomes 2 Skip. Mill payment cycles are Later. ODR and EMI Skip for a cohort the centre is not opening. P3 2.75 — capital 3 Later, schemes 3 Later, lender 3 Later, market 2 Skip. PLI is the anchor’s scheme. Market access Skips because Catalyst must not become a grade-development consultant to a melt shop. P4 3.25 — map 4 Activate, friction 4 Activate, scorecard 2 Skip, compliance 3 Later. Only mapping and friction Activate, to see whether any reroller is actually in specialty grades. Delivery 2 — No year-1 vehicle that is not the plant. Additionality 2 — The PLI programme and the steel companies already run this.

Corroborating sources. PLI Specialty Steel, 2021. Engineering goods USD 116.67 billion, PIB FY25, are not this cohort. Brochure, 17 October 2026.

23. Space components & small-sat · 2.435 · Watch

Field	Value
ICAM status	New candidate
Cluster-shape fit (not the charter score)	4 — A real component craft exists in two cities, but offtake is still ISRO and a few private primes, and the MSME list is thin.
Activity and geography	Both. Bengaluru and Hyderabad, with a thin scatter in Ahmedabad and Thiruvananthapuram. Not a single lane.
Delivery (1–5)	2
Additionality (1–5)	2
Pillars	P1 2.75; P2 2.00; P3 2.50; P4 3.50
Measurable problem	Component shops do not yet have a private offtake list, so there is no invoice cohort.
Tool-level intervention	Map Bengaluru and Hyderabad job-shops that already machine for ISRO. Stop there this year.
Outside the charter	Do not bid a satellite, seek an IN-SPACe authorisation for the centre, or use HS 8802 as evidence.
Recommended action	Watch — mapping and friction only

Activate: Cluster mapping, Readiness & friction research. Later: Credit Ki Kaksha, Digital Dost, Policy & program readiness, Capital pathways, Policies & support, Compliance intelligence. Skip: Rating Ki Kaksha, Cluster-led payment support, ODR recovery pathway, Business EMI protection, Recovery & repayment outcomes, Lender pathways, Market access, Scorecards & dashboards.

Why these scores. P1 2.75 — credit 3 Later, rating 2 Skip, digital 3 Later, policy 3 Later. Files will matter later. There is no thick tail, so readiness stays Later or Skip. P2 2.00 — payment 2 Skip, odr 2 Skip, emi 2 Skip, outcomes 2 Skip. ISRO milestones are not an MSME receivable book the centre can staff. Receivables tools Skip. P3 2.50 — capital 3 Later, schemes 3 Later, lender 2 Skip, market 2 Skip. IN-SPACe is a gate for the prime, not a scheme for the shop. Capital and scheme tools stay Later; lender and market Skip. P4 3.50 — map 5 Activate, friction 4 Activate, scorecard 2 Skip, compliance 3 Later. Only mapping and friction Activate, to see whether a vendor ring exists before anyone promises a centre. Delivery 2 — No MSME offtake large enough for a year-1 desk. Additionality 2 — ISRO vendor development and IN-SPACe already occupy the official door.

Corroborating sources. IN-SPACe established 2020. HS 8802 is aircraft and is the wrong line (DGCIS quarterly reviews list 8802 among top headings for other reasons). Brochure, 17 October 2026.

24. Geospatial & drones-as-a-service · 2.355 · Watch

Field	Value
ICAM status	New candidate
Cluster-shape fit (not the charter score)	3 — GeM and infrastructure buyers are visible, but the firms are a virtual layer on top of the drone demo, not a second centre.
Activity and geography	Services. Pan-India project work. Firms cluster lightly in Bengaluru, Hyderabad and Delhi. Not a belt.
Delivery (1–5)	2
Additionality (1–5)	2
Pillars	P1 2.75; P2 2.00; P3 2.25; P4 3.25
Measurable problem	Tender payments are slow, and the service firms are too scattered to be a centre distinct from the drone demo.
Tool-level intervention	Map service firms only so they are not double-counted as drone manufacturers. No centre.
Outside the charter	Do not relaunch the drone demonstration cluster under a services name.
Recommended action	Watch — mapping and friction only

Activate: Cluster mapping, Readiness & friction research. Later: Credit Ki Kaksha, Digital Dost, Policy & program readiness, Market access, Compliance intelligence. Skip: Rating Ki Kaksha, Cluster-led payment support, ODR recovery pathway, Business EMI protection, Recovery & repayment outcomes, Capital pathways, Policies & support, Lender pathways, Scorecards & dashboards.

Why these scores. P1 2.75 — credit 3 Later, rating 2 Skip, digital 3 Later, policy 3 Later. Programme files for GeM are Later. There is no thick factory tail. P2 2.00 — payment 2 Skip, odr 2 Skip, emi 2 Skip, outcomes 2 Skip. Government payment delay is real and still Skip for a centre: the firms are not a cluster that can hold a recovery cell. P3 2.25 — capital 2 Skip, schemes 2 Skip, lender 2 Skip, market 3 Later. No sector lender product. Market access to GeM is Later, not a year-1 staffing. P4 3.25 — map 4 Activate, friction 4 Activate, scorecard 2 Skip, compliance 3 Later. Mapping and friction Activate only to keep this row from being merged into the drone demo. Delivery 2 — Chapter 18. Delivery is 2. Additionality 2 — The drone demo, if attached, already covers the aircraft. A second vehicle adds nothing.

Corroborating sources. Geospatial guidelines, 2021. DGCA PIB, 26 July 2024: 16,000 remote pilot certificates are people, not firms. Services have no HSN. Brochure, 17 October 2026.

25. Semiconductors & OSAT ancillaries · 2.345 · Watch

Field	Value
ICAM status	New candidate
Cluster-shape fit (not the charter score)	3 — The plant is the anchor. The ancillary ring a centre would enrol is still thin and has no fab offtake to stand on.
Activity and geography	Manufacturing. Sanand and Dholera in Gujarat, plus the other approved-plant states. No dense MSME belt yet.
Delivery (1–5)	2
Additionality (1–5)	2
Pillars	P1 2.75; P2 2.00; P3 2.00; P4 3.50
Measurable problem	There is no MSME invoice book to repair until a fab offtakes; the register of ancillaries does not exist.
Tool-level intervention	This year, only a map of possible ancillaries around Sanand and Dholera and a friction note on who cannot yet sell. Do not staff Kaksha or ODR.
Outside the charter	Do not build a fab, staff a plant, or treat design-linked winners as a cluster.
Recommended action	Watch — mapping and friction only

Activate: Cluster mapping, Readiness & friction research. Later: Credit Ki Kaksha, Digital Dost, Policy & program readiness, Compliance intelligence. Skip: Rating Ki Kaksha, Cluster-led payment support, ODR recovery pathway, Business EMI protection, Recovery & repayment outcomes, Capital pathways, Policies & support, Lender pathways, Market access, Scorecards & dashboards.

Why these scores. P1 2.75 — credit 3 Later, rating 2 Skip, digital 3 Later, policy 3 Later. Any future ancillary will need files, but there is no thick tail to teach this year, so readiness stays Later or Skip. P2 2.00 — payment 2 Skip, odr 2 Skip, emi 2 Skip, outcomes 2 Skip. No recurring MSME buyer delay to staff. All four receivables tools Skip. P3 2.00 — capital 2 Skip, schemes 2 Skip, lender 2 Skip, market 2 Skip. ISM money is on the plant. It is not a scheme-usability job for a ring that is not selling. P4 3.50 — map 5 Activate, friction 4 Activate, scorecard 2 Skip, compliance 3 Later. Mapping and friction research are the only Activate tools, until the first fab offtake names a vendor list. A scorecard would be empty. Delivery 2 — No MSME offtake and no belt that can hold a centre. Additionality 2 — ISM and the state industrial corporations already run the plant interface.

Corroborating sources. MeitY, September 2025: 1 fab, 8 OSAT/ATMP, 1 compound fab, 23 design-linked applicants. ISM: 10 plants, six states, about ₹1.6 lakh crore committed capex. Brochure, 17 October 2026.

26. AVGC-XR · 2.335 · Watch

Field	Value
ICAM status	New candidate
Cluster-shape fit (not the charter score)	3 — Buyer delays exist, but the cohort is digital and pan-city, not a physical centre.
Activity and geography	Services. Bengaluru, Hyderabad, Mumbai, Pune. Chapter 18 virtual work, with a few studio buildings. Not a factory belt.
Delivery (1–5)	2
Additionality (1–5)	2
Pillars	P1 2.50; P2 2.25; P3 2.25; P4 3.00
Measurable problem	Small studios wait on publisher payments, but the work is not a physical cluster and invoices are often informal.
Tool-level intervention	Map only. Do not open a studio campus or a training college.
Outside the charter	Do not become a delivery college or a production house.
Recommended action	Watch — mapping and friction only

Activate: Cluster mapping, Readiness & friction research. Later: Credit Ki Kaksha, Digital Dost, Cluster-led payment support, Market access. Skip: Rating Ki Kaksha, Policy & program readiness, ODR recovery pathway, Business EMI protection, Recovery & repayment outcomes, Capital pathways, Policies & support, Lender pathways, Scorecards & dashboards, Compliance intelligence.

Why these scores. P1 2.50 — credit 3 Later, rating 2 Skip, digital 3 Later, policy 2 Skip. Readiness is Later at best. There is no public-programme file that is the bottleneck for the bench. P2 2.25 — payment 3 Later, odr 2 Skip, emi 2 Skip, outcomes 2 Skip. Payment delay is Later. ODR and EMI Skip because many engagements have no formal invoice and no bank EMI. P3 2.25 — capital 2 Skip, schemes 2 Skip, lender 2 Skip, market 3 Later. Venture capital does not reach the bench, and there is no lender product the centre can open this year. Tools stay Skip or Later. P4 3.00 — map 4 Activate, friction 4 Activate, scorecard 2 Skip, compliance 2 Skip. Only a map and a friction note on informal contracts Activate. A scorecard would not have a cohort. Delivery 2 — Chapter 18. No year-1 building. Additionality 2 — State AVGC policies and colleges already offer space and courses.

Corroborating sources. AVGC task force, 2022. Services exports USD 383.51 billion, PIB FY25, are the parent account, not this cohort. No HSN. Brochure, 17 October 2026.

27. IT services & GCCs · 2.275 · Watch

Field	Value
ICAM status	Phase II
Cluster-shape fit (not the charter score)	3 — Large, digital, and already a Phase II relationship. No factory cash-cycle cohort.
Activity and geography	Services. Bengaluru, Hyderabad, Pune, NCR, Chennai. Virtual delivery. Chapter 18.
Delivery (1–5)	2
Additionality (1–5)	2
Pillars	P1 2.75; P2 2.00; P3 2.00; P4 3.00
Measurable problem	There is no MSME factory cohort. Treating GCCs as a cluster would crowd out the year-1 five.
Tool-level intervention	Invite GCCs as anchors or members inside a real cluster. Map campus vendors only if a host city asks. No centre.
Outside the charter	Do not open an IT cluster or a GCC park.
Recommended action	Watch — mapping and friction only

Activate: Cluster mapping, Readiness & friction research. Later: Credit Ki Kaksha, Rating Ki Kaksha, Digital Dost. Skip: Policy & program readiness, Cluster-led payment support, ODR recovery pathway, Business EMI protection, Recovery & repayment outcomes, Capital pathways, Policies & support, Lender pathways, Market access, Scorecards & dashboards, Compliance intelligence.

Why these scores. P1 2.75 — credit 3 Later, rating 3 Later, digital 3 Later, policy 2 Skip. Readiness tools are the wrong product for a GCC. They stay Later or Skip. P2 2.00 — payment 2 Skip, odr 2 Skip, emi 2 Skip, outcomes 2 Skip. GCC vendor payment is not a cluster recovery book. Receivables tools Skip. P3 2.00 — capital 2 Skip, schemes 2 Skip, lender 2 Skip, market 2 Skip. No scheme or lender pathway the centre should staff. The sector is a capitalled industry already. P4 3.00 — map 4 Activate, friction 4 Activate, scorecard 2 Skip, compliance 2 Skip. Mapping and a short friction note Activate only to stop this row being proposed as a centre. Delivery 2 — Chapter 18. Delivery is 2. Additionality 2 — Prefer any sibling that has a factory receivable. Additionality of an IT centre is 2.

Corroborating sources. PIB: services exports USD 383.51 billion, FY2024–25. No HSN. Phase II. Brochure, 17 October 2026.

28. Cybersecurity services · 2.200 · Out of charter

Field	Value
ICAM status	New candidate
Cluster-shape fit (not the charter score)	3 — A services market with no physical MSME ring a Capability Centre should enrol.
Activity and geography	Services. Bengaluru, Hyderabad, NCR, Pune. Virtual delivery. No belt.
Delivery (1–5)	2
Additionality (1–5)	1
Pillars	P1 2.50; P2 2.25; P3 2.25; P4 2.75
Measurable problem	There is no factory cash-cycle cohort. The firms are prospective members.
Tool-level intervention	Invite empanelled firms as members inside the five year-1 vehicles. Do not open a cyber cluster.
Outside the charter	Out of cluster charter. Do not staff a security operations centre.
Recommended action	Out of cluster charter — member / partner

Activate: None. Later: Credit Ki Kaksha, Digital Dost, Cluster-led payment support, Market access, Cluster mapping, Readiness & friction research, Compliance intelligence. Skip: Rating Ki Kaksha, Policy & program readiness, ODR recovery pathway, Business EMI protection, Recovery & repayment outcomes, Capital pathways, Policies & support, Lender pathways, Scorecards & dashboards.

Why these scores. P1 2.50 — credit 3 Later, rating 2 Skip, digital 3 Later, policy 2 Skip. A file clinic is not the failure mode. Tools stay Later or Skip. P2 2.25 — payment 3 Later, odr 2 Skip, emi 2 Skip, outcomes 2 Skip. Client payment delays exist and still do not justify a recovery cell for a virtual, member-type cohort. P3 2.25 — capital 2 Skip, schemes 2 Skip, lender 2 Skip, market 3 Later. No sector scheme whose usability is Catalyst's job. These firms sell to the banks the centre would otherwise convene. P4 2.75 — map 3 Later, friction 3 Later, scorecard 2 Skip, compliance 3 Later. Mapping would only produce a membership list. It is Later, not a centre. Delivery 2 — No physical cohort. Additionality 1 — The type is a delivery partner. Additionality of a centre is 1. Forced out of charter.

Corroborating sources. CERT-In directions, 2022. Services exports USD 383.51 billion, PIB FY25, are not this cohort. Brochure, 17 October 2026. Forced out of charter regardless of the arithmetic.

29. Education technology & skilling · 2.195 · Out of charter

Field	Value
ICAM status	Phase II
Cluster-shape fit (not the charter score)	3 — A delivery partner for apprenticeship inside a real cluster, not a cluster of its own.
Activity and geography	Services. Pan-India and online. No belt.
Delivery (1–5)	2
Additionality (1–5)	1
Pillars	P1 2.75; P2 2.00; P3 2.50; P4 2.50
Measurable problem	Training partners are how a centre delivers apprenticeships. They are not themselves the MSME cohort.
Tool-level intervention	Use colleges and training partners inside the five year-1 vehicles. Do not score them as a sixth cluster.
Outside the charter	Out of cluster charter. Do not open an edtech cluster or finance a college.
Recommended action	Out of cluster charter — delivery partner

Activate: None. Later: Credit Ki Kaksha, Digital Dost, Policy & program readiness, Policies & support, Market access, Cluster mapping, Readiness & friction research. Skip: Rating Ki Kaksha, Cluster-led payment support, ODR recovery pathway, Business EMI protection, Recovery & repayment outcomes, Capital pathways, Lender pathways, Scorecards & dashboards, Compliance intelligence.

Why these scores. P1 2.75 — credit 3 Later, rating 2 Skip, digital 3 Later, policy 3 Later. The brochure's academic and apprenticeship function uses these partners. It does not enrol them as the cohort. Readiness tools stay Later or Skip. P2 2.00 — payment 2 Skip, odr 2 Skip, emi 2 Skip, outcomes 2 Skip. Outcome-payment delays are not the factory receivable the charter is built for. Receivables tools Skip. P3 2.50 — capital 2 Skip, schemes 3 Later, lender 2 Skip, market 3 Later. Scheme training contracts are Later at most. The centre must not become a placement agency. P4 2.50 — map 3 Later, friction 3 Later, scorecard 2 Skip, compliance 2 Skip. A map of partners is an operating list for the five vehicles, not a cluster scorecard. Delivery 2 — No belt. Additionality 1 — The type is the delivery partner. Additionality of a centre on edtech is 1. Forced out of charter.

Corroborating sources. Skill and apprenticeship programmes; remote-learning wave from 2020. Services account USD 383.51 billion, PIB FY25, is not this cohort. Brochure, 17 October 2026. Forced out of charter.

30. Fintech & BC-agent networks · 1.700 · Out of charter

Field	Value
ICAM status	Phase II
Cluster-shape fit (not the charter score)	3 — A delivery and capital rail for the five centres, not a cohort.
Activity and geography	Services. Pan-India agents. Firms in Mumbai, Bengaluru and NCR. No factory belt.
Delivery (1–5)	1
Additionality (1–5)	1
Pillars	P1 2.25; P2 1.50; P3 2.00; P4 2.25
Measurable problem	There is no borrowing cohort. Opening a fintech cluster would put the lender in the borrower's seat.
Tool-level intervention	Invite regulated lenders and BC networks as members inside the five vehicles. No centre.
Outside the charter	Out of cluster charter. Do not allocate leads, rank lenders, or create a fintech cluster.
Recommended action	Out of cluster charter — member / partner

Activate: None. Later: Digital Dost, Cluster mapping. Skip: Credit Ki Kaksha, Rating Ki Kaksha, Policy & program readiness, Cluster-led payment support, ODR recovery pathway, Business EMI protection, Recovery & repayment outcomes, Capital pathways, Policies & support, Lender pathways, Market access, Readiness & friction research, Scorecards & dashboards, Compliance intelligence.

Why these scores. P1 2.25 — credit 2 Skip, rating 2 Skip, digital 3 Later, policy 2 Skip. Credit Kaksha is something these firms might help deliver. It is not a service they need as a cluster. Tools Skip or Later. P2 1.50 — payment 2 Skip, odr 1 Skip, emi 1 Skip, outcomes 2 Skip. ODR and EMI Skip. A lender's collection book is not the charter's recovery cell. P3 2.00 — capital 2 Skip, schemes 2 Skip, lender 2 Skip, market 2 Skip. Capital pathways are what the member provides after a file exists. The centre does not build that market as a cohort. P4 2.25 — map 3 Later, friction 2 Skip, scorecard 2 Skip, compliance 2 Skip. A map of willing member lenders is an operating list, Later, not a cluster study. Delivery 1 — No cluster vehicle. Additionality 1 — The type is a capital provider. Additionality of a centre is 1. Forced out of charter.

Corroborating sources. Account Aggregator, 2021. BC and NBFC-MFI frameworks. No HSN. Brochure, 17 October 2026: the platform does not lend or route MSMEs to a preferred lender. Forced out of charter.

31. Green hydrogen ancillaries · 1.690 · Out of charter

Field	Value
ICAM status	New candidate
Cluster-shape fit (not the charter score)	3 — Capital-heavy anchors. No MSME buyer book and no belt a centre could open.
Activity and geography	Manufacturing. Coastal and refinery states where sponsors have announced plants. Pan-India announcements, no MSME belt.
Delivery (1–5)	1
Additionality (1–5)	1
Pillars	P1 2.00; P2 1.50; P3 2.00; P4 2.50
Measurable problem	There is no MSME invoice or file cohort. The mission funds plants.
Tool-level intervention	None in year 1. An optional one-page map of announced plants is the most the charter allows.
Outside the charter	Do not open a centre, staff an electrolyser plant, or treat the sponsor as an anchor for a cohort that does not exist.
Recommended action	Out of cluster charter — anchor, not cohort

Activate: None. Later: Cluster mapping, Readiness & friction research. Skip: Credit Ki Kaksha, Rating Ki Kaksha, Digital Dost, Policy & program readiness, Cluster-led payment support, ODR recovery pathway, Business EMI protection, Recovery & repayment outcomes, Capital pathways, Policies & support, Lender pathways, Market access, Scorecards & dashboards, Compliance intelligence.

Why these scores. P1 2.00 — credit 2 Skip, rating 2 Skip, digital 2 Skip, policy 2 Skip. No micro or small tail to teach. Readiness tools Skip. P2 1.50 — payment 2 Skip, odr 1 Skip, emi 1 Skip, outcomes 2 Skip. No MSME receivable. ODR and EMI Skip. P3 2.00 — capital 2 Skip, schemes 2 Skip, lender 2 Skip, market 2 Skip. Capital pathways belong to the sponsor. They are out of the charter for a centre. P4 2.50 — map 3 Later, friction 3 Later, scorecard 2 Skip, compliance 2 Skip. A map of plants could be done later as a one-pager. It is not staffed. Friction research has nothing to drop out of yet. Delivery 1 — No cluster vehicle. Additionality 1 — The mission and the sponsors are the programme. Catalyst would add a second announcement, not a tool.

Corroborating sources. National Green Hydrogen Mission, 2023. No MSME vendor census in the releases used. Brochure, 17 October 2026.

3. Recommendation: five clusters to pick

Pick is not rank. Rank says how badly the charter is needed. Pick says where one year of centre capacity goes. The rule is: start from the highest need scores, then choose the delivery form the brochure allows. A new Capability Centre is opened only where no ICAM vehicle exists. An attachment is used where a demonstration or an annex is already designed.

Food (4.350) and pack, BMS and recycling (4.360) are the close pair. Food is the attachment. Pack and BMS is the new centre. White goods is fifth on need and is still inside the five because the annex can take the work. Logistics and toys remain High and stay in reserve.

Pick	Cluster	Need (rank)	Form	Where	Charter emphasis
1	Medical devices	4.835 (rank 1)	New Capability Centre	AMTZ Visakhapatnam spoke, or Greater Noida / Kanchipuram. One belt.	Licence and lender files, hospital and PSU recovery files, CDSCO compliance intelligence.
2	Footwear (non-leather and sports)	4.745 (rank 2)	New Capability Centre	Ambur–Ranipet, or Agra. One belt.	Focus Product Scheme and CLE files, the lender route, and brand ODR.
3	Food processing (PLI wave)	4.350 (rank 4)	Attach to the existing food demonstration	Inside the food demo. No second park.	Retail and quick-commerce payment cell, FPO Credit Kaksha, unused-scheme desk.
4	ACC pack, BMS and recycling	4.360 (rank 3)	New Capability Centre	The MSME pack, BMS and recycling ring. Not the PLI-ACC plants.	Map the ring, OEM goods-receipt receivables, working capital matched to cell-to-pack.
5	White goods and furniture	4.165 (rank 5)	Attach to the existing annex	Noida–Hapur annex, about 4,500 MSMEs.	Brand goods-receipt ODR, and BIS Rating Kaksha, on the annex buyer panel.

Year-1 slate at a glance: three new centres (medical devices, footwear, pack and BMS) and two attachments (food, white goods).

Pick 1. Medical devices

Field	Value
Need and rank	4.835, rank 1, tier High
ICAM status	New candidate
Delivery form	New Capability Centre
Where	AMTZ Visakhapatnam spoke, or the Greater Noida / Kanchipuram licensed-site belt. Pick one belt in the first month. Do not staff both.
Geography on the register	AMTZ Visakhapatnam spoke; Greater Noida and the Kanchipuram licensed-site belt; other parks in Madhya Pradesh and Tamil Nadu. State split of the 4,000 sites is not published.
Participants	About 700 manufacturers (CII/IBEF). Separately, about 4,000 CDSCO licensed manufacturing sites. These units are not added together.
FY2024–25 export	USD 4.02 billion, FY2024–25, EPCMD / DGCIS medtech basket (PIB segment total USD 4,014 million is the same release rounded).
HS-4	9018, 9019, 9021, 9022. IVD reagents often sit in 3822 or 3002. EPCMD's $4.02 bn is its medtech basket, not a proved sum of these headings.
Why this pick	This is the highest charter need, and there is no ICAM vehicle to attach to. Every tool is Activate. The cohort is the licensed MSME device maker, not the hospital and not the PLI principal. The 700 manufacturers and the 4,000 licensed sites stay as two populations.
Measurable problem	Hospital, PSU and OEM payables run long, and most of the ~700 manufacturers fail CDSCO, BIS and lender files.
Outside the charter	Do not finance park buildings, run the PLI plant, or become a notified body.

Activate: Credit Ki Kaksha, Rating Ki Kaksha, Digital Dost, Policy & program readiness, Cluster-led payment support, ODR recovery pathway, Business EMI protection, Recovery & repayment outcomes, Capital pathways, Policies & support, Lender pathways, Market access, Cluster mapping, Readiness & friction research, Compliance intelligence. Later: Scorecards & dashboards. Skip: None.

First 90 days.

- Days 1–30. Choose the belt. Build the working list from licensed MSME sites in that belt only. Keep the CII figure of about 700 manufacturers and the CDSCO figure of about 4,000 sites in separate columns.
- Days 31–60. Stand up the lender file: Credit Kaksha on the cash cycle, Rating Kaksha on the quality-system papers a buyer asks for, and Digital Dost on a complete CDSCO and bank pack. Policy readiness covers the park and PLI windows that actually apply to an MSME, and says clearly which windows do not.
- Days 61–90. Open the payment and recovery file for hospital and PSU buyers where the MSME holds the invoice. Prepare cases. Do not run the ODR platform and do not allocate leads. Write the EMI note as an explore. Compliance intelligence lists the licence conditions that a statute will not clear for the firm.

Pick 2. Footwear (non-leather + sports)

Field	Value
Need and rank	4.745, rank 2, tier High
ICAM status	New candidate
Delivery form	New Capability Centre
Where	Ambur–Ranipet, or Agra. Pick one belt. The other belt is a later spoke, not a second centre.
Geography on the register	Ambur–Ranipet in Tamil Nadu, and Agra. Other CLE belts exist; year-1 is one of these two.
Participants	About 15,000 footwear units (CLE/IBEF). CLE membership is 2,868 and is a different population. Do not add them.
FY2024–25 export	CLE/IBEF: leather, footwear and leather goods exports ₹48,667 crore in FY2024–25. That basket is wider than this cohort.
HS-4	6402, 6403, 6404, 6405. CLE's published export is leather plus footwear plus goods, wider than non-leather footwear.
Why this pick	Footwear is second because the scheme file and the bank file are as important as the brand dispute. The Focus Product Scheme dies when a sanction is not followed through. Footwear is not on the demonstration list and not on the named Phase II list, so the form is a new centre. The cohort is the footwear unit, about 15,000, not the 2,868 CLE members.
Measurable problem	Brand and export-house goods-receipt delays, and credit-linked footwear files that die at bank sanction.
Outside the charter	Do not build a footwear park or route units to a preferred lender.

Activate: Credit Ki Kaksha, Rating Ki Kaksha, Digital Dost, Policy & program readiness, Cluster-led payment support, ODR recovery pathway, Business EMI protection, Recovery & repayment outcomes, Capital pathways, Policies & support, Lender pathways, Market access, Cluster mapping, Readiness & friction research, Scorecards & dashboards, Compliance intelligence. Later: None. Skip: None.

First 90 days.

- Days 1–30. Choose Ambur–Ranipet or Agra with the state association. Write down the unit universe and the CLE member list as different counts. Do not treat members as the census.
- Days 31–60. Make the Focus Product Scheme and the related CLE instruments usable: eligibility, the papers, and the lender route after a sanction so the approval does not stop at the letter.
- Days 61–90. Payment cell and ODR case preparation for brand goods-receipt delays, limited to micro and small units that hold a formal invoice. Rating Kaksha on the buyer's quality file. EMI remains an explore.

Pick 3. Food processing (PLI wave)

Field	Value
Need and rank	4.350, rank 4, tier High
ICAM status	Demo
Delivery form	Attach to the existing food demonstration
Where	Inside the food demonstration that ICAM already designed. No second park and no new nodal agency.
Geography on the register	The demo belt, not all 726 ODOP districts. Registered factories in ASI 2022–23 concentrate in Andhra Pradesh (12.68%), Tamil Nadu (11.67%), Telangana (8.65%), Punjab (8.08%) and Maharashtra (6.59%). The attachment uses the belt the demo already chose.
Participants	PLI food: 70 MSMEs directly enrolled and 40 contract manufacturers, inside a beneficiary sales figure that is mostly large firms. PMFME, 31 December 2025: 1,72,707 micro enterprises approved and 59,202 formalised. ASI 2022–23: 42,801 registered food-processing factories. These populations are not added.
FY2024–25 export	n.p. as a single FY2024–25 processed-food level in the MoFPI table consulted, which ends at USD 10,881.81 million of processed-food exports in FY2023–24. The FY25 share of processed food in agri-exports was stated at 20.4% without a level this register will back-calculate.
HS-4	Not one heading. NIC division 10. DGCIS cereal preparations were USD 3.1 billion in FY2024–25 and are only one slice. Do not use them as processed-food exports.
Why this pick	Food's need is 4.350, a tenth behind pack and BMS. The demonstration already exists, so year-1 capacity attaches instead of opening a centre. The measurable gap is public: 1,72,707 PMFME approvals and 59,202 formalised, as on 31 December 2025. The payment job is the retail and quick-commerce invoice, which is a different cash cycle from a kitchen that has never invoiced.
Measurable problem	Retail and quick-commerce payments, and PMFME or FPO files that stall, inside a demo that already exists.
Outside the charter	Do not run PLI food, build a mega food park, or replace the state nodal agency.

Activate: Credit Ki Kaksha, Rating Ki Kaksha, Digital Dost, Policy & program readiness, Cluster-led payment support, ODR recovery pathway, Business EMI protection, Recovery & repayment outcomes, Capital pathways, Policies & support, Lender pathways, Market access, Cluster mapping, Readiness & friction research, Scorecards & dashboards, Compliance intelligence. Later: None. Skip: None.

First 90 days.

- Days 1–30. Sit in the existing demo. Take the approval-to-formalisation gap as the friction list. Do not build a parallel helpdesk to the state nodal agency.
- Days 31–60. Credit Kaksha for the FPO and the micro unit that has a buyer, and a scheme desk that tells a unit which of PMFME and PLI food actually applies. PLI food is not the micro unit's scheme.
- Days 61–90. Payment cell only for units that invoice retail or quick commerce. Case preparation for those receivables. Leave units with no formal invoice on the formalisation desk.

Pick 4. ACC pack, BMS & recycling

Field	Value
Need and rank	4.360, rank 3, tier High

Field	Value
ICAM status	New candidate
Delivery form	New Capability Centre
Where	The MSME ring that packs cells, builds battery-management systems and recycles. Not the PLI-ACC cell plants.
Geography on the register	Wherever the awarded cell plants sit, plus existing pack shops in the Pune, NCR and southern auto-electronics belts. The ring is not the plant campus.
Participants	A handful of PLI-ACC plants (public awards are on the order of four principal beneficiaries). Pack and BMS MSMEs are not in that list and are not counted here as plants.
FY2024–25 export	n.p. for ACC packs. Do not substitute the 8507 line.
HS-4	Do not use 8507 as this cohort's export. 8507 is mostly lead-acid. ACC cells and packs are an 8-digit distinction this desk did not pull.
Why this pick	Need is 4.360 and additionality is 5. The cell plants are anchors with their own incentive. The charter gap is the ring around them: mapping who is real, matching working capital to the cell-to-pack cycle, and preparing OEM goods-receipt cases. HS 8507 is not this industry's export story and is not used.
Measurable problem	OEM goods-receipt cycles strand working capital in the pack and BMS shop, and the ring around the cell plants is unmapped.
Outside the charter	Do not run a PLI-ACC plant or treat the four beneficiaries as the cohort.

Activate: Credit Ki Kaksha, Rating Ki Kaksha, Digital Dost, Policy & program readiness, Cluster-led payment support, ODR recovery pathway, Business EMI protection, Recovery & repayment outcomes, Capital pathways, Policies & support, Lender pathways, Market access, Cluster mapping, Readiness & friction research, Scorecards & dashboards. Later: Compliance intelligence. Skip: None.

First 90 days.

- Days 1–30. Map pack, BMS and recycling MSMEs in the belts that actually supply the plants. Put the awarded cell plants in a separate anchor column and leave them out of the cohort.
- Days 31–60. Working-capital pathway matched to the cell-to-pack cycle, and the lender file that follows. Scheme usability for the instruments an MSME packer can actually file.
- Days 61–90. Payment cell and ODR case preparation on OEM goods-receipt delays. Compliance intelligence on waste and recycling authorisations for the recycling side of the ring. Do not brief a TradeStat 8507 number as ACC exports.

Pick 5. White goods & furniture

Field	Value
Need and rank	4.165, rank 5, tier High
ICAM status	Demo
Delivery form	Attach to the existing annex
Where	The Noida–Hapur annex, about 4,500 MSMEs, and the buyer panel that annex already has.
Geography on the register	Noida–Hapur annex, about 4,500 MSMEs. Other white-goods plants sit in the south and west and are not this annex.
Participants	84 PLI White Goods companies. The Noida–Hapur annex is described at about 4,500 MSMEs. Those are the cohort. The 84 are not added to the 4,500.
FY2024–25 export	n.p. for the annex. Engineering goods USD 116.67 billion are too wide. Domestic brand offtake is the buyer.
HS-4	8415, 9403, 8539 and related. A single FY25 export line for this annex was not separated from engineering goods.
Why this pick	White goods is fifth, at 4.165, still above logistics and toys. The demonstration and the annex exist, so the form is an attachment. The work is BIS and energy-rating discipline, and brand goods-receipt delay. Relaunching the demonstration as a new discovery would ignore the annex.
Measurable problem	Brand goods-receipt delays, and BIS energy-rating or quality files, inside an annex of about 4,500 MSMEs.
Outside the charter	Do not administer PLI White Goods or build another industrial estate.

Activate: Credit Ki Kaksha, Rating Ki Kaksha, Digital Dost, Cluster-led payment support, ODR recovery pathway, Business EMI protection, Recovery & repayment outcomes, Capital pathways, Policies & support, Lender pathways, Cluster

mapping, Readiness & friction research. Later: Policy & program readiness, Market access, Scorecards & dashboards, Compliance intelligence. Skip: None.

First 90 days.

- Days 1–30. Use the annex list. Separate the 84 PLI White Goods companies from the MSME cohort of about 4,500. Confirm which of the 4,500 invoice a brand.
- Days 31–60. Rating Kaksha on BIS and energy-rating files. Credit Kaksha and Digital Dost so the rating file and the bank file are the same pack.
- Days 61–90. Payment cell and ODR case preparation on brand goods-receipts, using the annex buyer panel. Do not administer PLI White Goods and do not plan another industrial estate.

What not to pick in year 1

- No centre on a green-hydrogen plant, a bulk-drug or API plant, a semiconductor fab, or a specialty-steel melt shop. Those are anchors. A one-page map is the most they get.
- No fintech, edtech or cybersecurity cluster. Invite firms from those types in as members or delivery partners of the five vehicles.
- Do not relaunch the five demonstration sectors, or the named Phase II list, as new discoveries. Food and white goods are inside the five only as attachments.
- E-waste, nutraceuticals and electronics components are the next mapping and Phase II wave. E-waste does not get an ODR cell until the unit is formal.
- Semiconductor ancillaries get mapping and friction research around Sanand and Dholera, and nothing else, until a fab offtake is real.
- Logistics (the Bhiwandi annex) and toys (the Koppal hub and the artisan spokes) are High-need reserves. They become centres only if a sixth slot is funded.
